# Clamping sleeves with Pin-Lock

APC clamping sleeve with mechanical pull-out protection

The Albrecht precision clamping sleeve with pull-out protection makes it possible to hold tool shanks with Weldon clamping surfaces positive-locking in the clamping sleeve in line with DIN 1835-B and DIN 6535-HB. The pull-out protection supports the clamping force of the clamping sleeve.

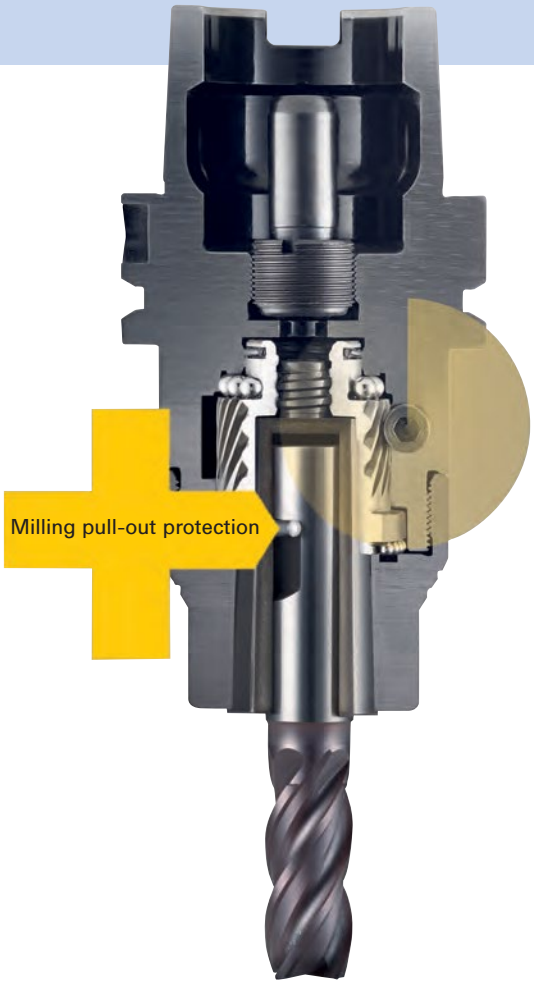
All positive features of the APC precision clamping chuck like concentricity and damping remain without limitation. Special coating.
Fully maintenance-free.

Central = for tools with internal coolant supply. 100 % sealed up to 100 bar coolant pressure.
Periphery = additional coolant and rinse effect.

Increases process capability.

Available individually or as pin lock set (adapter sleeve with safety pin, 3 replacement pins, splint driver and torque wrench).

ALBRECHT
Precision Chucks



DIN 69871

## Precision chuck APC

**Design:** Highest clamping force due to integrated screw gearing. Extremely high vibration damping. Quick tool change occurs laterally by means of hexagonal wrench. Maintenance free, sealed against coolant and dirt.

Balancing quality: G2.5 20000 $min^{-1}$.
Concentricity: ≤ 0.003 mm (for 2.5 x D).

**Application:** For heavy-duty machining as well as HSC and HPC processing. For clamping cylindrical shanks in accordance with DIN 1835 A, B and DIN 6535 HA, HB and HE to D = 20 mm.

## Combi shell end mill arbour NEW

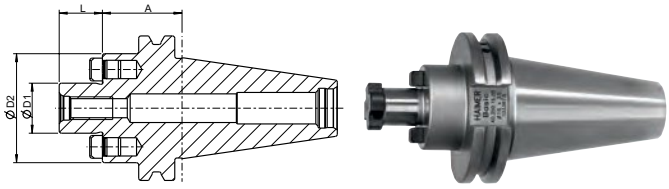
**Design: DIN 69871, Form AD,** made of alloy case-hardened steel. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G6.3 8000 min$^{-1}$.
Concentricity: < 0.003 mm.
Hardened 60 -2 HRC.

**Application:** To mount cutter heads and milling cutters with cross groove.

DIN 69871 | Form AD | G 6.3 8.000 | ≤ 6 µm

**Scope of delivery:** Milling head mounting complete with cutter retaining screw.



| Order No. | Ø D1 mm | 3704 HAIMER | SK | Ø D2 mm | L mm | A mm |

## Precision combi mount-on milling die

**Design: DIN 69871, Form AD/B,** precision balanced. Made of alloy case-hardened steel, with a core tensile strength of min. approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper to DIN 254. With transverse and longitudinal grooves. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control.

Taper tolerance: AT3.
Balancing quality: G2.5 22000 min⁻¹.
Concentricity: < 0.006 mm.
Hardened 60 -2 HRC.

**Application:** For clamping shell end mills DIN 841 and DIN 1880 as well as single angle milling cutters DIN 842 and milling heads DIN 1830.

**Scope of delivery:** Shell end mill arbour complete with cutter retaining screw, driving ring and feather key.

## CNC short drill chuck for clockwise and anti-clockwise rotation

**Design: DIN 69871, Form AD/B.** Made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254.
Clamping using a hex spanner essentially increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during left-handed rotation or being quickly decelerated from higher speeds.

Taper angle: Tolerance AT3.
Concentricity: < 0.03 mm.
Hardened 58 ±2 HRC.

**Application:** To nest tools with cylindrical shank.

**Scope of delivery:** Short drill chuck with hex spanner.

DIN 69871 | Form AD/B | ≤ 30 µm

## CNC short drill chuck for clockwise and anti-clockwise rotation

DIN 69871 | Form AD | ≤ 30 µm

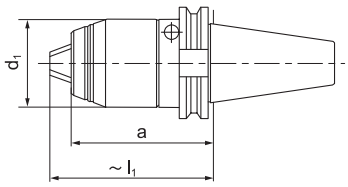
format professional quality

**Design:** Short model, guide elements of rigid design, hardened and ground wearing parts for a long life span. Compact design and high rigidity result in best machining results. High clamping forces are reached by the integrated worm gear at low effort,
**Holding torque > 75 Nm at 13 mm diameter.** Machining is safe thanks to automatic blocking of the worm gear even when running anti-clockwise and quickly decelerated spindle.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: pre-balanced up to 7000 $min^{-1}$ at a residual imbalance of max. 40 gmm.
Concentricity: 0.03 mm.
Max. permissible speed: 7000 $min^{-1}$.

**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

**Scope of delivery:** Short drill chuck with hex spanner.



| Order No. | Clamping range mm | 3525 format | SK | ~L1 mm | $d_1$ mm |

## CNC short drill chuck AKL for clockwise and anti-clockwise rotation

DIN 69871 | Form AD | G 2.5 20.000 | ≤ 30 µm

ALBRECHT Precision Chucks

**Design: DIN 69871, Form AD.** Short design, guide elements of rigid design, hardened and ground wear parts ensure high concentricity and long life. 100 % concentricity test with different plug gauge diameters at various measuring points, based on DIN ISO 10888. Compact design and high rigidity result in best machining results. High clamping forces are reached by the integrated worm gear at low effort, **Holding torque > 75 Nm at 13 mm diameter.** Machining is safe thanks to automatic blocking of the worm gear even when running anti-clockwise and quickly decelerated spindle.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G2.5 20000 $min^{-1}$.
Concentricity: < 0.03 mm.

**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

**Scope of delivery:** Short drill chuck with hex spanner.

**Note:** Higher speeds possible with special balancing.
ULTRA design (concentricity ≤ 0.015 mm) available upon request.

## CNC precision chuck for clockwise and anti-clockwise rotation

**Design: DIN 69871, Form AD/B.** Short design with **central coolant supply,** modular design. Taper to DIN 254. Clamping (using a hex spanner) considerably increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during anti-clockwise rotation or being quickly decelerated from higher speeds.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G6.3 25000 min$^{-1}$.
Concentricity: 0.02 mm.

**Application:** To nest tools with a cylindrical shank with internal cooling.

DIN 69871 | Form AD/B | G 6.3 25.000 | ≤ 20 µm

WTE MAPAL GROUP

**Scope of delivery:** Short drill chuck with hex spanner incl. sealing disc for coolant drill bits with 3-6 mm Ø.

## Combi shell end mill arbour

**Design: DIN 2080, Form A,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Concentricity: SK 40 = 0.01 mm, SK 50 = 0.015 mm.
Hardened 58 ±2 HRC.

**Application:** For mounting tools with longitudinal and cross groove.

**Scope of delivery:** Combi shell end mill arbour complete with cutter retaining screw, driving ring and feather key.

## CNC chuck for clockwise and anti-clockwise rotation

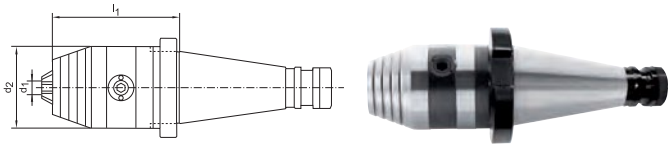
**Design: DIN 2080, Form A,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254. Clamping using a hex spanner considerably increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during anti-clockwise rotation or being quickly decelerated from higher speeds.

Taper angle: AT3.
Concentricity: ≤ 0,03 mm.
Hardened 58 ±2 HRC.

DIN 2080 | Form A | ≤ 30 µm

**Application:** To nest tools with cylindrical shank.

**Scope of delivery:** Short drill chuck with hex spanner.



| Order No. | Clamping range $d_1$ mm | 3522 | SK | $d_2$ mm | $l_1$ mm |
|---|---|---|---|---|---|
| 0001 | 1.5–16 | 191.50 (W360) | 40 | 50 | 95 |

## CNC short drill chuck for clockwise and anti-clockwise rotation

**Design:** Short design, guide elements of rigid design, hardened and ground wear parts ensure high concentricity and long life. Compact design and high rigidity lead to the best machining results. High clamping forces are reached by the integrated worm gear at low effort, **Holding torque > 75 Nm at 13 mm diameter.** Machining is safe thanks to automatic blocking of the worm gear even when running anti-clockwise and quickly decelerated spindle.

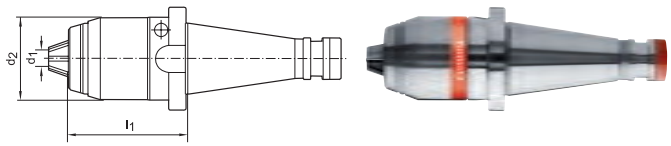
Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: pre-balanced up to 7000 $min^{-1}$ at a residual imbalance of max. 40 gmm.
Concentricity: < 0.03 mm.
Max. permissible speed: 7000 $min^{-1}$.

DIN 2080 | Form A | ≤ 30 µm

format professional quality

**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

**Scope of delivery:** Short drill chuck with hex spanner.



| Order No. | Clamping range $d_1$ mm | 3522 format | SK | $l_1$ mm | $d_2$ mm |
|---|---|---|---|---|---|
| 0101 | 1–16 | 219.00 (W324) | 40 | 73 | 50 |

## CNC precision chuck for clockwise and anti-clockwise rotation

**Design: DIN 2080, Form A,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254. Short design, chuck and shank in one piece. Clamping (using a hex spanner) considerably increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during anti-clockwise rotation or being quickly decelerated from higher speeds.

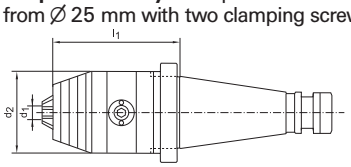
Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Bore tolerance: H5.
Balancing quality: G6.3 7000 min$^{-1}$.
Concentricity: 0.02 mm.
Hardened 58 ±2 HRC.

DIN 2080 | Form A | G 6.3 25.000 | ≤ 20 µm

WTE MAPAL GROUP

**Application:** To nest tools with cylindrical shank and lateral driving plane in accordance with DIN 1835-B and DIN 6353 HB.

**Scope of delivery:** CNC precision chuck with integrated clamping screw, from ∅ 25 mm with two clamping screws.



| Order No. | Clamping range $d_1$ mm | 3531 WTE | SK | $d_2$ mm | $l_1$ mm |

## Collet chuck type ER

NEW

**Design: JIS B 6339 (MAS-BT), Form AD,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G2.5 18000 min⁻¹.
Concentricity: < 0.01 mm.
Hardened 58 ±2 HRC.

**Application:** To nest tools with cylindrical shank in collets to DIN 6499 (ER).

**Scope of delivery:** Collet chuck complete with clamping chuck.

## Precision spacer sleeve

**Design: JIS B 6339 (MAS-BT), Form AD,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Bore tolerance: H5.
Balancing quality: G6.3 8000 min$^{-1}$.
Hardened 60 -2 HRC.

**Application:** To nest tools with Morse taper shank and **tangs.**

## CNC short drill chuck

**Design:** Short design, guide elements of rigid design, hardened and ground wear parts ensure high concentricity and long life. Compact design and high rigidity lead to the best machining results. High clamping forces are reached by the integrated worm gear at low effort, **Holding torque > 75 Nm at 13 mm diameter.** Machining is safe thanks to automatic blocking of the worm gear even when running anti-clockwise and quickly decelerated spindle.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: pre-balanced up to 7000 $min^{-1}$ at a residual imbalance of max. 40 gmm.
Concentricity: < 0.03 mm.
Max. permissible speed: 7000 $min^{-1}$.

**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

JIS B 6339 MAS/BT | Form AD | ≤ 30 µm

format professional quality

**Scope of delivery:** Short drill chuck with hex spanner.

## CNC precision short drill chuck AKL for clockwise and anti-clockwise rotation

**Design: JIS B 6339 (MAS-BT), Form AD**. Short design, guide elements of rigid design, hardened and ground wear parts ensure high concentricity and long life. 100 % concentricity test with different plug gauge diameters at various measuring points, based on DIN ISO 10888. Compact design and high rigidity result in best machining results. High clamping forces are reached by the integrated worm gear at low effort, **Holding torque > 75 Nm at 13 mm diameter.** Machining is safe thanks to automatic blocking of the worm gear even when running anti-clockwise and quickly decelerated spindle.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G2.5 20000 $min^{-1}$.
Concentricity: 0.03 mm.

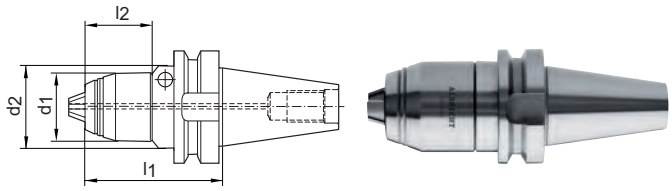
**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

JIS B 6339 MAS/BT | Form AD | G 2.5 20.000 | ≤ 30 µm

ALBRECHT Precision Chucks

**Scope of delivery:** Short drill chuck with hex spanner.

**Note:** Higher speeds possible with special balancing. Also available as ULTRA design (concentricity ≤ 0.015 mm).



| Order No. | Clamping range mm | 3486 ALBRECHT | BT | $l_1$ mm | $l_2$ mm | $d_1$ mm | $d_2$ mm |

## CNC precision short drill chuck for clockwise and anti-clockwise rotation

**Design: JIS B 6339 (MAS-BT), Form AD/B,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254. **Short design with central coolant supply,** chuck and shank in one piece. Clamping (using a hex spanner) essentially increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during left-handed rotation or being quickly decelerated from higher speeds. Sealing disc in chuck for inner coolant drills.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G6.3 25000 $min^{-1}$.
Concentricity: 0.02 mm.
Hardened 58 ±2 HRC.

**Application:** To nest tools with a cylindrical shank with internal cooling.

JIS B 6339 MAS/BT | Form AD/B | G 6.3 25.000 | ≤ 20 µm

## Miniature collet chuck for ER collets

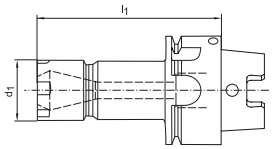
**Design: DIN 69893, Form A,** made of special case-hardened steel for highly stressed components, with a core tensile strength of min. 1000 N/mm². High repeat accuracy when changing tools. Fixed axial positioning through flange contact surface.

DIN 69893 | Form A | G 6.3 12.000 | ≤ 3 µm

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G6.3 12000 min⁻¹.
Concentricity: < 0.003 mm.
Hardened 58 ±2 HRC.

**Application:** To nest tools with cylindrical shank in collets to DIN 6499 (ER).

**Scope of delivery:** Collet chuck complete with clamping nut.



| Order No. | Clamping range mm | 3729 | $d_1$ mm | $l_1$ mm | Collet |

## Precision HG chuck

**Design: DIN 69893, Form A,** precision balanced. Made of special case-hardened steel for highly stressed components, with a core tensile strength of min. 1000 N/mm². **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control. More precise than DIN.

DIN 69893 | Form A | G 2.5 25.000 | ≤ 3 µm

HAIMER

Shank tolerance: h6.
Balancing quality: G2.5 25000 min⁻¹.
Concentricity: < 0.003 mm on the tool (3 x d).
Hardened 58 -2 HRC.

**Application:** For high-precision clamping of tools with cylindrical shank, also with clamping surfaces. Very well suited for high-speed machining.

**Scope of delivery:** HG clamping chuck with clamping screw and pull-out hook.

## Precision chuck APC

**Design:** Highest clamping force due to integrated screw gearing. Quick tool change occurs laterally by means of hexagonal wrench. Maintenance free, sealed against coolant and dirt.

Concentricity: ≤ 0.003 mm (for 2.5 x D).

**Application:** For heavy-duty machining as well as HSC and HPC processing. For clamping cylindrical shanks in accordance with DIN 1835 A, B and DIN 6535 HA, HB and HE to D = 20 mm.

DIN 69893 | Form A | G 2.5 | 20.000 | ≤ 3 µm

## CNC short drill chuck for clockwise and anti-clockwise rotation

**Design: DIN 69893, Form A.** Short design, guide elements of rigid design, hardened and ground wear parts ensure high concentricity and long life.

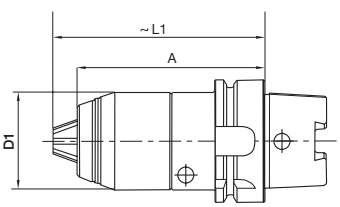
Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: pre-balanced up to 7000 min$^{-1}$ at a residual imbalance of max. 40 gmm.
Concentricity: 0.03 mm.
Max. permissible speed: 7000 min$^{-1}$.

**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

**Scope of delivery:** Short drill chuck with hex spanner.

DIN 69893 | Form A | ≤ 30 µm

format professional quality



| Order No. | Clamping range mm | 3488 format | HSK | A mm | L1 mm | D1 mm |
|---|---|---|---|---|---|---|
| 0101 | 1–16 | 288.00 (W324) | 63 | 98 | 110 | 50 |

## CNC short drill chuck AKL for clockwise and anti-clockwise rotation

**Design: DIN 69893, Form A.** Short design, guide elements of rigid design, hardened and ground wear parts ensure high concentricity and long life. 100 % concentricity test with different plug gauge diameters at various measuring points, based on DIN ISO 10888. Compact design and high rigidity result in best machining results.
High clamping forces are reached by the integrated worm gear at low effort, **Holding torque > 75 Nm at 13 mm diameter.** Machining is safe thanks to automatic blocking of the worm gear even when running anti-clockwise and quickly decelerated spindle.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: pre-balanced up to 7000 min$^{-1}$ at a residual imbalance of max. 40 gmm.
Concentricity: < 0.03 mm.
Max. permissible speed: 7000 min$^{-1}$.

**Application:** For drilling, countersinking, reaming, thread cutting and for simple finishing milling work. Can be used in machining centres, turning, drilling and milling machines.

**Scope of delivery:** Short drill chuck with hex spanner.

**Note:** Higher speeds possible with special balancing. Also available as ULTRA design (concentricity ≤ 0.015 mm).

DIN 69893 | Form A | G 2.5 | 20.000 | ≤ 30 µm

ALBRECHT Precision Chucks

## CNC precision drill chuck for clockwise and anti-clockwise rotation

**Design: DIN 69893, Form A,** made of special case-hardened steel for highly stressed components, with a core tensile strength of min. 1000 N/mm$^2$. Chuck and shank in one piece. Clamping (using a hex spanner) essentially increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during left-handed rotation or being quickly decelerated from higher speeds.

Taper angle: Tolerance AT3.
Balancing quality: G6.3 25000 min$^{-1}$.
Concentricity: 0.02 mm.
Hardened 58 ±2 HRC.

**Application:** To nest tools with cylindrical shank.

**Scope of delivery:** CNC precision drill chuck with hex spanner including sealing disc for coolant drill bits with 3-6 mm Ø.

**3523** **Without coolant supply.**

**3524** **With central coolant supply.**

## Precision collet chuck CENTRO P 3 µm

**Design: DIN 69871, Form AD/B,** constant concentricity and repeatability of 0.003 mm at a distance of 3 x D (max. 50 mm) in conjunction with FAHRION precision collet GERC-HP/-HPD/-HPdd (2 µm) and tap collets GERC-GBD. Voltage using roller wrench without risk of injury. Up to 100 % higher holding torques than with conventional collet chucks. Insensitive to temperature fluctuations. Very good vibration damping and stability.

Balancing quality: G2.5 25000 min$^{-1}$.

**Application:** In the HSC and HPC range as well as for high-precision machining results. To nest tools with cylindrical shank as well as in line with DIN 1835 B, 1835 E, 6535 B and 6535 E.

**Note:** Delivered without clamping nut (Order No. 3657) and roller wrench (Order No. 3657).

## Torque roller wrench attachment DRO

**Design:** With VKT adaptation to the defined tightening of the clamping nuts with a torque wrench.

**Note:** The outer diameter of the clamping nut must comply with DIN tolerances. Torque wrenches can be found from 📖 6/106.

| Order No. | For clamping nut | 3657 FAHRION® PRAZISION | Square mm |
|---|---|---|---|
| 0916 | HPC11M | 58.50 | 9 x 12 |
| 0930 | HPC16/ST16 | 58.50 | 9 x 12 |
| 1440 | HPC25/ST25 | 58.50 | 14 x 18 |
| 1450 | HPC32/ST32 | 58.50 (W361) | 14 x 18 |

## Precision collet GERC-HP

**Design: Precision collets GERC-HP DIN ISO 15488-B (old DIN 6499).** The collets have an average system accuracy of 3 µm (with distance 3 x D max. 50 mm) in precision collet chucks (for GERC8-HP it is 6 µm). They are all protected against corrosion with the new FAHRION Protect coating.

GERC-HP collets are especially suitable for use in the HSC range and for high-precision machining results, where you only have nominal size (tolerance h10) machining.

In the standard collet chuck they have normal clamping diameter bridging; the blue identification ring, which does not have any sealing function, needs to be removed. However, we recommend machining to nominal size.

# Hydro expansion clamping holder

The hydraulic expansion tool-holder with axial length adjustment for metal and wood working machines with rotating tools.

Designed for automatic tool changes

- DIN 69871, DIN 69893-A, DIN 69893-F, DIN 69893-E und JIS B6339 MAS BT.

Designed for manual tool changes

- DIN 69893-C.

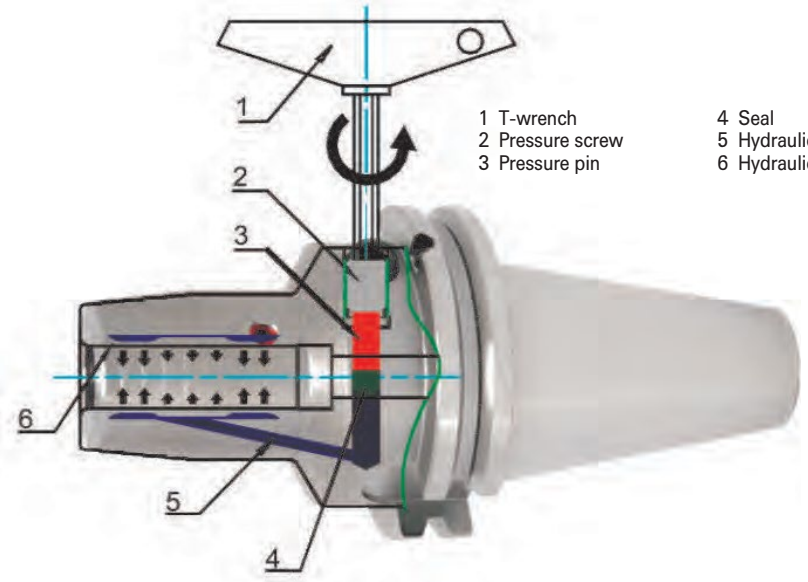
Hydraulic fluid is compressed using a hydraulic clamping set (pressure screw, pressure pin, seal).
The pressure causes a uniform deformation of the expansion sleeve so the tool shank is clamped with higher concentricity.

**Advantages of the Hydraulic expansion holder**

- Quicker tool changes
- Higher concentricity
- Vibration-damping tool clamping
- Increased tool service life
- Reduction in micro-outbreaks on the cutting edge

- Improved surface quality
- Flexibility due to the use of reduction sleeves

- Low maintenance due to closed clamping system
- Simple to operate

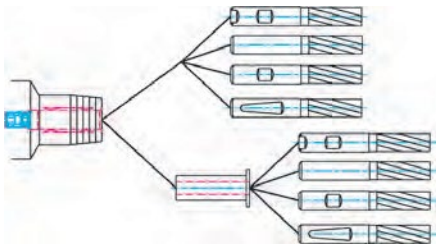


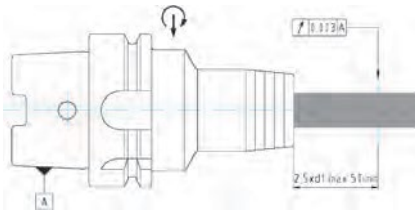
1 T-wrench
2 Pressure screw
3 Pressure pin
4 Seal
5 Hydraulic oil
6 Hydraulic bush

- Material 1600–1800 N/mm$^2$ tensile strength
- Hardness 52 + 2 HRC
- Holder balanced
- Laser marking
- Max. revolutions 40000 min$^{-1}$ (Observe rpm limits, interface, fine balancing recommended!)
- Optimum operating temperature 20–50 °C; higher temperatures upon request, not more than 80 °C
- Coolant pressure maximum 80 bar
- Adjustment 10 mm
- Machinable shafts (tolerance h 6) with and without ruduction sleeve:
- DIN 1835 shapes A, B, C, D
- DIN 6535 shapes H, HB, HE

**WTE Hydraulic expansion holder**

- Greater torque transmission
- Design equiv. to DIN 69882-7
- Higher positioning and repeat accuracy
- Tool clamp with highest concentrcity – maximum 3 µm
- Concentricity inspection and balancing protocol for each delivered hydraulic expansion holder
- Continuous enhancements
- Certified production acc. to DIN EN ISO 9001:2000





Concentricity of the WTE hydraulic expansion holder with test mandrel in a tensioned state.

## Precision collet GERC-HPD - sealed

**Design: Precision collets GERC-HPD similar to DIN ISO 15488-A (old DIN 6499).**
The collets have an average system accuracy of 3 µm (with distance 3 x D max. 50 mm) in precision collet chucks (for GERC8-HP it is 6 µm). They are all protected against corrosion with the new FAHRION Protect coating.

GERC-HPD collets have a seal for internal cooling and can be used up to 120 bar. Shanks with lateral face can only be used in a limited way, i.e. the face must be behind the rubber plug to ensure sealing. They are especially suitable for use in the HSC range and for high-precision machining results.

GERC-HPD does not have clamping diameter bridging (tolerance h8). During use in a standard collet chuck, the blue identification ring must be removed.

## Precision collet GERC-HPDD

**Design: Precision collets GERC-HPDD similar to DIN ISO 15488-A (DIN 6499 old).**
The collets have an averaged system accuracy of 3 µm (with distance 3 x D max. 50 mm) in precision collet chucks.

They have a seal for internal cooling (up to 120 bar) and additional spray nozzles so that, in the case of a workpiece without a cooling channel, the coolant sprays up to the cut. Shanks with lateral face can only be used in a limited way, i.e. the face must be behind the rubber plug to ensure sealing.
They are especially suitable for use in the HSC range and for high-precision machining results in CENTRO P.

The GERC-HPDD do not have clamping diameter bridging (tolerance h8), neither in CENTRO P nor in the standard collet chuck, where the blue identification ring, which does not have any sealing function, needs to be removed.

## SuperLine spiral drill

can be found on 1/71.

## Precision hydro expansion clamping chuck - short, slim

**Design: DIN 69871, Form AD/B, with internal cooling.** Material with tensile strength of 1600–1800 N/mm², hardness of 52 ±2 HRC. Hydraulic fluid is compressed using a hydraulic clamping set (pressure screw, pressure pin, seal) using a hexagonal T-key. The pressure forces developed effects even deformation by which the tool shank is being clamped with high concentricity (max. 3 µm). Taper to DIN 254.
Hole for data carrier/chip (Ballauf).

Taper angle: Tolerance AT3.
Maximum speed: 40000 min$^{-1}$.
Optimal operating temperature: 20–50 °C.
Coolant pressure max: 80 bar.
Adjustment track: 10 mm.
Balancing quality: G2.5 25000 min$^{-1}$.

**Scope of delivery:** Hydro expansion clamping chuck with hexagonal T-key.

## Precision hydro expansion clamping chuck - short, heavy

**Design: JIS B 6339 (MAS-BT), Form AD/B, with internal cooling.**
Material with tensile strength of 1600–1800 N/mm², hardness of 52 ±2 HRC. Hydraulic fluid is compressed using a hydraulic clamping set (pressure screw, pressure pin, seal) using a hexagonal T-key. The pressure forces developed effects even deformation by which the tool shank is being clamped with high concentricity (max. 3 µm). Taper to DIN 254. Hole for data carrier/chip (Ballauf).

JIS B 6339 MAS/BT | Form AD/B | G 2.5 25.000 | ≤ 3 µm

WTE MAPAL GROUP

Taper angle: Tolerance AT3.
Maximum speed: 40000 min$^{-1}$.
Optimal operating temperature: 20–50 °C.
Coolant pressure max: 80 bar.
Adjustment track: 10 mm.
Balancing quality: G2.5 25000 min$^{-1}$.

**Scope of delivery:** Hydro expansion clamping chuck with hexagonal T-key.

## Precision HPH chuck Multi 3°

NEW

**Design:** High Performance Holder. Short, heavy-duty design. For high holding forces and high, transferable torque. Long service life. Vibration-reducing effect for a better workpiece surface. Quick and easy clamping. Temperature resistant to 120 °C. Slim 3° contour as seen on shrink-fit holding fixtures. Maximum flexibility thanks to the use of reducing sleeves.

Concentricity: < 0.003 mm.
Balancing quality: G2.5 25000 min$^{-1}$.

**Application:** Ideal for use in tool- and mould-making.

**Scope of delivery:** Hydro expansion clamping chuck with hexagonal T-key.

HAIMER
Quality Wins.

# Power Clamp advantages

**The five most important reasons for the HAIMER shrink technology**

1. For ∅ 3–50 mm for carbide and HSS tools

2. Shrinking and cooling in record time
– changing tools at the press of a button
– water cooled cooling element
– concentrated cooling efficiency due to contact cooling
– gentle cooling: no material distortion

3. Universal shrinking technology with flexible modular system
– suitable for all requirements
– even for extremely long tools

4. Workshop oriented, safe handling
– optimal protection against burns
– hot parts must not be taken in the hand
– no heating of the taper
– no heating of the tool
– ease of use

5. Minimum heating due to manual operation
– long life of the chuck
– short cooling time
– low energy consumption due to precisely metered energy supply

**HighQ – high quality and reliability.**

## Precision shrink-fit device Power Clamp Economic Plus

**Design:** High-performance shrink-fit device for all tools.
With standard coil and removable guide washers, single-station system and integrated contact cooling.

Output: 13 kW.
Connection: 3 x 400-480 V, 16 A.
Max. length of thermal shrink chuck: 510 mm.

**Application:** For carbide and HSS tools with ∅ 3–32 mm.

**Scope of delivery:** Coolant manager, fitting mould and mount holder.

## Precision shrink-fit device Power Clamp Comfort NG

**Design:** High-performance shrink-fit device for all tools.
Upgradable with HD coil for shrinking Heavy Duty shrink fit chucks up to ∅ 50 mm. With intelligent NG coil and contact cooling and rotary table with 3 stations.

Output: 13 kW.
Connection: 3 x 400-480 V, 16 A.
Max. length of thermal shrink chuck: 570 mm.

**Application:** For carbide and HSS tools with ∅ 3–32 mm.

**Scope of delivery:** Shrinking device, coolant manager and 1 holder for rotary table.

| Order No. | Dimensions mm | 3429 HAIMER |
|---|---|---|
| 0115 | 860 x 600 x 990 | 12362.00 ◊ (W393) |

## Shrink-fit chuck SK 40

**Design:** All functional surfaces machined. Made of heat-resistant hot working steel, hardened 54 -2 HRC. Fine balancing with balancing screws. Suitable for HSS and carbide tools.

Shank tolerance: h6.
Balancing quality: G6.3 15000 min$^{-1}$.
Concentricity: < 0.003.

**Application:** Suitable for inductive, contact and hot air shrink devices.

**Scope of delivery:** Shrink-fit chuck with length setting screw.

* Without setting screw, without thread for balancing screws, with slots in the clamping bore for coolant supply.

## Mini - shrink-fit chuck

**Design:** Precision balanced. Slim design for precision machining, no interfering edges, this also makes spots that are difficult to reach accessible.

Balancing quality: G6.3 15000 min$^{-1}$.
Concentricity: 3 µm.

**Application:** For all carbide tools with shank tolerance h6.

DIN 69893 | Form A | G 2.5 25.000 | ≤ 3 µm

## Precision mini shrink-fit chuck

**Design: DIN 69893, Form A,** precision balanced. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control. **More precise than DIN.** Extremely slim design for precision machining, no interfering edges, this also makes spots that are difficult to reach accessible. Optimal rigidity with 3° bevel, suitable for mould inclines.

Balancing quality: G2.5 25000 min$^{-1}$.
Concentricity: 3 µm on the tool (3 x d).
Hardened 54 -2 HRC.

**Application:** For all carbide tools with shank tolerance h6.

**Note:** Delivery **without** coolant pipe..

DIN 69893 | Form A | G 2.5 25.000 | ≤ 3 µm

**Caution:** Shrink fitting only with shrink and cooling sleeves.

## Shrink extension

**Design:** Made of hot working steel. Drilled through. With length setting screw.

Shank tolerance: h6
Balancing quality: G6.3 15000 min$^{-1}$.
Concentricity: 0.003 mm.

**Application:** All-purpose and can be used over and over. For carbide and HSS shanks.

≤ 3 µm

**Scope of delivery:** With length setting screw.

## Precision chuck system Weldon Capto C6

**Design: ISO 26623**, precision balanced. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control. **More precise than DIN.** Innovative modular clamping system with highest precision. Exact positioning in the spindle, highest concentricity, torque and rigidity. All-purpose use in turning and milling processes and multitask centres.

Balancing quality: G2.5 25000 $min^{-1}$.
Concentricity: 0.003 mm.
Hardened 60 -2 HRC.

**Application:** For clamping milling cutters with cylindrical shank and lateral driving plane in accordance with DIN 1835-B and DIN 6535-HB.

**Scope of delivery:** Clamping chuck with clamping screw.

## Precision collet chuck Type ER Capto C6

**Design: ISO 26623**, precision balanced. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control. Innovative modular clamping system with the highest precision. Exact positioning in the spindle, highest concentricity, torque and rigidity. All-purpose in turning and milling processes and in multitask centres.

Hardened 60 -2 HRC.

**Application:** For clamping tools with cylindrical shank in collets to ISO 15488 (previously DIN 6499).

**Scope of delivery:** Collet chuck complete with clamping nut (balanced, with anti-friction coating for increased clamping force).

* Ultra short design without length setting screw

## Precision short drill chuck C6

**Design:** Modular design. Clamping (using a hex spanner) considerably increases clamping force in comparison to conventional chucks. At the same time, this secures the chuck against becoming loose during anti-clockwise rotation or being quickly decelerated from higher speeds. Taper to DIN 254.

Balancing quality: G6.3 25000 min$^{-1}$.
Concentricity: 0.02 mm.

**Application:** To mount tools with cylindrical shank.

**Scope of delivery:** Precision chuck with hex spanner.

## Hand clamping chuck HSPF 40

**Design:** Basic chuck with precisely adapted intermediate flange with short taper DIN 55027/ISO 702/III. Greater holding power and accurate concentricity due to collets as three-jaw chucks.

**Application:** Conventional and CNC machines, e.g. for turning, drilling, milling and grinding. Ideal for small series.

**Scope of delivery:** Security key, bolts and nuts.

## Pressure collet chuck 173E

**Design:** According to DIN 6343 with a smooth bore (up to Ø 8.0 mm) or transverse grooves (from Ø 8.5 mm).

**Closure range:** h9, i.e. only nominal size can be clamped.

**Application:** For workpiece clamping (bar or chuck work) in conventional, single-spindle lathes, e.g. with hand clamping chucks HSPF and CNC turning machines directly in the spindle or in a collet chuck.

## Precision collet GERC-B - System ER

**Design: ISO 15488-B (DIN 6499 old).** These collets set a standard in terms of precision for standard collet chucks. The super finish design with a surface roughness of < 1.6 µm offers a higher load ratio, higher rigidity and clamping forces as well as higher system concentricity. They are all protected against corrosion with the new **FAHRION Protect coating**.

- **Precise** – Concentricity and repetition accuracy **5 µm.**
- **Stabile** – Only 12 slots required to achieve the required clamping diameter bridging for DIN ISO 15488-B. Our collets are significantly less prone to misalign in the lower clamping area as compared with 16-fold slotted collets.
- **Gentle** – All longitudinal edges are not only deburred but also additionally rounded which protects the inner cone on the collet chuck from any markings. This is precondition to ensuring constant high concentricity.

**Application:** To mount tools with cylindrical shank in line with DIN 1835 B, 1835 E, 6535 B and 6535 E.

DIN 6499-B

FAHRION® PRAZISION

**Note:** Clamp diameter bridging is 1 mm (below Ø 2.0 mm = 0.5 mm). The largest Ø is always stated, i.e. Ø 16 mm clamps back to Ø 15 mm (labelling is e.g. GERC 32 F 470 E16).

## Precision collet set GERC-B - System ER

**Design: ISO 15488-B (DIN 6499 old),** Concentricity and repeat accuracy: 5 µm. Protection against corrosion with the **FAHRION Protect coating**.
Supplied in wooden case.

| Order No. | Clamping range mm | 3595 FAHRION® PRÄZISION | Collet type | Content |
|---|---|---|---|---|
| 0401 | 1– 7 | 299.50 | GERC11-B/4008E | 13-piece |

## Precision collet GERC-BD - sealed

**Design: Similar to ISO 15488-A,** with seal for internal cooling and **FAHRION Protect coating** against corrosion. Useable up to 120 bar.

**Concentricity:** 0.005 mm

**Note:** Shanks with lateral face can only be used in a limited way, i.e. the face must be behind the rubber plug to ensure sealing.

DIN 6499-B

## Collet for taps with female square

**Design: ISO 15488-B (DIN 6499-B old).** High clamping force thanks to double slot. With female square.

**Application:** For clamping threaded bores with square driver.

**Note:** Delivery without drill bit.

## Precision tap collet GERC-GBD - sealed

**Design: Similar to ISO 15488-A** (DIN 6499 old). Tap collets GER-GBD have a **concentricity of 10 µm** and can be used in precision collet chucks CENTRO P, in tapping chucks SYNCHRO T and in standard collet chucks. They have a square drive for driving the tap as well as a seal for internal cooling up to 120 bar. They are all protected against corrosion with the **FAHRION Protect coating**.

**Application:** Can be used for DIN as well as for ISO taps.

DIN 6499-B

## Tapping device

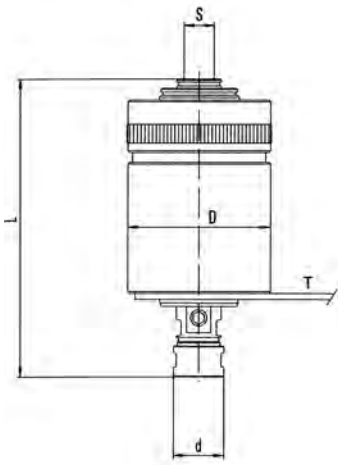
TAPMATIC

**Design: With adjustable friction clutch and quick reverse.** Length compensation compensates for the difference between machine advance and thread pitch. The integrated adjustable thrust ensures immediate thread cutting. You save time during the reversing action because the tap returns faster (1.75:1). Suitable for **drives with clockwise rotation**. The shanks (Morse tapers, cylindrical shanks or steep tapers) are interchangeable and allow insertion and screwing in respectively. The driving square for the tap is adjustable.

**Application:** For thread cutting on all hand-fed bench drills and box column drills and where the rotational direction cannot be reversed.

**Scope of delivery:** Thread cutting device with retaining bracket, 2 chuck keys and Allen key.

**Note:** The precision collet 📖 3/113 and plug-in cone need to be ordered separately. Thread cutting devices for left-hand threads upon request.



| Order No. | Cutting range in steel | 1873 TAPMATIC | Tool holder S, internal taper | Collets | Speed max. $min^{-1}$ | Pull-out T mm | Dimensions D mm | Dimensions d mm | Dimensions L mm | Weight kg |

## Tapping chuck with cylindrical shank

TAPMATIC

**Design:** Length compensation on tension and compression, compensating for the difference between machine advance and thread pitch. The integrated adjustable thrust ensures immediate thread cutting. The driving square for the tap is adjustable, with modular steep taper fixture for fitting and cylindrical shank with surface to DIN 1835 B and E. Various steep tapers can be modularly fitted.

**Application:** Ideal for use in CNC machining centres or feed units with reversing of rotation.

**Note:** Please order multi-range collet 📖 3/113 separately.

## Precision collet Rubber-Flex

**Design:** The lamellas move parallel across the whole clamping range which results in constant concentricity. With high radial clamping force, the rubber is resistant to cooling lubricants and temperatures up to 100 °C.

**Application:** For bridging large diameters when clamping tools with cylindrical shank. For use in thread cutting devices, drill holders and tool holders.

## Thread cutting device with Morse taper

**Design:** You save time during the reversing action because the tap returns faster thanks to the planetary gear (2:1). Immediately effective reversal on changing feed direction. Continuous setting of the safety clutch by turning the sleeve nut with guide value scale. Simple turning of the cam disc enables changing the cam coupling to surface friction for small threads. **Suitable for both right-hand and left-hand threads.** The continuously clamping jaws can accommodate all tap shanks within the cutting range, including those with intermediate and inch sizes.

**Application:** For thread cutting on all hand-fed bench drills and box column drills and where the rotational direction cannot be reversed.

**Tapping chuck with minimum length compensation SYNCHRO T**

The feed axis is synchronised with spindle rotary movement on CNC machining centres. This means that threads with tool mounts without length compensation can be cut ("rigid tapping") with these synchronised spindles. Practice, however, has shown that there are synchronisation faults. High axial forces reducing the service life by high flange friction develop as a result when rigid tapping chucks are being used leading to threads which are not true to gauge size or result in inaccurate threads. This problem is eliminated using tapping chucks with minimum length compensation.

**SYNCHRO T tapping chucks technical features:**

- minimum length compensation on tension/compression (±0.5 mm)
- high radial rigidity due to double bearing
- high concentricity
- high clamping force through clamping using collet chuck taps with female square
- separate compression/tension mechanism
- defined, adjustable compression/tension forces
- compact, wear-free design
- long service life
- internal coolant supply
- no clamping nuts with sealing discs necessary when using coolants, because the FAHRION tapping collets GERC-GBD are delivered with sealing plugs (usable up to 120 bar).
- minimum quantity lubrication (MQL) possible upon request

## Tapping chuck with minimum length compensation SYNCHRO T

**Design:** With cylindrical shank to **DIN 1835 B+E.**

**Scope of delivery:** Tapping chuck with clamping nut ST-GB.

**Note:** Tightening occurs by means of roller spanner (Order No. 3657 on 📖 3/76). Suitable collets can be found on 📖 3/102.

## Quick-change chuck SF

**Design:** This quick-change adapter can be used to quickly switch the machine from drilling to thread cutting. Morse cone mount with lug DIN 228-B.

**Application:** Application usually takes place on vertical drilling machines and drilling machines with **clockwise and anti-clockwise rotation.**

**Note:** With quick-change inserts E (drilling and countersinking) and GE (thread cutting) the machine can be quickly adapted.

## Assembly jig SK40EQUIP

NEW

**Design:** High-strength, fibre-reinforced polyamide for high stability during assembly. With 4 holding magnets in the horizontal mount for safety.

**Application:** For the efficient and tool-mount-friendly equipping and removing – vertically and horizontally – of cutting tools and retention studs on tool holders. Can be affixed onto any workbench.

| Order No. | Size | 1926 | Dimensions L x W x H mm |
|---|---|---|---|
| 0025 | SK 40 | 99.00 (W388) | 120 x 150 x120 |

## Assembly jig with rollers, basic

FAHRION® PRAZISION

**Design:** Assembly jig with rollers, friction-fit, therefore self-clamping.

**Application:** Simple and secure clamping of tool holders on the collar using rollers, for mounting and removing cutting tools. For all conventional tool holders, such as SK (DIN 69871), HSK (Forms A, B, C, D, E, F), C (polyagonal shanks), JIS B 6339 and CAT (ANSI B5.50).

| Order No. | For tool holder | 3965 FAHRION® PRAZISION | Collar ∅ mm |
|---|---|---|---|
| 0100 | SK 30/HSK 50/C5 | 123.00 | 50 |

## Universal 3D probe

IP 67

HAIMER Quality Wins

**Design: Protection class IP 67.** Precise Universal 3D probe for incorporating in the milling spindle or countersunk head; the spindle axis is positioned accurately on the workpiece or device edges. Any approach direction (X, Y, Z-axis). The dial gauge always deflects in the same direction and indicates the distance between the spindle axis and the workpiece edge. As soon as the display is set to zero, the spindle axis is positioned without prolonged attempts; without calculations, without sign problems, precisely on the edge of the workpiece. This reduces the additional costs. increases productivity and relieves employees. The probe tip is changed without requiring a tool; recalibration of the probe is not necessary. The enlarged travel path in combination with the tried and tested predetermined breaking point provide additional safety. For maximum measuring accuracy, all universal 3D probes are individually measured and aligned during installation. For extremely easy handling, the Universal 3D probe is available with an integrated steep taper adaptor (Order No. 3770 0010). The steep taper (DIN 69871, SK 40) and Universal 3D probe form one unit.

**Application:** For setting workpiece zero points and length measurements on milling and grinding machines (insulated probe tip) as well as for centring holes and spindles.

**Scope of delivery:** 3D probe and short probe tip ∅ 4 mm.

**Note:** The new generation probe tips are also compatible with existing Universal 3D probes. Replacement probe tip (Order No. 3777 📖 3/125).

| Order No. | Shank ∅ | 3770 HAIMER | Ball tip ∅ mm | Display accuracy mm | Housing ∅ mm | Length without clamping shank mm |
|---|---|---|---|---|---|---|
| 0005 | 20 mm | 285.00 | 4 | 0.01 | 65 | 113 |
| 0010 | SK 40/DIN 69871 | 307.00 (W392) | 4 | 0.01 | 65 | 113 |

## Digital 3D probe

IP 64

HAIMER Quality Wins

**Design:** Protection class IP 64. The digital 3D probe is a development of the tried and tested mechanical 3D probe. The spindle or countersunk head can be positioned quickly and reliably on the reference edges. The start-up process can be traced accurately on the digital dial gauge. The zero setting is found immediately. The machine measuring system can be zeroed without calculations, as the spindle axis stands directly on the probed edge. Digit height of the LC display 8.5 mm, in this way the values remain unambiguous and correctly readable from a distance, even on large machining centres.

**Function:** Switch-on and switch-off, mm/inch-conversion.

**Application:** For setting workpiece zero points and length measurements on milling and grinding machines (insulated probe tip) as well as for centring holes and spindles.

**Scope of delivery:** 3D probe with battery and short probe tip ∅ 4 mm.

**Note:** The new generation probe tips are also compatible with existing Universal 3D probes. Replacement probe tip (Order No. 3777 📖 3/125).

| Order No. | Shank ∅ mm | 3775 HAIMER | Ball tip ∅ mm | Display accuracy mm | Repeat accuracy mm | Measuring accuracy mm | Housing ∅ mm | Length without clamping shank mm |
|---|---|---|---|---|---|---|---|---|
| 0005 | 20 | 506.00 (W392) | 4 | 0.001 | 0.001 | 0.005 | 65 | 113 |

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Zero Master analogue

IP 67

HAIMER Quality Wins.

**Design: Protection class IP 67.** Smallest 3D probe in the world, for incorporating in the milling spindle or countersunk head; the spindle axis is positioned accurately on the workpiece or device edges. Any approach direction (X, Y, Z-axis). The size of the Zero Master is adapted to small machines. The small, analogue dial gauge always deflects in the same direction and indicates the distance between the spindle axis and the workpiece edge. As soon as the display is set to zero, the spindle axis is positioned without prolonged attempts; without calculations, without sign problems, precisely on the edge of the workpiece. This reduces the additional costs. increases productivity and relieves employees. The clamping shaft has a diameter of 10 mm and can therefore also be used on machines with SK 30 or with small HSK spindles. Large workpieces can also be measured through the shortened housing, which projects only a little way out of the spindle. The probe tip is changed without requiring a tool; recalibration of the probe is not necessary. The enlarged travel path in combination with the tried and tested predetermined breaking point provide additional safety. For maximum measuring accuracy, all 3D probes are individually measured and aligned during installation. The Zero Master can be equipped with a short (ball Ø 4 mm) and a long (ball Ø 8 mm) probe tip. The probe tips are compatible with all other Haimer 3D probes.

**Application:** For setting workpiece zero points and length measurements on milling and grinding machines (insulated probe tip) as well as for centring holes and spindles.

**Scope of delivery:** 3D probe with short probe tip Ø 4 mm.

**Note:** Replacement probe tip (Order No. 3777 📖 3/125).

| Order No. | Shank Ø mm | 3777 HAIMER | Ball tip Ø mm | Display accuracy mm | Housing Ø mm | Length without clamping shank mm |
|---|---|---|---|---|---|---|
| 0000 | 10 | 285.00 (W392) | 4 | 0.01 | 49 | 96 |

## 3D probe NEW GENERATION

IP 67

HAIMER Quality Wins.

**Design: Protection class IP 67.** Further development of the Universal 3D probe, with improved mechanism and new, compact, handy housing, for incorporating in the milling spindle or countersunk head. The spindle axis is positioned accurately on the workpiece or device edges. Any approach direction (X, Y, Z-axis). The large, analogue 1/100 mm dial gauge (2 pointers) with marked travel path (safety distance) always deflects in the same direction and indicates the distance between the spindle axis and the workpiece edge. As soon as the display is set to zero, the spindle axis is positioned without prolonged attempts; without calculations, without sign problems, precisely on the edge of the workpiece. This reduces the additional costs. increases productivity and relieves employees. The original Haimer probe tip for max. accuracy of 0.01 mm is changed without requiring a tool; recalibration of the probe is not necessary. The enlarged travel path in combination with the tried and tested predetermined breaking point provide additional safety. For maximum measuring accuracy, all 3D probes are individually measured and aligned during installation.

**Application:** For setting workpiece zero points, length and depth measurements on milling and grinding machines (insulated probe tip) as well as for centring holes and spindles. Also used for testing the straightness and evenness of surfaces.

**Scope of delivery:** 3D probe with short probe tip Ø 4 mm. Replacement probe tip (Order No. 3777 📖 3/125).

| Order No. | Shank Ø mm | 3777 HAIMER | Ball tip Ø mm | Display accuracy mm | Housing Ø mm | Length without clamping shank mm |
|---|---|---|---|---|---|---|
| 0010 | 12 | 285.00 (W392) | 4 | 0.01 | 62 | 100 |

## 3D probe NG with short adapter

**Design:** Protection class IP 67. With integrated short adapter and enlarged travel path. No manual setting of the concentricity nor recalibration required.

**Concentricity:** 0.01 mm.
**Accuracy:** 0.01 mm.

**Application:** Simple workpiece measuring when there is little space around the machine, in milling and grinding machines, and for workpiece zero setting and length measurements in any probe direction.

**Note:** Replacement probe tip (Order No. 3777 📖 3/125).

## Precision centring device Centro

**Design:** At slow speeds, the spindle is moved close to the axis being searched for. The probe tip slides along the wall of the bore hole or shank. As long as the spindle and the axis being searched for do not align, the probe tip deflects during rotation and transfers the movement onto a large dial gauge. The dial gauge does not turn with the spindle, and thus can always be viewed by the operator. The position of the spindle can now be corrected until the pointers on the dial gauge stand still. Concentricity errors of the spindle or clamping are aligned. With clamping shank ∅ 16 mm.

**Application:** For the fast and precise determination of bores, spindles, planing surfaces and reference edges centred to the working spindle on milling machines. Can be used horizontally or vertically.

**Scope of delivery:** Precision centring device with straight probe tip ∅ 5 mm.

## Edge finder - mechanical

**Design:** All parts are hardened and ground, with smooth and cylindrical clamping shank. Clamping shank and feeler head are spring-connected. Supplied in a plastic case.

**Application:** For aligning workpiece surfaces or edges.

| Order No. | Size | 3754 | Probe head Ø mm | Clamping shaft diameter mm |
|---|---|---|---|---|
| 0003 | 3 | on request | 10 | 10 |
| 0005 | 5 | on request | 10 + 4 | 10 |

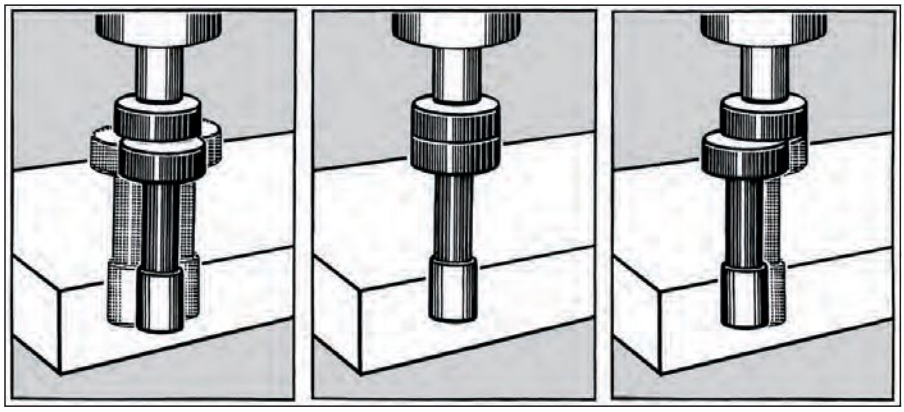
3754 0003 3754 0005

## Edge finder - mechanical

NEW

**Design:** Hardened, precision-ground and lapped, with smooth and cylindrical clamping shank. Clamping shank and feeler head are spring-connected. Supplied in a plastic case.

**Application:** For aligning workpiece surfaces or edges with a precision of 0.01 mm. Makes it easier to record the zero line. Spindle speed approx. 600 $min^{-1}$.



Start-up, probe runs non-round

Sensor piece touches the workpiece and runs smoothly

Probe moves suddenly to the side = reference point/zero line

... 1001 ... 1003 ... 1005

| Order No. | Size | 3755 TSCHORN | Probe head Ø mm | Clamping shaft diameter mm |
|---|---|---|---|---|
| 1001 | 1 | 47.30 | 6 | 6 |
| 1003 | 3 | 28.20 | 10 | 10 |
| 1005 | 5 | 28.20 (W390) | 10 + 4 | 10 |

## Replacement springs for edge finders

NEW

| Order No. | Size | 3755 TSCHORN | PU |
|---|---|---|---|
| 1008 | 1 | 29.40 | 10 |
| 1010 | 3/5 | 28.60 (W390) | 10 |

## Edge finder - optical

NEW

**Design:** Probe precision 0.01 mm, hardened and precision ground, with luminous red LED display.

**Application:** For measurements on drilling and milling machines, machining centres, for external and internal centring. The indicator lights up on touching the workpiece edge. The zero line is reached allowing for stylus sphere radius. The stylus can be used with standing or rotating spindle. The resiliently mounted ball folds away on passing the workpiece edge so as to avoid damage to the probe.

**Scope of delivery:** Edge finder including battery A23.

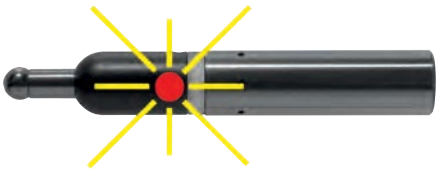
| Order No. | Mounting shank Ø mm | 3757 TSCHORN | Design | Total length approx. mm |
|---|---|---|---|---|
| 1016 | 16 | 82.80 | 2D with illuminated display | 99 |
| 1020 | 20 | 67.60 | 2D with illuminated display | 94 |
| 1022 | 16 | 130.50 | 3D with illuminated display | 111 |
| 1024 | 20 | 130.50 (W390) | 3D with illuminated display | 106 |

## Edge finder - optical/acoustic

**Design:** Hardened and precision ground, with luminous red LED display. Supplied in a plastic case.

**Application:** For measurements on drilling and milling machines, as well as machining centres with a precision of 0.01 mm. For external and internal centring. The indicator lights up on touching the workpiece edge and a signal will sound. The zero line is reached allowing for stylus sphere radius. The stylus can be used with standing or rotating spindle. The resiliently mounted ball folds away on passing the workpiece edge so as to avoid damage to the stylus.

**Scope of delivery:** Edge finder including battery A23.



| Order No. | Shank Ø mm | 3757 | Design | Total length approx. mm |
|---|---|---|---|---|
| 0030 | 20 | on request | 2D | 119 |
| 0035 | 20 | on request | 3D | 131 |

## Workpiece stop Stop-Loc

NEW

**Design:** Manual universal length stop made of anodised aluminium for the fast calculation of length measurements. Readings in millimetres and inches. 2 slides in red and gold for the simple reading of measuring values on both sides.

**Application:** Easy presetting of tools. Can be used for turning, milling, drilling, sawing and grinding.

| Order No. | Setting length mm | 3757 |
|---|---|---|
| 0040 | 140 | 23.50 (W346) |

## 5D workpiece stop

**Design:** The workpiece stop is made from an ultra-stable aluminium construction, and can be freely adjusted across 5 axes, with speed and flexibility. The workpiece stop can be combined in many ways using the additionally available combination element.

**Application:** The workpiece stop is, amongst other things, a versatile instrument for positioning on processing machines or during assembly works.

**Scope of delivery:** Workpiece stop with T-slot nut M8x12 and hex spanner.

| Order No. | Dimension mm | 3757 |
|---|---|---|
| 0100 | Ø 39 x 150 x 190 | on request |

## Workpiece stop system ESSET 5D

skantek

**Design:** Body made of anodised aluminium, clamping lever with plastic-coated die-cast zinc. The stop has a modular design and **can be freely rotated and moved across 5 axes**. Several units can be combined. With 2-step adjustment mechanism and one stop plate to be used as internal stop (grooves, etc.).

**Application:** Can be used for many machining operations on drilling and milling machines. Can be uses as internal and external stop. Can be combined with double stop (Order No. 3955 0020) as multiple system design, so that several units can be bundled together. **Hooked, ball or fork stop heads can be manufactured for specific conditions.**

| Order No. | Design | 3955 skantek | Working area mm |
|---|---|---|---|
| 0010 | Single stop | 130.50 | 150 |
| 0020 | Double stop | 251.00 (W346) | 300 |

3955 0020

## Slot nut

| Order No. | For slot width mm | 3956 skantek | Thread |
|---|---|---|---|
| 0010 | 10 | 5.00 | M8 |
| 0012 | 12 | 5.00 | M8 |
| 0014 | 14 | 5.00 | M8 |

| 0018 | 18 | 5.00 (W346) | M8 |

## Zero adjuster

NEW

TSCHORN

**Design:** From hardened steel, with elastic touch surface.

**Application:** For positioning of workpiece surfaces or tool lengths in the Z-direction on rotary or milling machines. The device is placed onto the workpiece. Using the machine spindle, the cutting tool, e.g. milling cutter, is then moved on the touch surface until the pointer is at zero on the dial gauge. The distance from the cutting tool to the workpiece is now precisely 50 mm, thereby the blades are not damaged when measuring.

**Scope of delivery:** Zero setter with dial gauge.

| Order No. | Design | 3759 TSCHORN | Overall Ø mm | Sensing plate Ø mm |
|---|---|---|---|---|
| 1001 | without magnetic base | 139.00 | 39 | 19 |
| 1004 | with magnetic base | 181.50 (W390) | 39 | 19 |

## Marking tool

**Design:** High-quality guides and robust special needle. Stepless adjustment via knurled nut across a scale of 0-15 mm, including when clamped. Ideal for small and medium lot sizes. Mounting in 20 mm collets or Weldon mount. Quick needle change by simply pulling out needle. The surface of the material structure is only compressed on the surface - the material is not weakened.

**Eccentric needle:** Clearer marking. The higher the eccentricity and the spindle speed, the deeper the marking. External cooling recommended.

**Centric needle:** External cooling not required.

**Application:** For marking various materials, including aluminium, titanium, steel, bronze etc.

**Note:** Marking needles not included.

### 3760 0006 Marker large

Function control for use in automation (only in Weldon mount). The tool machine requires an internal coolant supply as well as an M-command that can be cancelled at any time.

| Order No. | Design | 3760 |
|---|---|---|
| 0006 | Marker large | 704.50 (W001) |

3762 0055

## Drilling machine vice

**Design:** Body made from cast iron. The interchangeable jaws are hardened, ground and burnished, one of the jaws is smooth and the other comes with longitudinal and transverse prisms. Both jaws have support surfaces to clamp flat workpieces. The overall length remains the same when the jaws are opened since the burnished spindle moves protected in the handle. With universal fixing option through mounting slots and oblong holes. With non-slip handle.

**Application:** For clamping of workpieces on drilling machines. Moreover, ideally suitable for fixing workpieces on measuring machines.

| Order No. | Jaw width mm | 3805 format | Jaw span mm | Slot distance mm | Weight kg |
|---|---|---|---|---|---|
| 0085 | 80 | 46.50 | 70 | 105 | 3.6 |
| 0100 | 100 | 60.10 | 92 | 125 | 4.3 |
| 0120 | 120 | 75.70 | 110 | 150 | 6.3 |
| 0150 | 150 | 124.50 (W328) | 125 | 170 | 8.1 |

## Drilling machine vice, forged

NEW

**Design:** Forged body, extremely stable, large clamping range, **long design.** Hardened clamping surfaces and recessed grips for easy operation. Quick adjustment with recessed hexagon.

**Application:** For clamping of workpieces on drilling machines.

| Order No. | Jaw width mm | 3805 format | Jaw span mm | Slot distance mm | Weight kg |
|---|---|---|---|---|---|
| 1100 | 110 | 202.50 (W328) | 170* | 138 | 9.5 |

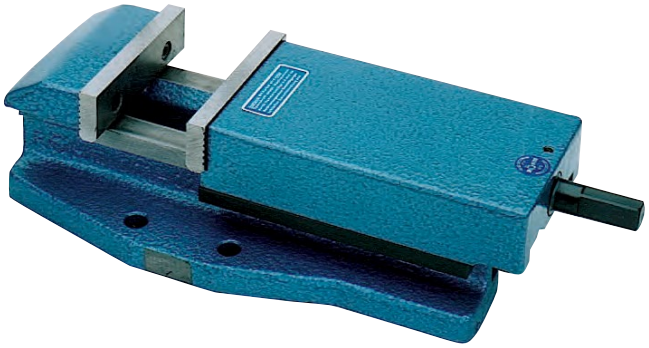
## Machine vice - mechanical

**Design:** Body made from special cast iron, hardened and ground clamping jaws.

**Application:** For clamping of workpieces on drilling/milling machines and machining centres.

**Scope of delivery:** Machine vice with hand crank.

**Note:** Replacement jaws (Order No. 3840, 3841 and 3842 3/137).



| Order No. | Size | 3823 format | Jaw width mm | Jaw span mm | Jaw height mm | Clamping force kN | Open length mm | Weight approx. kg |
|---|---|---|---|---|---|---|---|---|
| 1092 | 1 | 425.50 | 92 | 85 | 31.6 | 18 | 362 | 12 |
| 2113 | 2 | 515.50 | 113 | 105 | 31.6 | 25 | 423 | 13.5 |
| 3135 | 3 | 659.50 | 135 | 125 | 39.6 | 35 | 510 | 25 |
| 4160 | 4 | 828.50 (W328) | 160 | 145 | 49.6 | 45 | 575 | 40 |

## Rotary plate

**Design:** With ground contact edge and graduation. The vice is fixed on the rotary plate by means of fastening screws and T-nuts.

**Application:** For machine vices (Order No. 3823).

**Scope of delivery:** Standard rotary plate including necessary fastening screws and T-nuts.

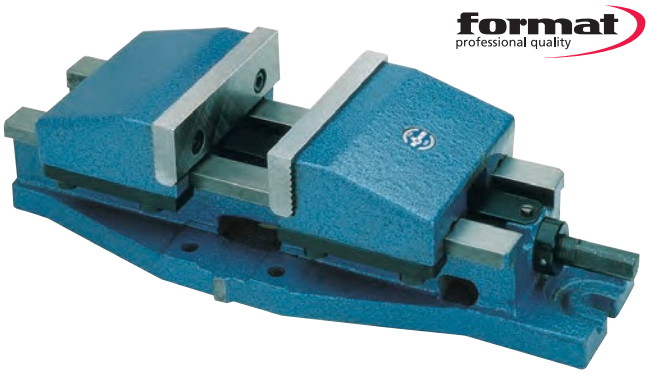
| Order No. | For size | 3834 format | Diameter mm |
|---|---|---|---|
| 0007 | 1/2 | 335.50 | 242 |
| 0011 | 3 | 336.50 | 280 |
| 0016 | 4 | 381.50 (W328) | 340 |

## Centric vice - mechanical

**Design: Low, sturdy design,** body made from special cast iron. The interchangeable and reversible jaws are hardened, ground and burnished, one of the jaws is smooth and the other comes with longitudinal and transverse prisms. The jaws are mechanically adjusted and the hand crank is used to bridge the whole clamping range. The spindle is covered and thus protected from dirt and chips. **With centric clamping,** the lateral guides allow for easy and precise arrangement of the vice.

**Application:** For milling and planing all types of moulds, slots and grooves. **The centric clamping makes it possible to use with various workpiece widths without affecting the central position of the workpieces.**

**Note:** Rotary plate (Order No. 3831 📖 3/134).
Replacement jaws (Order No. 3840, 3841 and 3842 📖 3/137).



| Order No. | Size | 3828 format | Jaw width mm | Jaw span mm | Jaw height mm | Clamping force kN | Open length mm | Height mm | Weight approx. kg |
|---|---|---|---|---|---|---|---|---|---|

## Universal rotary plate

**Design:** With ground contact edge and graduation. The vice is fixed on the rotary plate by means of T-slot screws and T-nuts.

**Application:** For centric vice (Order No. 3828).

**Scope of delivery:** Rotary plate with the necessary T-slot screws and nuts.

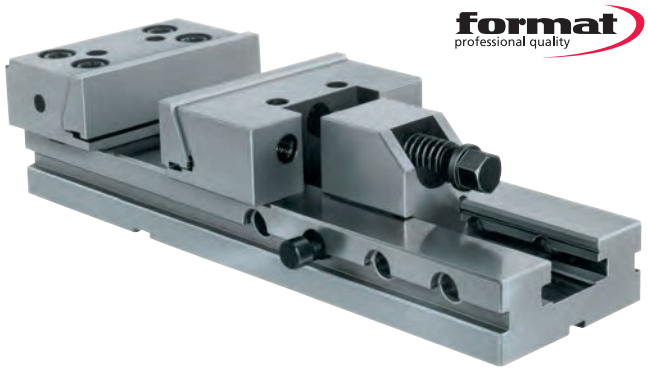
| Order No. | For size | 3831 format | Diameter mm | Weight approx. kg |
|---|---|---|---|---|
| 0006 | 2 | 328.50 | 245 | 5 |
| 0011 | 3 | 391.00 | 295 | 8 |
| 0016 | 4 | 499.00 | 345 | 11.5 |
| 0021 | 5 | 617.50 | 450 | 16.5 |
| 0026 | 6 | 625.00 (W328) | 450 | 17.3 |

## Machine vice - mechanical

**Design:** Body and jaws made of steel, hardened (60 HRC) and ground. The tolerance range is within 0.02 mm. Draw-down jaws also lockable. Fastening is done by grid holes or jaws.

**Application:** For use on machining centres and machine tools with high working accuracy.

**Note:** Rotary plate upon request.



| Order No. | Jaw width mm | 3836 format | Jaw span mm | Jaw height mm | Total length mm | Clamping force kN | Weight kg |
|---|---|---|---|---|---|---|---|

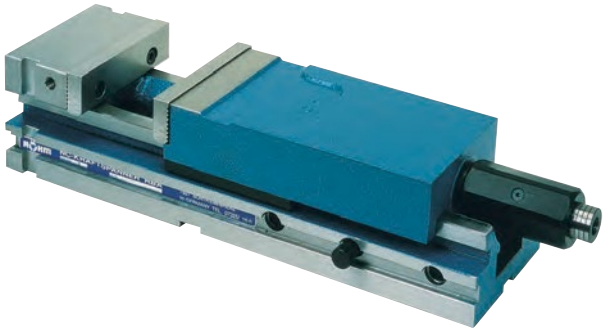
| 0160 | 160 | 2060.00 (W331) | 310 | 49.6 | 817 | 50 | 60 |

## NC power clamp RBA - mechanical/hydraulic

**Design:** Mechanical, hydraulic drive with hand crank. Body made of steel, with homogeneously drop-forged stationary jaw. All wear parts, especially jaw guides, are hardened and ground. The slim design allows space-saving clamping side by side. Exact ±0.01 mm height adjustment upon customer request. Blocking device for pre-clamping of workpieces. Self-retightening action in the hydraulic unit by built-in disc springs. **With ground-side, lateral or face-side clamping (face-side clamping with support angle).** A gas spring secures the unlocked jaw against falling down. Rapid adjustment of the clamping range via locking pin. The short design of the movable jaw (made of steel) allows a reduced overall length even by max. clamping width. Additional stepped or special form jaws (see accessories) can be fixed on the top of the stationary and movable jaws. Robust of the movable jaw flat bed guide. The drive spindle is protected against dirt and chips.

**Application:** For universal use on milling machines and machining centres.

**Note:** Form jaws and angle drive upon request.



| Order No. | Size | 3838 RÖHM | Jaw width mm | Jaw span mm | Total length mm | Clamping force kN | Weight approx. kg |
|---|---|---|---|---|---|---|---|
| 0092 | 1 | 1545.00 | 92 | 100 | 490 | 25 | 15.5 |
| 0113 | 2 | 1545.00 | 113 | 170 | 583 | 30 | 24 |
| 0135 | 3 | 1648.00 | 135 | 220 | 681 | 40 | 39 |
| 0160 | 4 | 2318.00 (W332) | 160 | 310 | 817 | 50 | 60 |

## NC compact clamping system

**Design: With mechanical/mechanical clamping system.**
The workpiece support surfaces are hardened and ground on the cast-iron NC compact clamping system. With a stationary and a movable stepped jaw, reversible, hardened and ground. With clamping surfaces for clamping jaws and stable chip protection, prevents chips from penetrating the interior of the body. Turning the clamping jaws extends the clamping range.

**Application:** Ideal for use on milling machines and machining centres.

**Scope of delivery:** NC compact clamping system with stepped jaws.

**Note:** For clamping jaws and T-nut set see (Order No. 3851 📖 3/138).
For suitable hand crank see (Order No. 3856 📖 3/137).

| Order No. | Jaw width mm | 3839 format | Jaw height mm | Clamping range mm | extended clamping range mm | Clamping force kN | Weight kg |
|---|---|---|---|---|---|---|---|
| 1125 | 125 | 1617.00 | 40 | 0–216 | 71–312 | 40 | 41 |
| 1160 | 160 | 2810.00 (W001) | 50 | 0–320 | 131–451 | 60 | 79 |

Extended clamping range by reversing the jaws.

## NC compact clamp FKS, mechanical/mechanical

**Design: Clamping system mechanical/mechanical with power transmitter, manually operated.** The stable steel base body and all guides have been hardened and ground on all sides, all clamping slides with cross grooves are hardened on all sides and the functional surfaces ground. The drive spindle is provided with pre-setting of clamping force. With clamping surfaces for clamping jaws and stable chip protection, prevents chips from penetrating the interior of the body. All wear-prone guides and the spindle thread can be greased using grease nipples mounted on both sides. Turning the clamping jaws extends the clamping range.

**Application:** Ideal for use on machining centres. Can be clamped base side.

**Scope of delivery:** NC compact clamping system **with a stationary and a movable stepped jaw.**

**Note:** For clamping jaws and T-nut set see (Order No. 3851 📖 3/138). For suitable hand crank see (Order No. 3856 📖 3/137).

Extended clamping range by reversing the jaws.

## NC compact clamping system RKE

**Design:** Steel body and guides are hardened and ground on all sides. Long clamping slide with clutch. Drive spindle with pre-setting of clamping force. Turning the clamping jaws extends the clamping range.

**Application:** Ideal for use on machining centres.

**Note:** Horizontal, lateral and vertical (when combined with a base plate) clamping possible, for example as DUO clamping tower (back to back).

Extended clamping range by reversing the jaws.

## NC compact clamping system RKE-LV

**Design: Clamping system mechanical/mechanical with power transmitter, manually operated,** short, compact design. The sturdy steel base body and all guides are hardened and ground. With stable chip protection, tension and large clamping range. The workpiece 0-point is located on the operator side. The RKE-LV enables precisely accurate positioning and minimum machining times. No displacement of the movable top jaw. Turning the clamping jaws extends the clamping range.

**Application:** Ideal for use on machining centres.
**Collision-free 5-side processing in one clamp.**

**Scope of delivery:** NC compact clamping system RKE_LV **with a stationary and a movable WZR stepped jaw.**

| Order No. | Jaw width mm | 3856 RÖHM | Jaw height mm | Clamping range mm | extended clamping range mm | Clamping force kN | Weight kg |

## NC compact centric vice RKZ-M

NEW

**Design:** Steel body and guides are hardened and ground on all sides. Short, compact design with large clamping stroke and constant clamping force. Turning the clamping jaws extends the clamping range.

**Application:** Ideal for use on machining centres, milling machines and grinding machines. Optimised for 5-axis processing.

**Scope of delivery:** Compact clamping system with stepped jaws.

**Note:** For clamping jaws and set of T-nuts see 📖 3/138.

(W333)

Clamping solutions such as the embossing method are fully responding to current trends. In the process, a mark is being embossed onto the workpiece in an embossing station. Special embossing jaws grip exactly into these small recesses on the clamping action into the vice.

Exactly this very effect the innovative RÖHM claw jaws offer. Yet using this technology, your goals will be achieved even faster and more cost-effectively. Because 'embossing' and clamping are carried out in one single processing step – and you can spare an embossing station.

## Sets of claw jaws for NC compact clamping systems.

**Design:** With hardened claw tips. Thus the clamping forces are increased by factor 3–5 in contrast to standard jaws and 5-side machining is enabled in one clamping. This results in less loss of material on the workpiece, shorter machining times as well as shortened production and costs per piece.

**Application:** Can be used for the manual or hydraulic clamping of parallel unmachined and sawn parts on vices. **For universal use by screwing on the RÖHM NC compact clamping system.** Clever alternative to stamping.

**3847** **Claw jaw SKB with fine stage.**

**3859** **Claw jaw SKB without fine stage.**

## Precision workpiece support bar Cliparc

**Design:** The Cliparc system precision pads remain where you positioned them during processing and when opening the machine vice. Thus, no time-consuming repositioning is required and laborious assembling of parallels is no longer needed. Supplied in wooden case.

**Parallelism: < 0.005 mm.**

**Application:** Set the Cliparc clamp clips into the precision pads and click them into place on the vice. **No mounting tools necessary.**

**Scope of delivery:** Set with 10 different pairs of bars and 4 clamp clips.

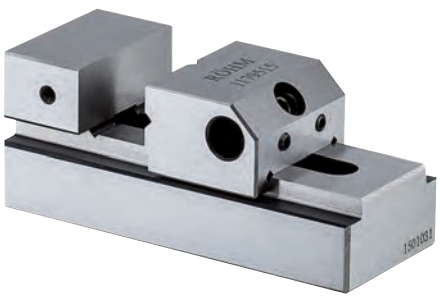
## Precision clamping fixtures PL-S micro

**Design:** Body and jaws made of alloy tool steel, hardened and precision ground. The stationary jaw is smooth, whilst the mobile jaw comes **with a horizontally ground V-block** and quick adjustment. Clamping and releasing through Allen key. With quick adjustment and draw-down effect. Side clamping surfaces for clamping jaws. Supplied in a wooden case, without Allen key.

Angularity[1]: 100 mm = 0.005 mm
Parallelism[2]: 100 mm = 0.002 mm

**Application:** For high working accuracy in precision grinding, milling, measuring and eroding.

**Note:** Allen key is found on 📖 5/123.



| Order No. | Size | 3875 ROHM | Jaw width mm | Jaw span mm | Jaw height mm | Total height mm | Total length mm | Clamping force kN | Weight kg |
|---|---|---|---|---|---|---|---|---|---|
| 0030 | 1 | 119.00 | 34 | 25 | 15 | 35 | 75 | 2 | 0.35 |
| 0045 | 2 | 155.00 (W337) | 45 | 50 | 20 | 45 | 110 | 2 | 1 |

[1] Base area for the stationary jaw clamping surface.
[2] Base area for upper guide edge.

## Precision clamping fixture PL-S

**Design:** Body and jaws made of alloy tool steel, hardened and precision ground. The stationary jaw is smooth, whilst the mobile jaw comes **with a horizontally and vertically ground V-block** and quick adjustment. Clamping and releasing through Allen key. With quick adjustment and draw-down effect. Jaw adjustable in steps, locks into place automatically. Side clamping surfaces for clamping jaws. No spindle which could e.g. foul during the erosion process. Supplied in wooden case, without Allen key.

Angularity[1]: 100 mm = 0.005 mm
Parallelism[2]: 100 mm = 0.002 mm

**Application:** Predominantly for use in tool making on grinding, milling and engraving machines, on jig drills, for measuring and inspection work, and for manufacturing processes requiring the most utmost clamping precision.

**Note:** Allen key is found on 📖 5/123.

| Order No. | Size | 3877 ROHM | Jaw width mm | Jaw span mm | Jaw height mm | Total height mm | Total length mm | Clamping force kN | Weight kg |

## Precision sine wave vice PS-SV with front rotating shaft

**Design:** Body and jaws made of alloy tool steel, hardened and precision ground. The stationary jaw is smooth, the mobile jaw comes with a horizontally ground V-block. Clamping and releasing through threaded spindle. Angle adjustment with a setting range of 0°–46° is performed using gauge blocks according to the sinus principle; bearing pins and headed dowels are hardened and ground to an accuracy of 0.001 mm. The clamping device can be positively locked in every angular position. Supplied in wooden case.

Angularity: 100 mm = 0.005 mm,
Parallelism: 100 mm = 0.002 mm,
Angular deviation at 45° ±15" .

**Application:** For high working accuracy in tool-making when grinding, milling, measuring, etc.

| Order No. | Size | 3881 ROHM | Jaw width mm | Jaw span mm | Jaw height mm | Total height mm | Total length mm | Clamping force kN | Weight kg |
|---|---|---|---|---|---|---|---|---|---|
| 0070 | 1 | 2009.00 | 70 | 80 | 30 | 93 | 160 | 6 | 5.3 |
| 0090 | 2 | 3039.00 (W337) | 90 | 120 | 40 | 113 | 210 | 7 | 11 |

**Formula for calculating the gauge block x**
x = sin α • K (for support surface A)
x = sin α • K + 1 (for support surface B)

**Example:**
Wanted: Gauge block for angle adjustment of 24° 15' on the Precision sine bar machine vice PS-SV.
Given: K = 100, sin α = 0.4107.
Calculation: x = 0.4107 • 100 = 41.07.
The height of the gauge block 41.07 mm.

# CAPTIS clamping system

The flexible modular system for external and internal clamping.

The modular clamping system CAPTIS impresses with its flexibility and compact design offering greater space in which to work. Due to the quick-change function, it takes less than one minute to switch between external and internal clamping. The comprehensive clamping by the CAPTIS collet stands out with its proven quality achieved by the high concentricity and repeat accuracy of 0.01 mm, as well as the good distribution of force.

- Modular design for greatest flexibility
- Compact construction for more work space in the machine
- Various combinations and conversion options
- Areas of application: Rotary machines, drilling, milling, processing centres and measuring machines

## Coordinate table with dovetail guide

**Design:** Made of special cast iron, clamping surface and guides ground. Flatness accuracy is 0.03 mm, lead accuracy over 100 mm is 0.01 mm. The dove tail guides are adjustable by guide rails. Whirled trapezoidal threaded spindle with axial bearings. Graduated drums with zero point adjustment, thus direct reading without conversion possible. With scale division 0.05 mm.
The tables from 450 x 240 mm feature a water channel as well as a clamping lever on both axes, so that you can clamp in any position.

**Application:** For use on drilling machines and for light milling work.

**Note:** Other models and dimensions available on request.

## Precision parallel guide, pair

**Design:** Case-hardened and height-ground in pairs acc. to pair tolerance IT 5. Nominal dimension tolerance in height in line with DIN ISO 2768m, h7 in the width; other dimensions in accordance with DIN ISO 2768.

**Application:** Preferably for smaller up to medium sized machines. They are adapted in their thickness to machine T-slots with tolerance H 8.
One pair of these guides is placed in a machine slot so that the workpieces can be quickly aligned parallel to the table.
Can additionally be used as parallels for machine T-slots.

**Note:** Several even pairs are available upon request for an additional charge.

## Cover rail for T-slot

**Design:** Made of aluminium profile. Cutting to desired length is possible without any problems using a fine saw blade.

**Note:** Cleaning the machine table groove no longer necessary. Before processing always cover the free slots with the cover strips. After processing, they can be removed easily.

## Screw paste

**Design:** The paste, which is based on mineral grease, has a synergistically acting combination of highly effective, white solid lubricants. It is heat-resistant and water washout resistant (water washout test to DIN 51807, T.2; loss of grease after 1 hr./37.8 °C = 1.4 %).

**Application:** Used to lubricate frequently handled screws/nuts in clamping devices. This particularly when aggressive cooling lubricants are being used. Non-lubricated (dry) screw connection are subjected to high friction forces (reduction of tension force) and rapid wear when frequently tightened. AMF screw paste enhances the achievable tension force through optimal sliding characteristics and is gentle on material (longer service life).

|---|---|---|---|
| 0075 | -25 to +125 | 8.20 (W342) | 75 |

## Screw for T-slot, complete with nut and washer

**Design: DIN 787.** The T-slot guide is milled, stamped with strength grade. Forged and rolled thread.

**Material: M6 -M12 tempered to strength grade 10.9.**
**M14-M24 tempered to strength grade 8.8.**

**Scope of delivery:** Screw with nut (Order No. 3906 📖 3/151) and washer (Order No. 3909 📖 3/152).

## T-slot nut

DIN 508

**Design: DIN 508, long design,** with internal thread.

**Material: Tempered to strength grade 10.**

**Application:** For precision machinery; the larger support surface relieves the burden on the machine table slots.

**Note:** The full load-bearing capacity can only be achieve if the entire thread length is screwed.

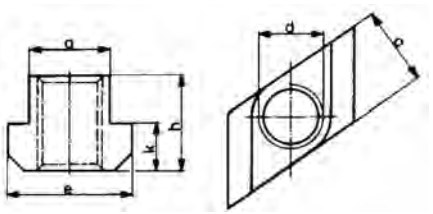
## Rhombus T-slot nut

**Design:** With internal thread.

**Application:** Thanks to its special design, the slot nut can be inserted from above if lateral insertion is not possible.

**Note:** The reduced support surface in the T-slot means that the load-bearing capacity is lower than on comparable T-slot nuts DIN 508.



| Order No. | d x T-slot | 3904 format | Dimension a mm | Dimension e mm | Dimension h mm | Dimension k mm | Strength grade |

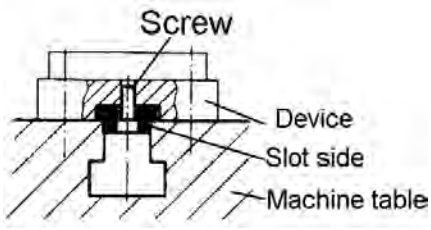
## Fixed slot nut

**Design:** Case-hardened and exactly ground for symmetry, tolerance compliant.

**Material: Steel C 15.**

**Application:** The fixed slot nuts are screwed into the standard, 20 mm wide aligning groove on vices or devices in pairs. You can work on machines with different slot widths by changing the slot nuts.



Fitting surface h6 ground

* Flat slot nut.

## Loose slot nut

**Design: DIN 6323,** case-hardened and ground.

**Material: Steel C 15.**

**Application:** The slot nuts are inserted from the side following rough alignment. No slot nuts protruding on the bottom will disturb while transporting the jig and the machine table cannot be damaged.

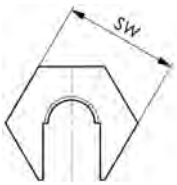
## Quick-clamping nut without collar

**Design:** Quick-clamping nut, tempered and galvanised.

**Material: Tempered steel to strength grade 6.**

**Benefits:**
- Effortless bridging of long screw thread and clamping spindles
- Easy assembly/disassembly on narrow and blind spots
- No searching of the thread
- No sizing on the thread caused by external influences
- No adverse effects from fouling such as paint residues or rust



| Order No. | Thread | 3905 AMF | Spanner width mm | M mm | Weight g |
|---|---|---|---|---|---|

## Extension nut

**Design: Height 3 d.** Both ends are flat. **Cannot be screwed through,** the thread engagement length should be min. 1 x d. However, we recommend half height of nut (1.5 x d) for optimum strength.

**Material: Tempered steel to strength grade 10.**

**Application:** To connect two studs (Order No. 3901 📖 3/149) or to connect studs with T-slot nuts (Order No. 3900 📖 3/147).

## Set of clamping elements

**Design:** Set made of plastic, comprising 55 elements. Camping jaws, stepped setting up blocks and nuts made of high-strength PBT plastic, red.
Studs, anodised aluminium.

**Application:** Suitable for use on 3D coordinate measuring machines, engraving and electrical discharge machines as well as for all clamping processes, which only require very low clamping and holding forces. Depending on the leverage selected, the possible holding force (approx. 500 N) is achieved by tightening the nut on the knurl. The nut can be slackened using a spanner if the clamping elements should have become stuck.

**Benefits:**
- Weight only 1/4 against aluminium elements and 1/10 against steel elements
- Corrosion-resistant to hand sweat
- Very easy handling
- No damage to machine table and workpiece
- Versatile combinations possible.

## Mechanical collet

**Design:** Base body made of bronzed steel. Mechanism in the body is protected from dirt and coolant. Circumferential clamping edge for mounting on the machine table. Mount for AMF-Zero-Point-System on the bottom side.

**Application:** For clamping complex workpiece contours. Faster and easier exchange of the collets.

**Scope of delivery:** Mount and collet.

# SAFE AND EFFICIENT SPANNING - VACUUM TECHNOLOGY BY AMF

Vacuum clamp technology is a quicker, more secure clamping method for different workpieces. This clamp system is best suited to metals, NF metals, wood and synthetics, with smooth to course surface finishing.

## ONE SYSTEM - TWO TYPES OF CLAMPING

The AMF vacuum clamping technology can be operated both with available compressed air and with an external vacuum pump. Above all it's a cost-effective way of clamping.

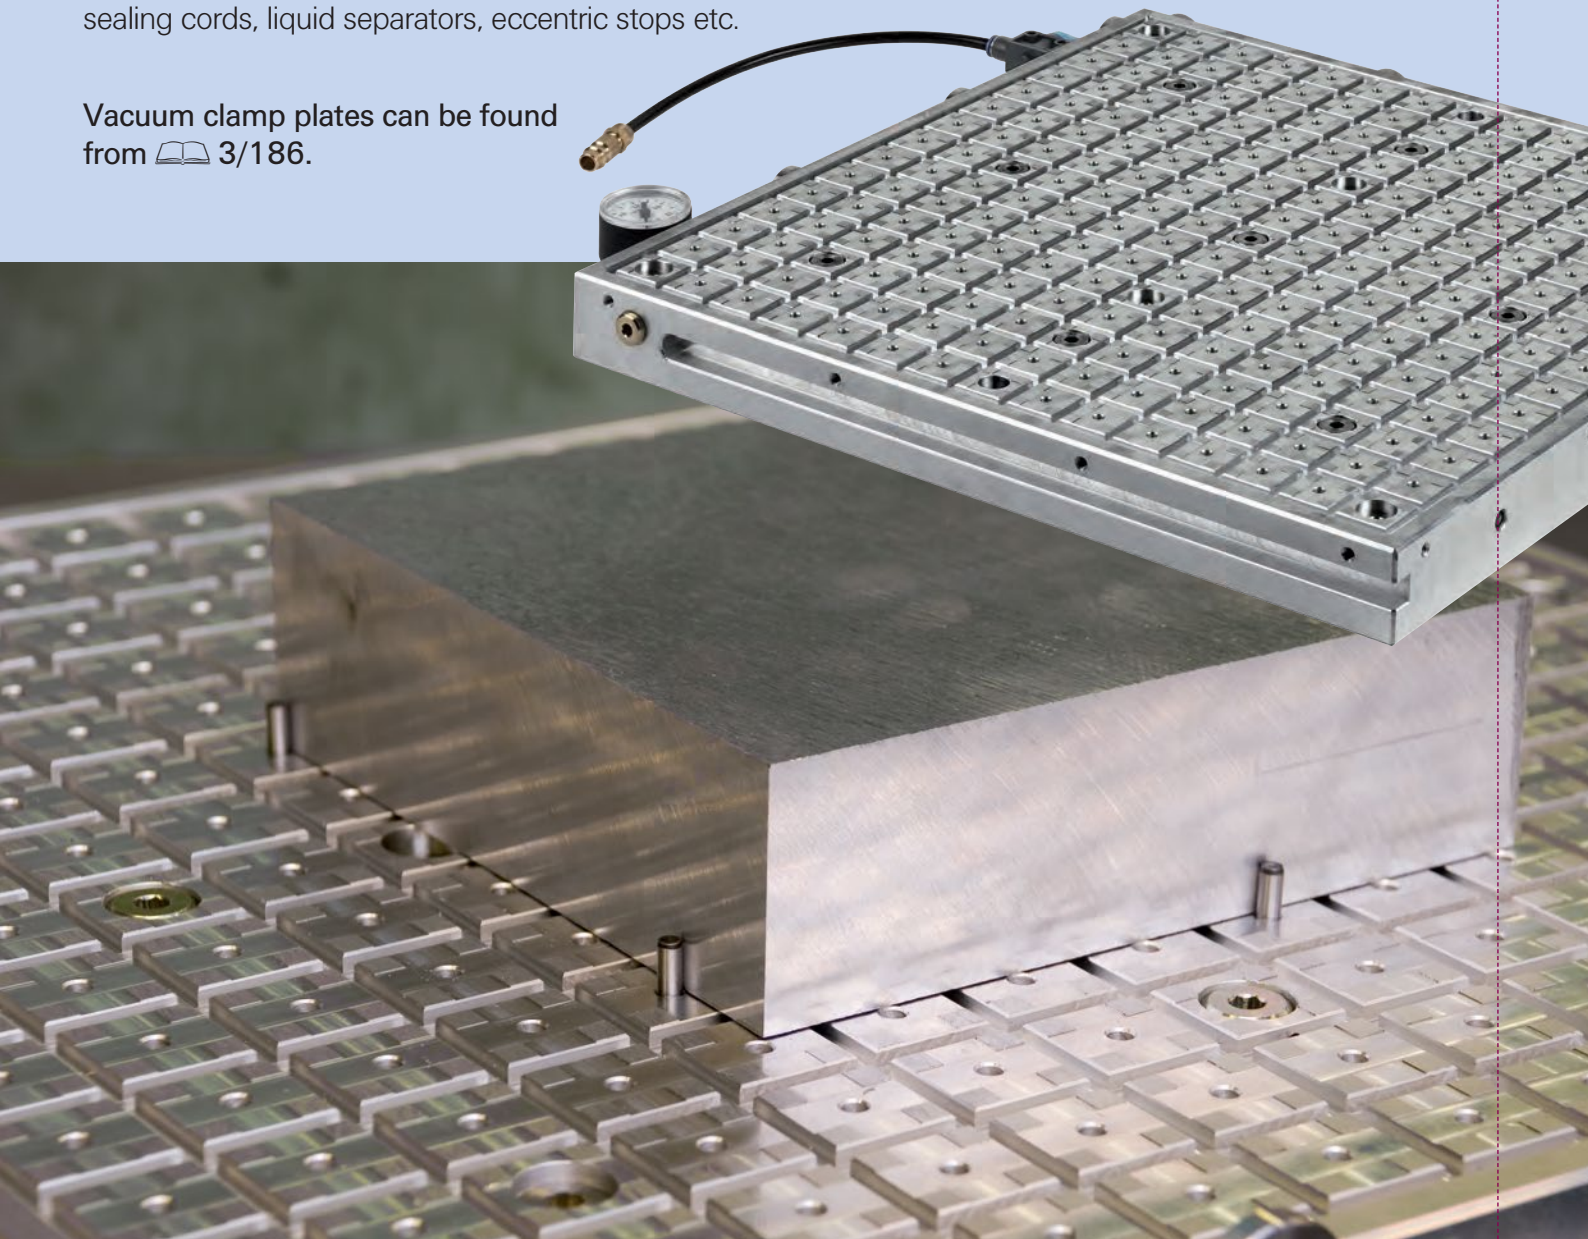
## EASY AND UNCOMPLICATED DESIGN

Lateral slots allow the AMF vacuum clamping plate to be easily fastened to the machine table or a base plate using clamps.

## EXTENSIVE ACCESSORIES

AMF offers an extensive range of accessories for vacuum clamping, such as adapter plates, sealing cords, liquid separators, eccentric stops etc.

Vacuum clamp plates can be found from 3/186.



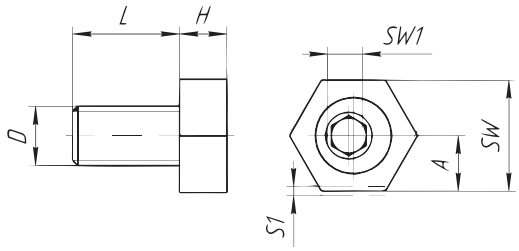
**Universal clamping system for clamping from all workpiece shapes, whether square, diagonal, concave or convex.**

**Design:** The special feature of this clamping device is the **steel screw (strength 10.9) with the eccentric head.** The eccentric tappet gives the clamping motion a very high clamping force. **A hexagonal brass disc serves as clamping piece.**

**Application:** All workpieces with the most varied shapes can be clamped with retaining studs and 1 or 2 clamping screws. The small installation height enables machining the workpiece surface without problems. Thus, the position of the clamping jaws does not have to be taken into account in CNC programming work. In addition, the compact dimensions allow space-saving multiple clamping. The tension clamps can also be used as dog.

## Eccentric tension clamp

**Application:** For screwing-in and clamping onto jigs.



| Order No. | Thread ∅ D mm | 3917 | PU | Length of thread L mm | Hexagonal washer SW mm | Washer height H mm | Eccentric travel S1 mm | Distance A mm | Clamping force kN |

## Eccentric tension clamp with T-slot nut

**Application:** The tempered T-slot nuts are pushed in the T-slot guide and locked with a threaded pin. Tensioning takes place by twisting the eccentric screw.

## Draw-down clamping claw with eccentric screw

**Design:** With tempered T-slot nut and hardened clamp disc.

**Application:** The clamping screw can be rotated so that processed workpieces can be clamped without damage using the smooth side. In addition, sawn parts, forged parts or cast parts can be clamped using the serrated edge. The workpiece is pressed against the base support by the draw-down effect. The clamp disc adapts to the workpiece angular position, thus also non-rectangular workpieces can be clamped.

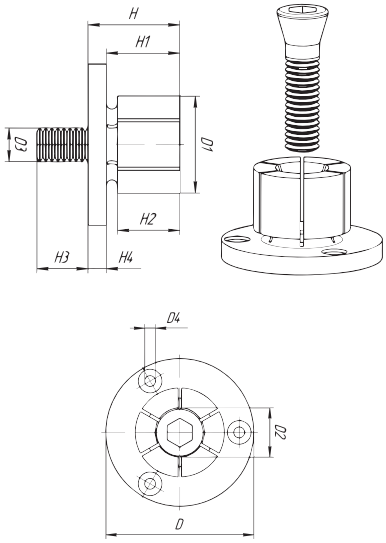
## Clamping mandrel XPA

**Design:** Made of construction steel, with hardened and coated clamping screw. The mounting flange diameter is concentric to the clamping diameter so that high repeat accuracy of the parts is achieved.

**Application:** Almost every workpiece (e.g. rotary part, milled part, drilled parts etc.) has at least one hole, and this is what is used by the XPA clamping mandrel for clamping. Thus clamping takes place from inside enabling machining of the 2nd side without problem. The compact dimensions allow multi-face machining without disturbing edges for the tool. The clamping mandrel can be machined and can be adapted to the respective diameters by turing and milling. Can be automated using hydraulic and pneumatic equipment.

**Scope of delivery:** Clamping mandrel with 3 fastening screws.

**Note:** Allen key is found from 📖 5/123.



| Order No. | Clamping range $D_1$ mm | 3917 POWERCLAMP | ∅ D h9 mm | Dimension D3 | Dimension D4 mm | Dimension H mm | Size H1 mm | Dimension H2 mm | Dimension H3 mm | Dimension H4 mm | Clamping force kN |

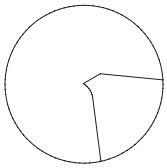
## Clamp PITBULL®

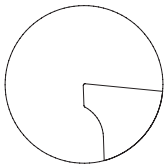
**Design: The Pitbull® tension clmaps are available in 3 different versions:**
- **made of tool steel, with knife edge for unmachined parts (cast, forged or sawn parts)**
- **made of tool steel, with blunt edge for general work**
- **made of brass, with blunt edge to avoid striations caused by clamping**

Application: Simple and ingenious. **The rear of the clamp projects forwards and downwards by drawing the screw (DIN 912). This results in an absolute draw-down effect for exact machining of different workpieces. Moreover, ideal for multiple clamping work. The compact dimensions allow multi-face machining without disturbing edges for the tool.**

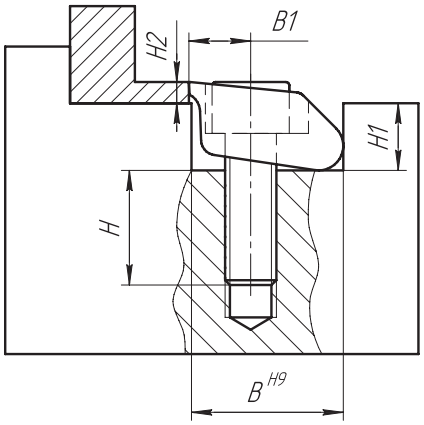
Scope of delivery: **Tension clamp with screw (DIN 912), clamp and O-ring.**



**Knife edge**



**Blunt edge**



**3917 0310**

**3917 0320**

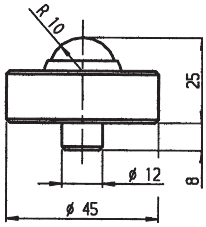
**Application:** This robust element is suitable for supporting and aligning cast and forged workpieces.



| Order No. | Load capacity kN | 3930 format |
|---|---|---|
| 0001 | 30 | 22.80 (W340) |

## Correction wedge

**Design:** Made of tempered ductile cast iron and steel, annealed in burnished finish. With 12 mm ∅ centre hole. The correcting wedge can easily be adjusted using normal manual force under 1/3 load of load capacity (F max.). The finely machined wedge surfaces allow smooth, sensitive adjustment, more precise than 1/10 mm, optionally by knurled thumb screw or hexagon screw driver. Precise vertical movements without lateral displacement are ensured thanks to the double wedge action.

**Application:** For clamping delicate cast iron or forgings on large machine tools. There is also the possibility to place the correcting wedge onto "heavy screw jacks" . This requires parallel pins DIN 6325 (12 x 30 mm).

**Scope of delivery:** Correcting wedge with spherical adapter (Order No. 3930).

**3930** **Recessed hexagon**

**3894** **Protruding hexagon**

* H mm/U = height adjustment per rotation.

## Precision height correction wedge

**Design:** Made of case-hardened steel. The finely machined wedge surfaces allow smooth, sensitive adjustment, more precise than 1/10 mm. With 12 mm diameter centre hole. Operation possible using a spanner thus ensuring high safety and easy handling at high adjustment forces. The double wedge action results in a precise vertical movement without lateral displacement. Higher safety properties when aligning heavy and large components is achieved thanks to the precision height-adjustable wedge flat design. The precision correcting wedge has an additional centring hole in the bottom base area (suitable for a pin ISO 8734 - 12 mm dia).

**Application:** The correcting wedge can be adjusted under load. The height adjustment per rotation is 0.71 mm.

**Scope of delivery:** Correcting wedge with spherical adapter.

## Stable clamping jaw

**Design:** Base body made of malleable iron; clamping jaws of tempered steel, case-hardened. Height and stable design with a strong pull-down and resilience force. With interchangeable and reversible jaws with a fluted and a smooth side.

**Application:** For lateral clamping of high workpieces.

**Note:** All mounting screws should be ordered separately based on the slot width of the screws for T-slots DIN 787 (Order No. 3900).

## Flat clamps

**Design:** Steel, tempered and annealed in burnished finish.

**Benefits:**
- For clamping very flat workpieces
- Lateral clamping of workpieces to machine surfaces completely without interfering contour
- Horizontal and vertical deployment option

**Application:** Push flat clamp into the T-slot in the machine table, position on workpiece, secure fixing screw for machine table. The workpiece is clamped through operating the clamping screw.

**Scope of delivery:** Flat clamp, complete with fixtures for fastening.

**Note:** In order to minimise wear to the mounting screws, we recommend using AMF screw paste. It has a synergistically acting combination of solid lubricants and is heat-resistant and water washout resistant.

## Vertical acting toggle clamp with horizontal foot.

**Design:** Vertical acting toggle clamp with open support arm and horizontal foot. Galvanised and passivated. The stainless steel rivets run in case-hardened bearing bushings except for sizes 0 and 1 due to lack of space. Bearing bushings are greased. Ergonomic, oil-resistant handle with large hand rest and soft component. Safety clamping piece with finger guard. Captive fastener for pressure screw at clamping arm end.

**3936** Galvanised and passivated.

**Scope of delivery:** Vertical clamping mechanism, complete with tempered, galvanised pressure screw.

**3935** **Stainless steel,** polished.

**Scope of delivery:** Vertical acting toggle clamp, complete with rustproof pressure screw.
**Also suitable for the food industry.**

**Note:** Cross arm for 2-point tension see (Order No. 3946).

## Vertical clamp with horizontal foot

**Design:** Vertical clamping mechanism with open support arm and vertical foot. Galvanised and passivated. The stainless steel rivets run in case-hardened bearing bushings except for size 1 due to lack of space. Bearing bushings are greased. Ergonomic, oil-resistant handle with large hand rest and soft component. Safety clamping piece with finger guard. Captive fastener for pressure screw at clamping arm end.

**Application:** For fastening on webs and for welded designs.

**Scope of delivery:** Vertical clamping mechanism, complete with tempered, galvanised pressure screw.

**Note:** Cross arm for 2-point tension see (Order No. 3946).

## Horizontal clamping mechanism, self-adjusting

**Design:** Horizontal clamping mechanism with open arm and horizontal base plate. Adjustable clamping force depending on set screw adjustment. **Automatic, continuous adjustment to various workpiece heights and widths with very consistent clamping force,** without manual adjustment of the pressure screw position. The base plate hole pattern fits both mm and inches. With high quality 2-component plastic handle and removable protective cap on the thrust plate.

**Application:** Optimal for deployment in batch production.

## Horizontal ratchet plus

NEW

**Design:** Horizontal clamping mechanism with increased holding forces, open support arm and horizontal foot. Galvanised and passivated with stainless steel rivets and greased bearing bushings. Oil-resistant handle with large hand rest. Safety clamping piece with captive fastener for pressure screw at clamping arm end.

**Scope of delivery:** Complete with tempered, galvanised pressure screw.

**Note:** Pressure screws can be found on 📖 3/181.

## Combi-clamp

**Design:** Galvanised and passivated. Stainless steel rivet that runs in case-hardened bearing bushings. Bearing bushings greased. Ergonomic, oil-resistant handle with large hand rest and soft component.

**Benefits:**
- Positioning and clamping in a single operation
- Robust and stable design
- Easy workpiece removal due to completely retracted clamping arm
- Superior quality acc. to the AMF quality standard

**Application:** When welding jigs, it is vital that the individual components are positioned exactly and securely clamped. In practice, this is ensured with simultaneous use of push rod clamping devices in connection with Vertical acting toggle clamps. The AMF Combi-clamp meets these two task in a single operation thus making the deployment of different toggle clamps redundant. The Combi-clamp sliding block guide translates the lever arm movement into a horizontal and vertical clamping movement thus positioning and clamping the workpiece at the same time. Discover the potential savings by using the new AMF Combi-clamp!

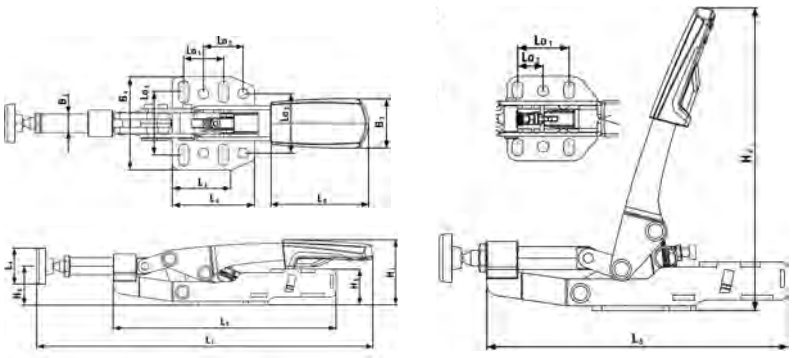
## Push rod clamping device, self adjusting

**Design:** Push rod clamping device with horizontal base plate. Adjustable clamping force depending on set screw adjustment. **Automatic, continuous adjustment of clamping height to various workpiece heights and widths with very consistent clamping force,** without manual adjustment of the pressure screw position. The base plate hole pattern fits both mm and inches. With high quality 2-component plastic handle and removable protective cap on the thrust plate.

**Application:** Optimal for deployment in batch production.



**Dimension table**

## Push rod clamping device

**Design:** Without angular foot. Push-pull clamping devices (push rod and hand lever running parallel) Long push rod guide with mounting thread and nut. Galvanised and passivated. Stainless steel rivets for size 2 and 3 that run in case-hardened bearing bushings.
Lever components and push rods mode of tempered steel. Bearing bushings greased. Push rod clamping devices with front-facing thread for direct installation in sheet metal walls or in jigs. Handle made of red, oil-resistant plastic.
For sizes 0, 2 and 3: Ergonomic, oil-resistant handle with large hand rest and soft component. Complete with tempered, galvanised pressure screw.

## Push rod clamping device with small angular foot

**Design: Push-pull clamping devices** with small angular foot (push rod and hand lever running parallel). **Long push rod guide with mounting thread and nut.**Galvanised and passivated. Lever components and push rod mode of tempered steel. The stainless steel rivets run in case-hardened bearing bushings except for sizes 0, 1 and 5 due to lack of space. Bearing bushings are greased. Handle made of red, oil-resistant plastic.
For sizes 0, 2 and 3: Ergonomic, oil-resistant handle with large hand rest and soft component. Hand lever rotatable in any angular position relative to the base area.

**Application: Can be used as push-pull clamping device.** The clamp can be affixed to sheet metal without the angular foot, or screwed into fixturing bodies with its thread.

**Scope of delivery:** Complete with tempered, galvanised pressure screw.

**Note:** Sizes 0 and 3 also available in stainless steel design.

## Push rod clamping device

Design: Push-pull clamping devices (push rod and hand lever running parallel). **Heavy design with long push rod guide.** Base body made of malleable iron, lacquered. Galvanised and passivated. Lever components and push rod mode of tempered steel. Rustproof rivets for size 3 run in case-hardened bearing bushings. The bearing bushings are greased. Handle made of red, oil-resistant plastic.
For size 3: Ergonomic, oil-resistant handle with large hand rest and soft component.

**Application: Can be used as push-pull clamping device.** Ideal for deployment in special clamping devices and in series production.

**Scope of delivery:** Complete with tempered, galvanised pressure screw.

## Push rod clamping device

**Design: Push-pull clamping devices,** short design. **Long push rod guide with mounting thread and nut.** Galvanised and passivated. Stainless steel rivets. Tempered fitting screws. Bearing bushings greased. Ergonomic, oil-resistant handle with large hand rest and soft component.

**Scope of delivery:** Complete with tempered, galvanised pressure screw.

**Application: Can be used as push-pull clamping device.** For mounting onto sheet metal walls. In addition, the push rod clamping device can be screwed in into fixturing bodies with front-facing thread. Moreover, flange mounting is possible using an angular foot (Order No. 3957).

## Cross arm for toggle clamp

**Design:** Galvanised and passivated.

**Application:** For the simultaneous clamping of 2 small workpieces as well as for the secure and fixed clamping or large workpieces at 2 points. Fastening is possible above and below the clamping arm.

**Scope of delivery:** Complete with tempered pressure screws and fastening screw.

**Suitable for:**
Size 3 for toggle clamp (Order No. 3935, 3936, 3937, 3938, 3939, 3940, 3941 and 3949),
Size 4 for toggle clamp (Order No. 3935, 3936, 3937, 3939, 3940, 3947 and 3949),
Size 6 for toggle clamp (Order No. 3935, 3936, 3937).

## Machine table clamp BS

**Design:** Rail and slide made of tempered steel, galvanised zinc-plated surface, steel base, drop-forged, plastic-coated steel lever. Swivel-mounted and steplessly height-adjustable, with lever mechanism for rapid clamping and release.

**Application:** For drilling machines and light milling work. Mounting on the machine table by means of a T-slot nut and Allen screw.

| Order No. | Size | 3948 BESSEY | Clamping height mm | Projection mm | Rail mm | Clamping force at 50 mm clamping height approx. kN | Hole for attachment screw mm |

## Compact clamp

**Design:** BAS compact clamps are distinguished by their high clamping force and extremely compact design, measuring 95 x 35 x 78 mm. This results in 30 % less area and 50 % less space required with a **clamping force up to 16000 N.** The shell and pressure arms are made from tempered stainless steel (42 CrMo4) and as such are highly stressable and very long-lasting. The worn gear ensures high clamping force. A special elastomer seal around the clamping arm protects the interior from fouling. The pressure pads are made of aluminium and provide optimal pressure distribution and smooth clamping. Handle recesses on both sides ensure optimal hold in any positioning.

**Application:** For quick and secure clamping of workpieces on tool machines, measuring tables and jig manufacturing. Ideal for assembly, when drilling, reaming, milling, grinding, honing, eroding, inspecting etc.

**Note:** To bridge large clamp heights we recommend the BASO clamping base (Order No. 3952), for quick and secure clamping the BASKN T-bar spanner (Order No. 3953).

**3950** **Compact clamp with fixing hole open.**

**3951** **Compact clamp with fixing hole closed.**

**3950**

**3951**

|---|---|---|---|---|---|
| 0010 | BASKN | 22.30 (W344) | A/F 11 | A/F 8 + A/F 10 | 230 |

## Vacuum clamping plate

**Design:** Vacuum plate with slots and suction points on the upper side. Easy positioning via holes for stop pins or lateral, height-adjustable eccentric stops Lateral grooves or fastening holes allow the vacuum clamping plate to be fastened to a base plate. Fixture plates can additionally be fixed using a sword or locating pin. By inserting the sealing cord, one or more fields can be defined for the desired workpiece size. All suction points are interconnected.

**Application:** The workpieces to be processed are clamped by the creation of a vacuum using the integrated venturi nozzle technology or with an external vacuum pump. By means of individual grid allocation it is also possible to clamp and machine multiple, different workpieces at the same time. The vacuum clamping plate is ready to use right away since all of the necessary components are included in the scope of supply. Typical applications are milling and grinding jobs.

**Benefits:**
- Vacuum clamping plates can be operated both with compressed air using the integrated venturi nozzle, and with an external vacuum pump
- Save money by using the venturi nozzle
- Low operating costs thanks to low compressed air use
- Vacuum plates can be combined
- High holding forces
- For universal use
- High coefficient of friction allows for secure clamping of non-processed workpiece surfaces
- The sealing cords balance small irregularities on the workpiece surface
- Non-warping and vibration-free five-side processing

**Scope of delivery:** Vacuum clamping plate made of aluminium, integrated venturi nozzle, sound absorber, vacuum meter, cut-off valve, 6 eccentric stops, 2 m pneumatic hose, male coupling for compressed air connection and 10 m sealing cord ∅ 4.5 mm.

**Note:** Operation only with dry, filtered and non-oiled compressed air max. suction volumes vs atmosphere: 21.8 l/min. Operating pressure for max. suction volume flow: 3.5 bar. Please consult the assembly instructions. The mounting holes make it easy to integrate the vacuum clamping plate into the AMF Zero-Point clamping system.

**3962** Grid 25 x 25 mm.

**3964** Grid 12.5 x 12.5 mm.

| Order No. | Dimensions L x W x H mm | 3962 25 x 25 | 3964 12.5 x 12.5 | No. of suction points | Operating pressure bar | Max. vacuum % | Weight kg |

## Adapter mat

**Design:** Adapter mat, rubber.

**Application:** The sealing cord is inserted into the raster of the rubber adapter mat. Go up to the end of the area to be machined in the workpiece. Next, the adapter mat is placed onto the vacuum clamping plate. The adapter mat is perforated within the marked clamping surface using a 3-5 mm ∅ hole punch. The location of the holes must be in the area of the raster cuts of the vacuum clamping plate. The workpiece to be machined is placed on it and fixed using the adjustable eccentric stops.

**Benefits:**
- The good coefficient of friction offers very good resistance to displacement forces arising during processing
- The adapter mat can be cut into up to 2 mm deep without problem
- When always using with the same contours, the adapter mat can often be reused as there will be no wear

| Order No. | Dimensions L x W mm | 3967 | Materialdicke ±0.2 mm | Weight g |

## Adapter plate

**Design:** Adapter plate made of aluminium.

**Application:** The sealing cord is inserted into the raster of the rubber adapter mat. Go up to the end of the area to be machined in the workpiece. Next, the adapter plate is screwed down to the vacuum clamping plate. The workpiece to be machined is placed on it and fixed using the adjustable eccentric stops.

**Benefits:**
- The adapter plate can be overcut by up to 2 mm (elimination of cuts)
- Preferred areas of application include the processing of thin sheets, foils, boards and even paper

| Order No. | Dimensions L x W mm | 3967 AMF | Materialdicke ±0.1 mm | Weight kg |

## Surface-mounted block

**Design:** The surface-mounted block has grooves and a suction point on its upper side. The field size is individually defined by inserting the sealing cord. The surface-mounted block is placed directly over a suction point on the vacuum clamping plate. The underside has a sealing cord of 2.0 mm Ø

**Application:** Deployment of surface-mounted blocks allows openings for machining. Workpieces can be drilled through without the vacuum clamping plate or the component itself being damaged.

**Note:** Please order sealing cord Ø 4.0 mm separately.

| Order No. | Max. vacuum % | 3967 AMF | No. of suction points | Dimensions L x W x H mm | Weight g |

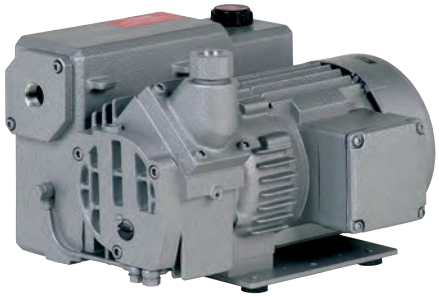
## Rotary vane vacuum pump

**Application:** If there is no compressed air available where the vacuum clamping plate is to be used, we recommend using the AMF rotary vane vacuum pump. It ensures reliable continuous operation of the clamping plates used. Thanks to its small design, the pump can be attached directly to your machine.

**Scope of delivery:** Vacuum pump with suction-side fine sieve filter, oil mist separator, switch valve for rough or fine vacuum operation, anti-vibration buffer and first oil fill, no gas ballast.



| Order No. | Vacuum % | 3967 AMF | Suction power $m^3/h$ | Lubrication | Motor power V/Hz | Noise level dB | Protection type | Continuous operation % | Weight kg |

## Liquid separator with vacuum filter

**Application:** The liquid separator effectively removes the condensate from the vacuum clamping system and protects it from soiling.

**Benefits:**
- Removes 99 % of contained liquid
- Maintenance-free
- Reduces system's operating and maintenance costs
- Easy to install (in front of the vacuum pump)

**Scope of delivery:** Liquid separator, vacuum filter, mounting unit, ball valve, connection 1/2" AG – 15 mm. Plastic tube Ø 15 x 12 mm (2 m length), coupling socket and double nipple.

**Note:** The set is supplied already assembled.

| Order No. | Dimensions mm | 3967 AMF | Connection | Weight kg |
|---|---|---|---|---|
| 0075 | 230 x 210 x 90 | 675.00 ◊ (W342) | 3/4" | 1.6 |

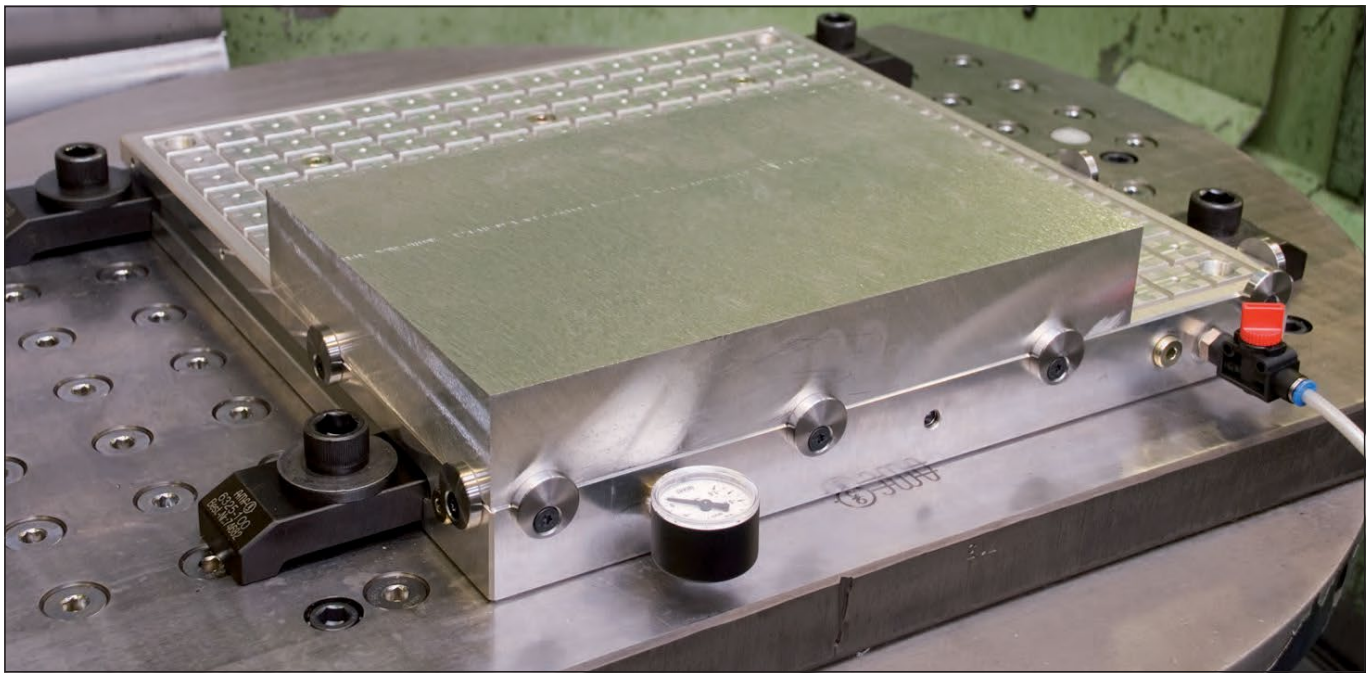
## Sealing cord

**Design:** Silicone sealing cord, anthracite-coloured. Shore hardness 8-13°.

**Application:** The sealing cord is inserted in the groove to delimit the clamping surface.

**Benefits:**
- Multiple workpieces can be clamped, even with different sizes.

| Order No. | Slot width mm | 3967 AMF | Ø mm | Length m | Weight g |
|---|---|---|---|---|---|
| 0080 | 4 | 17.85 ◊ (W342) | 4.5 ±0.45 | 10 | 320 |



## BM permanent-magnetic clamping plate

**Design:** With transverse pole pitch. A strong permanent-ceramic magnet system with low installation height and narrow pole pitch enables deployment for many tasks. A long and maintenance-free service life is ensured by the cast iron base body and robust upper plate as well as through the magnetic system. Machining of the upper plate without impairing the holding force is possible up to a depth of 15 mm in steel and 7 mm in NFM materials. Attachment on the machining tables is done using 2 clamping jaws.

**Lines of force:** approx. 8 mm above the pole plate, **therefore no magnetisation of the tools.**

**Holding force:** max. 80–100 N/cm² with ground workpiece clamping surface.

**Application:** Ideal for machining on surface grinding machines. Can furthermore be used on spark erosion systems.

**Scope of delivery:** Clamping plate with 2 stop bars.

**Note:** Further dimensions available on request.

Machining of the upper plate without impairing the holding force is possible up to a depth of 15 mm in steel and 7 mm in NFM materials. The clamping plates are normally supplied with 2 stop bars.

## BM permanent-magnetic clamping plate

**Design:** With transverse pole pitch in **reinforced magnetic design.** The double and reinforced permanent-ceramic magnetic system distributes the clamping force very highly and evenly. A long and maintenance-free service life is ensured by the solid cast iron base body and robust upper plate as well as through the magnetic system. Machining of the upper plate without impairing the holding force is possible up to a depth of 15 mm in steel and 7 mm in NFM materials. Attachment on the machining tables is done using 2 clamping jaws.

**Lines of force:** approx. 10 mm above the pole plate, **therefore no magnetisation of the tools.**

**Holding force:** max. 120–150 N/cm² with ground workpiece clamping surface.

**Application:** Für difficult cutting machining.. Ideal for milling, planing, drilling, grinding and eroding.

**Scope of delivery:** Clamping plate with 2 stop bars.

**Note:** Further dimensions available on request.

Machining of the upper plate without impairing the holding force is possible up to a depth of 15 mm in steel and 7 mm in NFM materials. The clamping plates are normally supplied with 2 stop bars.

## BM permanent-magnetic clamping plate

**Design:** With transverse pole pitch and extremely low installation height. The high-energy neodymium-iron-boron NdFeB (noble earths) magnet system, the small installation height and the finest pole pitch offer a great variety of application options. The massive construction of the base body and the stable upper plate as well as the high-energy magnetic system ensure an extremely long and maintenance-free service life. All clamping plates are equipped with a removable actuating lever. Machining of the upper plate without impairing the holding force is possible up to a depth of 5 mm. Attachment on the machining tables is done using 2 clamping jaws.

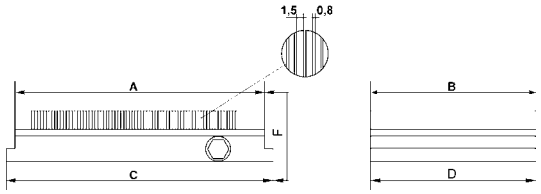
**Holding force:** max. 80–100 N/cm² (magnet quality N50) with ground workpiece clamping surface.

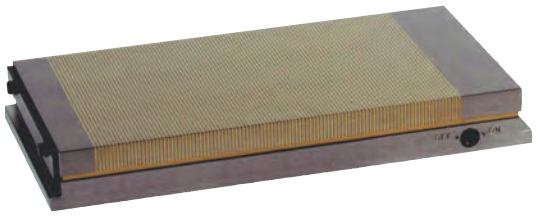
**Application:** The clamping plates have been especially designed for clamping very thin and small workpieces. The clamping systems can also be used on spark erosion systems.

**Scope of delivery:** Clamping plate with 2 stop bars.

**Note:** Further dimensions available on request.

The upper plate can be machined up to a depth of 5 mm without impairing the holding force. The clamping plates are normally supplied with 2 stop bars.





| Order No. | Table size A x B mm | 3960 | Pole pitch mm | Base area C x D mm | Overall height F mm | Weight kg |
|---|---|---|---|---|---|---|
| 0010 | 150 x 100 | 691.50 ◊ | St 1.5/NE 0.8 | 165 x 100 | 40 | 5 |

## BM precision sine bar clamping table

**Design:** With the finest transverse pole pitch, easy to pivot across the longitudinal axis and permanent-magnetic clamping plates. The high-energy neodymium-iron-boron NdFeB (noble earths) magnet system and the finest pole pitch offer a great variety of application options. The massive construction and the stable upper plate as well as the high-energy magnetic system ensure an extremely long and maintenance-free service life. All clamping plates are equipped with a removable actuating lever. The sine bar clamping table is of all-steel construction, can be swivelled up to 75° and has an extremely low installation height. The gauge blocks can be adjusted up to 45°. The support surface for gauge blocks lies 2 mm below the 0 line, thus allowing very small angles to be set: the setting accuracy for the angle is ± 5 arc seconds. Machining of the upper plate without impairing the holding force is possible up to a depth of 5 mm. Attachment on the machining tables is done using clamping jaws.

**Lines of force:** The magnetic field generated during operation is very low, and thus the residual magnetism in the workpiece and tool is insignificant.

**Holding force:** max. 80–100 N/cm² (magnet quality N50) with ground workpiece clamping surface.

**Application:** Ideal for the extremely precise grinding of very thin and small workpieces with non-parallel surfaces. The angles can bet set using gauge blocks. The table needs to be locked into place on the main shank in order to avoid any oscillations during the grinding process. The clamping systems can also be used on spark erosion systems.

**Scope of delivery:** Sine bar clamping table with 2 stop bars and a sine lookup table.

**Note:** Further dimensions available on request.

The upper plate can be machined up to a depth of 5 mm without impairing the holding force. The clamping plates are normally supplied with 2 stop bars.

## BM permanent-magnetic round chuck

**Design: With parallel pole pitch** in enhanced magnetic design. An especially strong, permanent-ceramic magnet system with high, evenly distributed holding force across the whole clamping surface ensures the deployment on lathes and grinding machines. The worked-in centring grooves facilitate aligning the workpieces. All round chucks can receive centring (see table, size D and H, for dimension) as required. Machining of the upper plate without impairing the holding force is possible up to a depth of 15 mm in steel and 7 mm in NFM materials. The clamping force can be continuously regulated from zero to maximum.

**Holding force:** max. 120–150 N/cm² with ground workpiece clamping surface.

**Application:** Designed for heavy chip removal. For machining on lathes and grinding machines.

**Note:** Further dimensions available on request.

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## BM panel demagnetisation device

**Design:** Equipped with signal light, on / off switch and connection cable with plug.
Supply voltage: AC 230 volts, 50 Hz.

**Application:** For the simple demagnetisation of workpieces with residual magnetism.

**Note:** Other supply voltages upon request.

| Order No. | Length mm | 3970 | Width mm | Height mm | Performance VA |
|---|---|---|---|---|---|
| 0010 | 160 | 495.50 | 120 | 115 | 286 |
| 0020 | 220 | 752.50 | 170 | 120 | 660 |
| 0030 | 210 | 615.00 * (W352) | 155 | 110 | 45 |

* For continuous operation 100 % ED.

## Permanent-magnetic lifting tool with flexible shaft

**Design:** With flexible, chrome-plated shaft and internal steel spindle and plastic handle.

**Application:** To remove steel chips, screws and other parts.

| Order No. | Magnet Ø mm | 3972 | Overall Ø mm | Total length mm | Holding force N |
|---|---|---|---|---|---|
| 0012 | 9 | 14.35 | 12 | 460 | 10 |
| 0015 | 12 | 18.85 (W516) | 15 | 520 | 18 |

## Magnetic lifting tool with flexible shaft

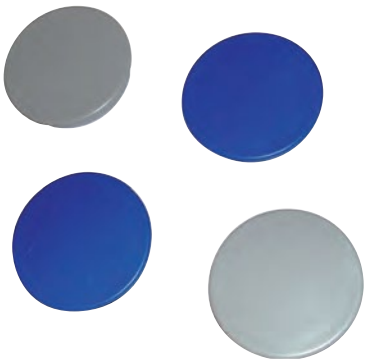
**Design:** Made of chrome-vanadium steel, with flexible shaft and ergonomic plastic handle.

| Order No. | Magnet Ø mm | 6523 | Overall Ø mm | Total length mm | Holding force N |
|---|---|---|---|---|---|
| 0009 | 8 | 35.05 | 11 | 475 | 11 |
| 0018 | 15 | 39.15 (W529) | 18 | 545 | 45 |

## Organising magnet, round and flat

**Design:** High-quality plastic cap of flat design. It provides a good basis for printing or bonding any symbols or logos.

| Order No. | Ø mm | 3991 | Height mm | Holding force N | Colour |
|---|---|---|---|---|---|
| 0725 | 25 | 0.50 | 7 | 4 | grey |
| 0726 | 25 | 0.50 | 7 | 4 | blue |
| 0740 | 40 | 0.79 | 8 | 10 | grey |
| 0741 | 40 | 0.79 (W354) | 8 | 10 | blue |



## Organising magnet with imprint

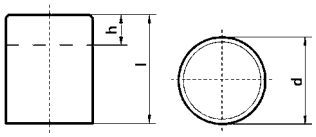
**Design:** High-quality plastic cap in flat design, with "PREMIUM format GROUP" - imprint.

| Order No. | Ø mm | 3991 | Height mm | Holding force N |
|---|---|---|---|---|
| 0750 | 30 | 1.04 (W352) | 8 | 6 |

## Round holding magnet

**Design:** Made of AlNiCo 500 material. In smooth design with fitting tolerance of h 6. Steel housing, well shielded. Max. operating temperature is max. 450 °C. **The total length "l" can be shortened by the dimension "h", without reducing the holding force.**

**Application:** For press fitting or gluing in.



| Order No. | Ø d mm | 3974 format | Height l mm | Max. shortening h mm | Holding force N | Weight g |
|---|---|---|---|---|---|---|
| 0006 | 6 | 3.72 | 10 | 2 | 2 | 2 |

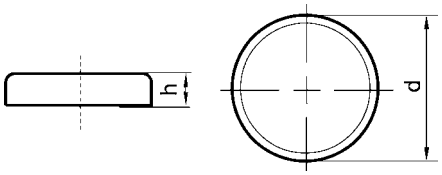
| 0085 | 32 | 11.70 (W352) | 7 | 350 | 40 |

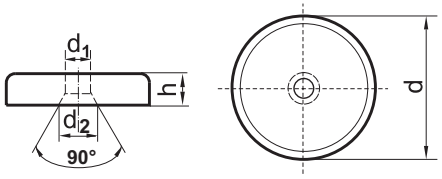


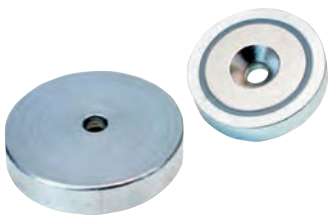
## Neodymium magnetic flat grippers with through hole and countersinking NEW

**Design:** Made of neodymium, surface galvanised and shielded, with through hole and 90° countersinking. The recommended operating temperature is max. 80 °C.

**Application:** For easy installation in jigs. Installation is carried out by gluing in or press fitting.

| Order No. | Ø d mm | 3976 format | Magnet height h mm | Hole Ø $d_1$ mm | Countersink diameter $d_2$ mm | Holding force N | Weight g |
|---|---|---|---|---|---|---|---|
| 0090 | 16 | 3.83 | 4.5 | 3.5 | 6.6 | 75 | 6 |
| 0095 | 20 | 5.20 | 6 | 4.5 | 9.3 | 105 | 13 |
| 0100 | 25 | 7.05 | 7 | 4.5 | 9 | 160 | 24 |
| 0105 | 32 | 11.15 | 7 | 5.5 | 11 | 310 | 39 |
| 0110 | 40 | 15.20 (W352) | 8 | 5.5 | 10.3 | 500 | 73 |





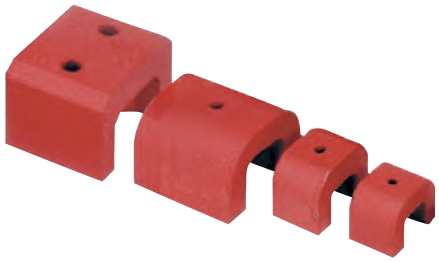
## Strong horseshoe magnet

**Design:** Made of AlNiCo 500. Bridge shape magnet with high holding power and hole for mounting. With back iron plate.
**Operating temperature:** Magnet: 450 °C
Colour: 300 °C

**Application:** For lifting, positioning, holding, aligning, etc.

| Order No. | Width mm | 3977 format | Height mm | Hole mm | Holding force N |
|---|---|---|---|---|---|
| 0030 | 30 | 8.30 | 20 | 5.2 | 45 |
| 0040 | 40 | 14.60 | 25 | 5 | 90 |
| 0045 | 45 | 21.00 | 30 | 5 | 118 |
| 0057 | 57.2 | 48.90 (W352) | 34.9 | 7.9* | 235 |

* With two through-holes.



## Pot magnet

**Design:** Made of AlNiCo 500. Shielded, with tapped blind hole for mounting. With back iron plate.
**Operating temperature:** Magnet: 450 °C
Colour: 300 °C

**Application:** For installation in jigs, for holding, clamping, assembling, etc.

| Order No. | ∅ mm | 3978 format | Height mm | Thread | Holding force N |
|---|---|---|---|---|---|
| 0017 | 17.5 | 2.83 | 16 | M6 | 26 |
| 0020 | 20.6 | 3.57 | 19 | M6 | 40 |
| 0027 | 27 | 6.55 | 25 | M6 | 61 |
| 0035 | 35 | 11.15 | 30 | M6 | 147 |
| 0065 | 65 | 50.00 (W352) | 43 | M12 | 400 |

## Flat pot magnet

**Design:** Made of AlNiCo 500. Shielded, with tapped blind hole for mounting and countersinking on the contact surface. With back iron plate.
**Operating temperature:** Magnet: 450 °C
Colour: 300 °C

**Application:** For installation in jigs and holding.

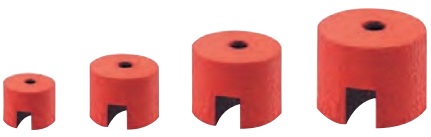
| Order No. | ∅ mm | 3979 format | Height mm | Hole mm | Holding force N |
|---|---|---|---|---|---|
| 0019 | 19.1 | 3.29 | 7.5 | 3.7 | 30 |
| 0028 | 28.6 | 5.55 | 8.5 | 4.8 | 50 |
| 0038 | 38.1 | 9.60 (W352) | 10.4 | 4.8 | 130 |

## Button magnet

**Design:** Made of AlNiCo 500. With a divided magnetic contact surface and through-hole for mounting. With back iron plate.
**Operating temperature:** Magnet: 450 °C
Colour: 300 °C

**Application:** For positioning, holding and for laboratory purposes.

| Order No. | ∅ mm | 3980 format | Height mm | Hole mm | Holding force N |
|---|---|---|---|---|---|
| 0012 | 12.7 | 2.30 | 9.5 | 4.4 | 7 |
| 0019 | 19.1 | 3.36 | 12.7 | 4.8 | 19 |
| 0025 | 25.4 | 7.50 | 15.9 | 4.8 | 34 |
| 0031 | 31.8 | 14.35 (W352) | 25.4 | 7.1 | 48 |

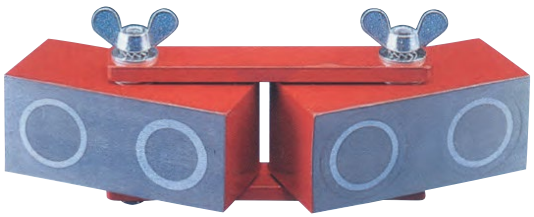


## BM Adjustable magnetic positioner

**Design:** Two magnetic blocks connected by a joint, clampable at every angle, each with magnetic surface. Fixation is carried out using wing nuts.
**Operating temperature:** Magnet: 450 °C
Colour: 300 °C

**Application:** As welding and mounting aids to hold sheet metals and flat irons.

**Note:** Individual magnetic blocks on request.

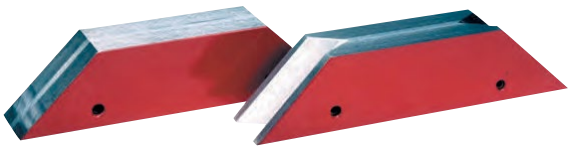


| Order No. | Length mm | 3982 | Block dimensions mm | Holding force N |
|---|---|---|---|---|
| 0010 | 125 | 38.10 | 60 x 25 x 25 | 150 |
| 0020 | 190 | 85.00 (W350) | 90 x 40 x 40 | 250 |

## BM permanent-magnetic mitre clamps

**Design:** All 4 front faces are magnetic.
**Operating temperature:** Magnet: 450 °C
Colour: 300 °C

**Application:** As welding and mounting aid for frame processing.

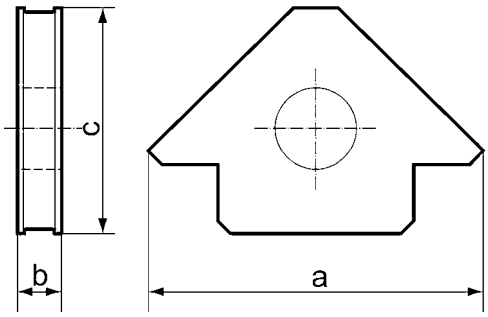


| Order No. | Design | 3984 | Length mm | Width mm | Height mm | Vee-block | Holding force N |
|---|---|---|---|---|---|---|---|
| 0010 | Flat | 112.50 | 170 | 35 | 40 | – | 250 |
| 0020 | prismatic | 160.50 (W350) | 170 | 35 | 40 | 90° | 250 |

## Permanent multiple angle magnet

**Design:** Fixed angle at 45° and 90°.

**Application:** As welding and mounting aid for flat and round workpieces.



| Order No. | a mm | 3985 | b mm | c mm | Holding force N |
|---|---|---|---|---|---|
| 0010 | 120 | 10.50 | 15 | 82 | 110 |
| 0020 | 160 | 18.00 (W352) | 20 | 100 | 220 |

## BM permanent lifting magnet

**Design:** The permanent lifting magnets features a strong and powerful high-energy magnet system neodymium. The low dead weight and the prismatic pole surfaces which can also be optionally re-ground, ensure high service life and optimal application options. The actuating lever safety lock guarantees that the lifting magnets cannot be switched off without external action during operation. Manufactured according to current EU Machinery Directive.

**Application:** For transporting, lifting and fixing round and flat materials made from a wide range of ferromagnetic materials.

**Scope of delivery:** With operating instructions, test certificate und EC Declaration of Conformity.

| Order No. | Dimensions L x W x H mm | 3989 | Total height mm | Recommended flat material lifting force kN | Recommended round material lifting force kN | Tested lifting force kN | Adapter for round material, Ø mm | Weight kg |
|---|---|---|---|---|---|---|---|---|
| 0010 | 188 x 80 x 75 | 770.00 | 152 | 2.5 | 1 | 8* | 40–350 | 7 |
| 0020 | 262 x 100 x 95 | 1159.00 | 185 | 5 | 2.5 | 16* | 60–400 | 17 |
| 0030 | 360 x 140 x 135 | 1961.00 (W355) | 235 | 10 | 5 | 35* | 80–400 | 42 |

* Measured on a steel plate St37, ground, 60 mm thick.

**Safety notice:** For safety reasons, a coefficient of 1:3 is recommended for the tested lifting force to accommodate variable conditions like surface quality, material alloy and board thickness of the workpieces. The stated lifting capacities should therefore be regarded as guide values.

## Magnetic tape

**Design:** Magnetic tape with coloured PVC coating.

**Note:** Further dimensions and colours available on request.

| Order No. | Width mm | 3991 | Colour | Roll lengths m | Thickness mm |
|---|---|---|---|---|---|
| 0020 | 20 | 47.10 | white | 30 | 0.6 |
| 0030 | 20 | 56.70 | yellow | 30 | 0.6 |
| 0040 | 20 | 56.70 | blue | 30 | 0.6 |
| 0120 | 30 | 63.50 | white | 30 | 0.6 |
| 0130 | 30 | 78.20 | yellow | 30 | 0.6 |
| 0140 | 30 | 78.20 | blue | 30 | 0.6 |
| 0220 | 40 | 82.80 | white | 30 | 0.6 |
| 0230 | 40 | 99.80 | yellow | 30 | 0.6 |
| 0240 | 40 | 99.80 (W354) | blue | 30 | 0.6 |

## Magnetic labels

**Design:** Magnetic labels with white PVC coating.

**Note:** Further designs available upon request.

| Order No. | Dimensions L x W mm | 3991 | Colour | Thickness mm |
|---|---|---|---|---|
| 0520 | 100 x 20 | 17.70 | white | 0.6 |
| 0530 | 100 x 30 | 26.50 (W354) | white | 0.6 |

# Mahr

# Specialists in the world of measuring technology

**Global.** As the innovation leader and one of the world's largest manufacturers of measuring technology, Mahr offers application-oriented and reliable solutions.

**Versatile.** Mahr offers a broad range of products in the field of precision gauges as well as in surface and form metrology. The same applies to the measurement of shafts, gear wheels and tools.

**Experienced.** Mahr offers solutions for various measuring tasks and traditionally meets the requirements of several fields of industry in terms of quality, safety and sustainability – for more than 150 years.

4/12

4/33

4/43

# Specialist for industry and craft

**Service.** With its comprehensive and globally connected service network, Mahr offers various services: starting with the procurement of spare parts, extending to measuring equipment management and calibrations in accordance with DIN EN ISO 17025.

**Competencies.** In production metrology, Mahr combines experience, innovation and commitment. Process-oriented solutions are becoming ever-more significant in this respect – in collaboration with customers from all areas of the processing industry. This includes for instance automotive and aerospace technology, medical and electrical engineering as well as mechanical engineering and optical technology.

**Quality assurance.** Precision and productivity form a unit in mechanical engineering. Mahr's proven measuring technology contributes to optimising the production processes of low as well as high volumes. In the areas of turning, grinding, milling, drilling, honing, laser and eroding, the products meet the growing requirements of production metrology – with customer- and application-appropriate solutions. They offer budget-oriented quality assurance and generate a valuable competitive edge with continuously improved quality and reduced production costs.

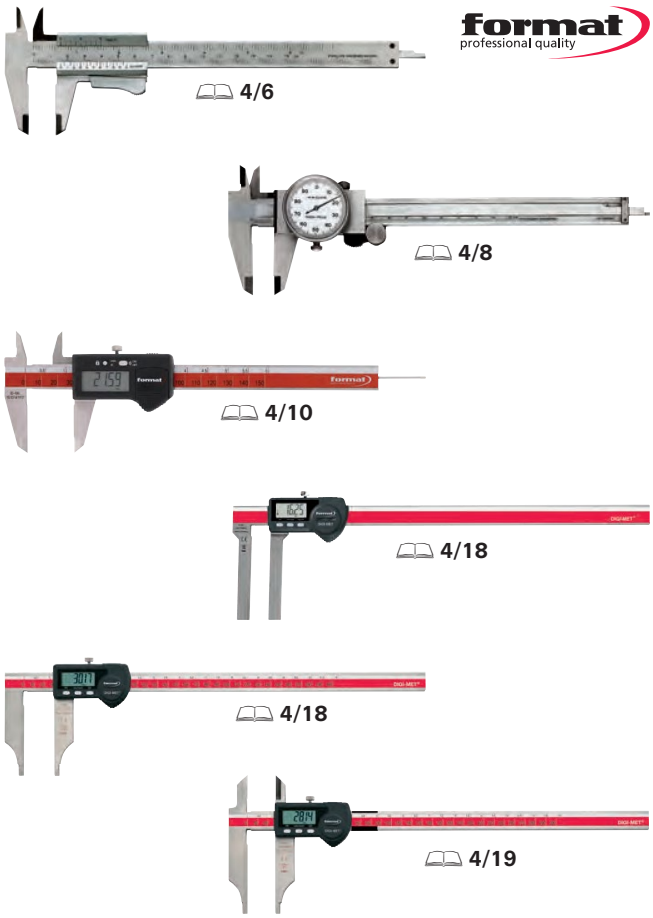
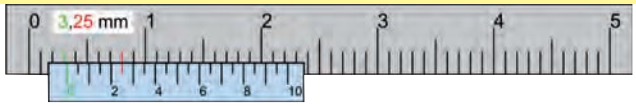
## Guaranteed good beyond all measures

First rate precision with FORMAT measuring technology. Whether mechanical or digital, with FORMAT pocket calipers, measurements are exact.

All FORMAT calipers meet the highest quality requirements and are characterised by particular accuracy.

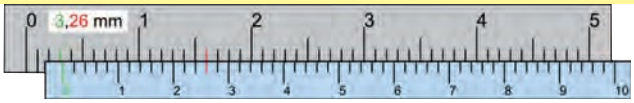


## Vernier reading 0.05 mm with 1/20 division



**Vernier 1/20 has a measurement value of 0.05 mm, that means 3 graduation marks on the vernier mean 3 x 0.05 mm = 0.15 mm.**

## Vernier reading 0.02 mm with 1/50 division



Vernier 1/50 has a measurement value of 0.02 mm, that means 3 graduation marks on the vernier mean 3 x 0.02 mm = 0.06 mm. With this accuracy, a threshold is reached, which is just barely readable without aid to the human eye.

## Slide, brass

**Design:** Made of solid brass. Readings in mm and English inches.

EASY MEASURING,
EXACT WORKING!

## Protection class overview

| First Digit | Importance for protection of operating equipment |
|---|---|
| 0 | Not protected |
| 1 | Protection against penetration by solid foreign bodies With a diameter larger than 50 mm |
| 2 | Protection against penetration by solid foreign bodies With a diameter larger than 12.5 mm |
| 3 | Protection against penetration by solid foreign bodies With a diameter larger than 2.5 mm |
| 4 | Protection against penetration by solid foreign bodies With a diameter larger than 1 mm |
| 5 | Protected against dust |
| 6 | Dust-tight |

| Second Digit | Water protection |
|---|---|
| 0 | Not protected |
| 1 | Protection against vertical drips |
| 2 | Protection against dripping water with 15° incline |
| 3 | Protection against water spray |
| 4 | Splashproof |
| 5 | Protection against jets of water |
| 6 | Protection against strong jets of water |
| 7 | Protection against temporary submersion |
| 8 | Protection against prolonged submersion |

**Example:** measuring instrument with protection
**IP 67:** (IP – International Protection).
This is a dust-proof measuring device that can be briefly submerged.

## Digital universal caliper

Factory standard | INOX | IP 65 | format professional quality
Absolute function | RS232 | USB | Digimatic

**Design:** Made of stainless steel, hardened, measuring faces precision ground, with locking screw, digit height of LCD display 8.5 mm for 300 mm and 12.5 mm over 500 mm measuring range, inductive measurement system, with data output variable RS 232, USB and Digimatic (DATA Variable). Supplied with battery CR 2032, 3 V, in a wooden case.

**Functions:** On and automatic off switch, mm/inch switching, automatic switching by means of slider movement, key lock set for zero position, no re-zeroing after switching (absolute system), reset (zeroing) possible at each position, ± pre-set function (measurement value presetting).

**Application:** For diverse measuring tasks, quickly retrofittable to the appropriate measurement, suitable for all measuring inserts with thread M2.5.

**Note:** Supplied without measuring inserts and without adjustment measurement.
Interchangeable steel measuring insert (Order No. 4236, 📖 4/49).
Interchangeable carbide measuring insert (Order No. 4237, 📖 4/49).
Extension piece for measuring insert (Order No. 4238, 📖 4/50).
Replacement battery (Order No. 4026 2032, 📖 4/13).
Data cable USB (Order No. 4025 0003, 📖 4/13).
Data cable Digimatic (Order No. 4025 0004, 📖 4/13).
Data cable RS 232 available on request.

## Digital workshop calipers without tips, with fine adjustment

Factory standard | INOX | Absolute function | opto RS232

**Design:** Made of stainless steel, with locking screw, digit height of LCD display 12 mm, with data output Opto RS 232. Supplied with battery CR 2032, 3 V, in plastic case, over measuring range 1000 mm in transport packaging.

**Functions:** On and off switch, mm/inch switching, key lock set for zero position, re-zeroing after switching deleted (absolute system), reset (zeroing) possible at each position, hold function (measurement memory).

**Application:** For inside and outside measurements.

**Note:** Replacement battery: (Order No. 4026 2032, 📖 4/13).

## Depth gauge

Factory standard

**Design:** The measuring bridge matt chrome-plated and hardened. Support surface finely lapped. The clamping collet made of metal guarantees reliable clamping of the dial gauge and thus increases the measurement certainty. An additional socket head screw makes it easier to replace the dial gauge. Measuring insert with external thread M2.5.
The millimetre display on Order No. 4093 0030 has a concentric layout, permitting a simple and reliable reading. Supplied with a 10 mm-long special measuring insert and measuring bridge 80 x 16 mm, in plastic case.

**Note:** You can find suitable measuring inserts on 📖 4/49.

| Order No. | Measurement range mm | 4093 Käfer | Reading mm | Housing ∅ mm | Support surface mm | 1 pointer revolution mm |

## Outside micrometer

**Design:** Reading parts matt chrome plated, measuring surfaces carbide-tipped, light metal frame, painted. With clamping lever, measuring force control by means of ratchet stop and hand thermal protection. With replaceable inserts and anvils. Supplied with adjusting dimensions, in wooden case, over measuring range 300-400 mm in transport packaging.

## Digital outside micrometer

**Design:** Measuring faces carbide-tipped, digit height of LCD display 6.5 mm. With measuring force controls by means of ratchet stop, clamping lever and hand thermal protection. Supplied with dimension adjustment, from measuring range 25–50 mm with setting measurement and battery CR 357 1.5 V, in a plastic case.

**Function:** Switch-on and switch-off, reset (zeroing) possible in any position, automatic switch-off.

**Note:** Replacement battery: (Order No. 4026 0357, 📖 4/13).

DIN 863

## Digital outside micrometer

**Design:** Measuring faces carbide-tipped, ratchet integrated in measuring drum. With clamping lever, quick drive and hand thermal protection. Digit height of the LCD 7.5 mm, inductive measuring system, with variable data output RS 232, USB and Digimatic (DATA Variable). Supplied with battery CR 2032, 3 V, in plastic case.

**Functions:** On and automatic off switch, mm/inch switching, automatic switching by means of turning the drum, key lock set for zero position, **re-zeroing after switching deleted (absolute system)**, reset (zeroing) possible at each position, ± pre-set function (setting a numerical value).

**Note:** Replacement battery: (Order No. 4026 2032, 📖 4/13).
Data cable Digimatic (Order No. 4025 0004, 📖 4/13).
Data cable USB (Order No. 4025 0003, 📖 4/13).
Data cable RS 232 available on request.

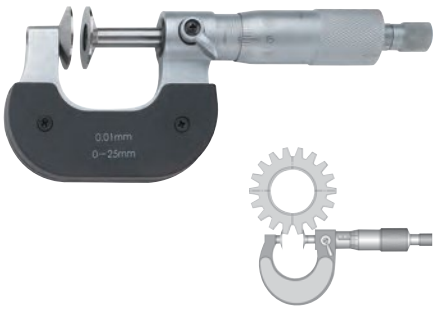
## Outside disc micrometer for tooth width measurements

DIN 863

format professional quality

**Design:** Reading parts matt chrome-plated, hardened spindle, lapped measuring plane-parallel plate, measuring force regulation by means of ratchet stop, with hand thermal insulation, locking by means of clamping lever. Supplied with adjustment key, in a plastic case.

**Application:** For reference-free measuring tooth widths of spur gears and toothed wheels for modules 0.5–6.0 mm. Also suitable for measuring the thickness of soft materials such as rubber, plastic, paper, etc.



| Order No. | Measurement range mm | 4120 format | Reading mm | Spindle Ø mm | Gradient mm | Drum Ø mm | Measuring plate mm |

| 4100 | 75–100 | 504.00 | 0.01 | 6.5 | 19.0 |
| | | (W488) | | | |

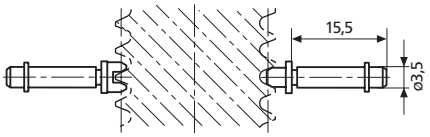
## Thread measuring inserts

NEW

**Design:** Made of wear-resistant special steel, hardened. With cylindrical mounting shank and retainer ring which allows free rotation inside the bore of measuring spindle and anvil. Supplied in pairs with rear sight and cone.

**Note:** For inclinations 0.20–0.45 mm the rear sight overbridges 3 gears. Setting therefore with thread adjustment pins, otherwise with dimensions adjustments.

DIN 863-3



Mahr

## Digital outside micrometer for measuring inserts

NEW

**Design:** Measuring spindle and anvil rustproof, fully hardened and ground, carbide reinforced, chrome-plated steel bracket, advance ratchet stop, quick drive and thermal protection. Digit height of the LCD display 8.5 mm, protection in acc. with IP 65, data output via radio transmission (with optional transmitter module) RS 232, Digimatic and USB. With mounting shaft for measuring inserts 3.5 mm. Supplied with battery CR 2032, 3 V, in case.

**Functions:** On and automatic off switch, mm/inch switching, automatic switching by means of turning the drum, key lock set for zero position, re-zeroing after switching deleted (absolute system), ABS (switching from relative to absolute measurement), reset (zeroing) possible at each position, ± pre-set function (setting a numerical value).

**Note:** Replacement battery: (Order No. 4026 2032, 📖 4/13).
Radio receiver (Order No. 4942 0030, 📖 4/129).
Transmitter module for e-Stick (Order No. 4942 0040, 📖 4/130).
Data cable RS 232 (Order No. 4942 0055, 📖 4/130).
Data cable USB (Order No. 4942 0050, 📖 4/130).
Data cable Digimatic (Order No. 4246 0185, 📖 4/54).

## Inside measuring device with automatic centring

NEW

Mahr

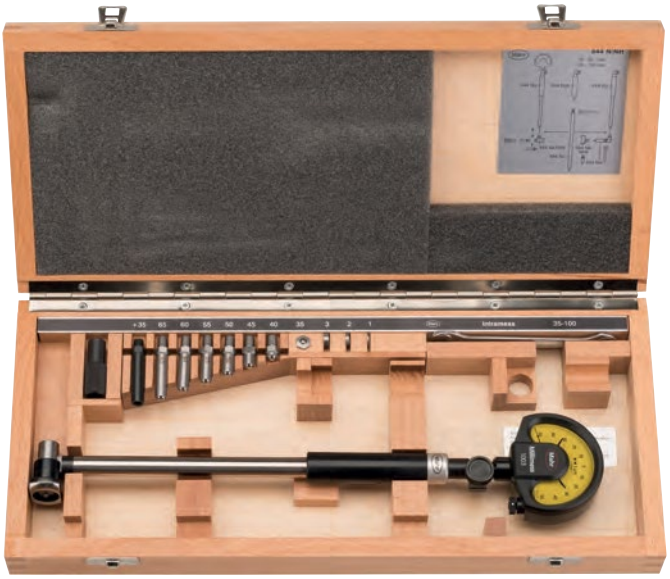
**Design:** Carbide reinforced measuring surfaces, constant measuring force via integrated measuring force spring. Broad centring bridge for automatic centring in hole. With exchangable contact with hardened steel ball. Measuring pin movements are transferred via the ring segment to the display device. Device shaft and transmission rod made of Invar steel (resistant against all heat influences, warm hands do not impact the measuring result). Supplied with measuring device holder, measuring probe and contact, in wooden case.

**Application:** For quick measurement of various hole properties.



| Order No. | Measurement range mm | 4146 Mahr | Measuring probe path mm | Measuring depth mm |

## Digital inside micrometer

NEW

Mahr

DIN 863-4 | IP 52 | Absolute function | RS232 | USB | Digimatic

**Design:** With 3-line, self-centring measuring head, measuring probe from 12 mm carbide reinforced. From 40 mm measuring head made of aluminium to save weight, digit height of LCD display 8.5 mm, data output variable with wireless connection (with optional transmitter module), RS 232, Digimatic and USB. Supplied with basic unit, measuring head and battery CR 2032, 3 V, in case.

**Functions:** With mm/inch switching, automatic switching by means of turning the drum, key lock set for zero position, re-zeroing after switching deleted (absolute system), ABS (switching from relative to absolute measurement), reset (zeroing) possible at each position, ± pre-set function (setting a numerical value), ABS (switching from relative to absolute measurement).

**Note:** Replacement battery: (Order No. 4026 2032, 📖 4/13).
Radio receiver (Order No. 4942 0030, 📖 4/129).
Transmitter module for e-Stick (Order No. 4942 0040, 📖 4/130).
Data cable RS 232 (Order No. 4942 0055, 📖 4/130).
Data cable USB (Order No. 4942 0050, 📖 4/130).
Data cable Digimatic (Order No. 4246 0185, 📖 4/54).

## Measuring insert for dial gauges and precision indicators

**Design:** With external thread M2.5. All dial gauges and precision indicators are standard supplied with measuring insert No 1 made of hardened steel.

**4236** Steel

**4237** Carbide tipped

| Order No. | Illust-ration | 4236 Käfer | 4237 Käfer | Design |

## Digital dial gauge

**Design:** Digit height of LCD 12 mm. With interchangeable stylus tips M2.5. Clamping shaft ∅ 8 mm. Delivered with battery CR 2032, 3 V, in transport packaging.

**Functions:** On and off switch, mm/inch switching, key lock set for zero position, re-zeroing after switching deleted (absolute system), reset (zeroing) possible at each position.

**Note:** Suitable measuring inserts M2.5 are found on 📖 4/49.
Replacement battery (Order No. 4026 2032, 📖 4/13).

## Digital dial gauge

NEW

Factory standard | IP 42 | Absolute function

RS232 | USB

Digimatic

Mahr

**Design:** Clamping shaft and measuring bolts made of rustproof, hardened steel. Digit height on LCD display 8.5 mm, operating and display part can be rotated by 280°. With interchangeable stylus tips M2.5. Clamping shaft Ø 8 mm, protective cap at end of measuring bolt. With data output via radio transmission, RS 232, USB and Digimatic. Supplied with battery CR 2450, 3 V.

**Functions:** Automatic on and off switch, mm/inch switching, automatic activation by moving switch, key lock set for zero position, re-zeroing after switching deleted (absolute system), MAX/MIN storage for reversal point search, tolerance entry, ABS (switching from relative to absolute measurement), reset (zeroing) possible at each position, counting direction change, ± pre-set function (setting a numerical value).

**Application:** The reversal point is automatically determined by a 2-point inside or outside measurement through oscillation, than a preset value can be simply assigned to it. During the measurement. the measured ACTUAL value is saved by the MIN or MAX function and shown in the display. In order to perform measuring movements with corresponding measuring accuracy, 64 measurement values are processed per second.

**Note:** Suitable measuring inserts M2.5 are found on 📖 4/49.

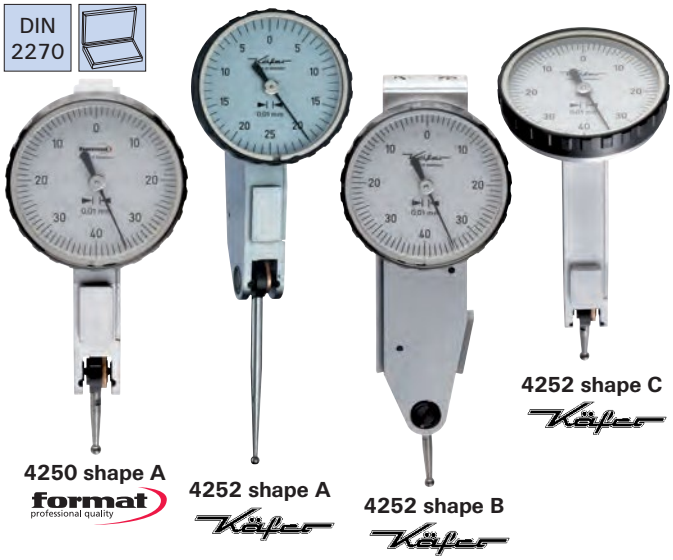
## Precision lever gauge

**Design:** Housing for protection of the dovetail guides hard chrome-plated, resistant against impacts, bearing for lever gauge shaft in precision ball bearings, movements bearing supported with rubies, automatic switching of measuring direction, housing with three milled dovetail guides for holding the clamping shaft (Ø 8 mm h6), measuring insert M1.6 with 2 mm Ø carbide-tipped, rotating outer ring. Supplied with key, in plastic case.

**Application:** To check the concentricity of shafts and sleeves, for centring bore holes, alignment of surfaces and parallelism inspections.

DIN 2270



4250 shape A (format) | 4252 shape A (Käfer) | 4252 shape B (Käfer) | 4252 shape C (Käfer)

## Lever gauge

NEW

**Design:** High-contract dial, sealed with O ring, safety disk made of mineral glass for highest protection against breakage, scratching, hot chipping as well as the highest resistance solvents, matt-chrome=plated protective housing with 3 integrated dovetail guideways, shockproof measuring unit, antimagnetic design, automatic adjustment to the probe direction, causing error-free reading, ball-bearing mounted double lever, overload protection by means of slip clutch, measuring insert with carbide ball. Supplied with key to exchange measuring inserts, measuring insert Ø 2 mm, clamping shaft (Ø 8 mm h6), in case.

**Application:** Measurement of concentricity, axial runout, parallelism and evenness deviations, centring of shafts or holes, parallel or right-angled alignment of workpieces.

## Digital lever gauge

NEW

Mahr

Factory standard | IP 65 | RS232 | USB | Digimatic

**Design:** Inductive measurement system, the display is water and cooling-agent resistance, combined digit and scale display, operating and display part can be rotated by 360°, matt chrome-plated protective housing with 3 dovetail guideways, shockproof measuring unit, axles mounted in precious stones, automatic adjustment of probe direction, antimagnetic design, ball-bearing mounted double lever, overload protection by means of slip clutch. With data output RS 232, USB and Digimatic. Supplied with clamping shaft, key to exchange measuring inserts, measuring insert Ø 2 mm, in case.

**Functions:** On and automatic off switching, mm/inch switching, MIN-MAX for concentricity and evenness testing.

**Application:** Measurement of concentricity, axial runout, parallelism and evenness deviations, centring of shafts or holes, parallel or right-angled alignment of workpieces.

**Note:** Replacement battery: (Order No. 4026 2032, 📖 4/13, 9/12).
Data cable RS 232 (Order No. 4942 0055, 📖 4/130).
Data cable USB (Order No. 4942 0050, 📖 4/130).
Data cable Digimatic (Order No. 4246 0185, 📖 4/54).

## Display device Millimar C1208 M / C1216 M

NEW

IP 42 | RS232

Mahr

**Design: Background-lit LCD display, 115 mm x 70 mm**, with scale display and two-digit digital display, 5 three-colour status lamps for warning and tolerance limits, up to 2 features can be shown at the same time, additional resolution of 0.01 µm for a measurement range of ± 200 µm (only 4259 0445), 2 inputs for inductive probes, data output via radio transmission or cable-based via RS 232, 3 digital inputs for measurement start, master measurement, measurement value transmission, 3 digital outputs for go, no-go, rework, measuring time, programmable analogue output voltage (only 4259 0445, max. ± 5 V). Supplied with AC adapter.

**Functions:** Favourites, with the SELECT button, frequently used settings can be called directly, static measurements ± A, ± B and all combinations, dynamic measurements: Max, Min, Max-Min, Max+Min, average value, auto-detect mode. Programmable via integrated keyboard or RS 232 interface via MS Windows configuration software.

**Note:** Radio receiver (Order No. 4942 0030, 📖 4/129).
Transmitter module for e-Stick (Order No. 4942 0040, 📖 4/130).
Data cable RS 232 (Order No. 4942 0055, 📖 4/130).

## Small measuring stand

**Design:** With round, non-switchable magnetic base, locking screw for the swivel arm. Measuring device is clamped using a knurled nut. Dial gauge adaptor Ø 8 mm.

**Application:** For clamping dial gauges and lever gauges, particularly suitable in constricted spaces.

**Note:** Supplied without dial gauge. Dial gauges are found from 📖 4/45.

| Order No. | Projection mm | 4285 format | Magnet Ø mm | Total height mm | Adhesive force N | Stand Ø mm | Magnetic base thread |

## Magnetic articulated measuring stand

**Design:** Five-axis articulated measuring stand, central locking with spring-mounted clamping. With powerful magnet with prism sole which can be switched on and off, fast clamping in any position. Arms made of red anodised, high-strength aluminium alloy, can be combined as required. **With fine adjustment on magnetic base for constricted spaces and areas which are hard to access,** zero setting takes place quicker than when using any other fine adjustment. With dial gauge Ø 8 mm and dovetail adaptor. Supplied in transport packaging.

**Application:** For clamping dial gauges, precision indicators, lever gauges and measuring probes.

**Note:** Dial gauges are found from 📖 4/45.

## Single parallel gauge block

**Design:** High alloy steel, minimum hardness of 800 HV. Coefficient of linear expansion: (11.5 ± 1.0) x $10^{-6}$ $K^{-1}$. Maximum dimensions and shape stability due to careful **artificial aging.** Wear-resistant and has very good adhesion properties when pushing.

**Each gauge block is marked with an individual ID No.**

For lengths
0.5 to 10.0 mm, the height is 30 mm and the depth 9 mm.
For 10.0 to 1000.0 mm, the height is 35 mm and the depth 9 mm.

DIN EN ISO 3650

**4350** **Tolerance class 0:** Calibration of other gauges and measuring devices in air-conditioned measurement laboratory.

**4351** **Tolerance class 1:** Most often-used standard in the measurement room for the inspection of gauges and for setting measuring instruments.

**4352** **Tolerance class 2:** Most often-used working standard in production for the inspection of gauges and for setting measuring instruments.

(W436)

## Gauge block test set for caliper

**Design:** Made of high-quality, specially alloyed and unstressed special steel of high stability and good adhesive properties. The hardness of the gauge blocks is 800 HV (64 HRC), making them highly stable and exceptionally wear resistant. Each gauge block is marked with an individual ID number. Supplied in a wooden box.

**Tolerance class 1:** Most often-used standard in the measurement room for the inspection of gauges and for setting measuring instruments.

For lengths
0.5 to 10.0 mm, the height is 30 mm and the depth 9 mm.
For 10.0 to 1000.0 mm, the height is 35 mm and the depth 9 mm.

**Application:** For verification in acc. with VDI/VDE/DGQ Z 2618, Sheet 8, of calipers.

## Screw plug gauge

**Design:** Made of hardened gauge steel, tolerance class 6H, with go and no-go sides (from thread M42 only go or no-go side). For metric ISO regular threads **DIN 13.**

**Application:** For inspecting threads.

**Note:** In order to prevent premature breaking away of the thread gear, the first thread gear is ground and removes coarse dirt. Intermediate dimensions and other tolerances available on request.

* Thread go plug gauge.
** Thread no-go plug gauge

## Thread gauge for UNC coarse thread

**Design:** Made of hardened gauge steel. Gauge dimensions according to ANSI/ASME B1.2. For UNC coarse thread.

**Application:** For inspecting threads.

**Note:** In order to prevent premature breaking away of the thread gear, the first thread gear is ground and removes coarse dirt. Intermediate dimensions and other tolerances available on request.

**4428** **Thread limit plug gauge.** Tolerance class 2B. With go and no-go sides.

**4429** **Thread go ring gauge.** Tolerance class 2A.

**4430** **Thread no-go gauge ring.** Tolerance class 2A.

## Thread gauge for UNF fine-pitch thread

**Design:** Made of hardened gauge steel. Gauge dimensions according to ANSI/ASME B1.2. For UNF fine-pitch thread

**Application:** For inspecting threads.

**Note:** In order to prevent premature breaking away of the thread gear, the first thread gear is ground and removes coarse dirt. Intermediate dimensions and other tolerances available on request.

**4433** **Thread limit plug gauge.** Tolerance class 2B. With go and no-go sides.

**4434** **Thread go ring gauge.** Tolerance class 2A.

**4435** **Thread no-go gauge ring.** Tolerance class 2A.

## Thread gauge for NPT tapered pipe thread

**Design:** Made of hardened gauge steel. Gauge dimensions according to ANSI/ASME B1.20.1. Thread gauge for NPT tapered pipe thread, taper 1:16.

**Application:** For threads with sealant.

**Note:** In order to prevent premature breaking away of the thread gear, the first thread gear is ground and removes coarse dirt. Intermediate dimensions and other tolerances available on request.

## Thread gauge for Whitworth pipe thread

**Design:** Made of hardened gauge steel. Gauge dimensions according to DIN EN ISO 228-2. For Whitworth pipe thread.

**Application:** For inspecting threads.

**Note:** In order to prevent premature breaking away of the thread gear, the first thread gear is ground and removes coarse dirt. Intermediate dimensions and other tolerances available on request.

## Twist drill grinding gauge

**Application:** For controlling the cutting edges on twist drills with 118° point angle.

| Order No. | For twist drills up to Ø mm | 4451 format |
|---|---|---|
| 0050 | 50 | 2.14 (W447) |

## Angled thread cutter gauge

**Design:** Marked with dimensions and different recesses.

**Application:** For inspecting the grinding on lathe tools and for setting up the steels on the support.

| Order No. | For thread | 4453 format |
|---|---|---|
| 0055 | WW 55° | 3.53 |
| 0060 | M60° | 3.32 (W447) |

## Trapezoidal thread steel gauge

**Design:** With 30° recess, cleanly milled.

**Application:** For measuring trapezoidal gauges of 2–12 mm pitch and flange angle.

DIN 103

| Order No. | 4455 format |
|---|---|
| 0001 | 3.63 (W447) |

## Lathe tool and thread steel gauge

**Design:** For trapezoidal Whitworth and metric threads. For angles of 0–30° und 40–80°. Supplied individually packed.

DIN 103

| Order No. | Dimensions mm | 4457 format | Thickness mm |
|---|---|---|---|
| 0001 | 90 x 40 | 12.90 (W447) | 2 |

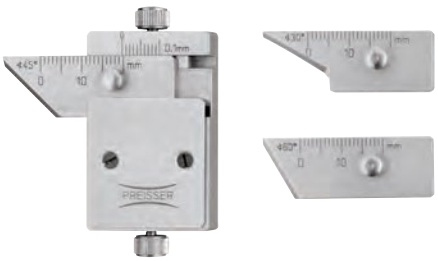
## Chamfer measuring instrument

NEW

**Design:** Made of chrome-plated special steel, for verification of chamfers on workpieces, with exchangeable dimension rails, for chamfers with 30°, 45° and 60°. The attachment side is adjustable, with locking screw for dimension rail and attachment side. Supplied with test rulers 30°, 45° and 60° in a wooden box.

**Application:** For the exact measurement of chamfering.

| Order No. | Measurement range mm | 4460 HELIOS·PREISSER | Dimension mm | Reading mm |
|---|---|---|---|---|
| 0001 | 0–10 | 176.50 (W410) | 48 x 30 x 9 | 0.1 |

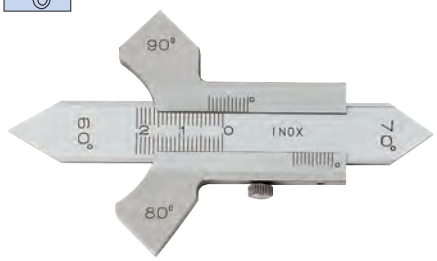


## Weld seam gauge with slide

**Design:** Made of special steel. Supplied in plastic case.

**Application:** For measuring flat weld seams and weld seams in corners as well as the V-seam angles 60°/70°/80° and 90°.

| Order No. | Measurement range mm | 4461 format | Reading mm |
|---|---|---|---|
| 0020 | 20 | 34.90 (W447) | 0.1 |



## Weld seam gauge

**Design:** With 12 polished sheets arranged in a fan shape on the ring.

**Application:** For measurement of the weld seams on the right angle welded corners.

| Order No. | Measurement range mm | 4463 format |
|---|---|---|
| 0012 | 3–12 | 20.40 (W447) |

## Weld seam template

**Design:** Measuring tool made of rustproof steel for simple and fast inspection of weld seam dimensions. Measurement errors are mainly resolved through one-side application of the gauge. Supplied in plastic case.

| Order No. | Reading mm | 4463 format |
|---|---|---|
| 0020 | 0.1 | 119.00 (W447) |

## Thread pitch gauge

**Design:** Made of steel, with precisely milled teeth.

**Application:** For checking the pitch on male and female threads.

| Order No. | Thread | 4467 format | Gradient mm | Threads inch | Number of faces |
|---|---|---|---|---|---|
| 0050 | metric | 4.23 | 0.25–6.00 | – | 24 |
| 0052 | metric + Whitworth | 5.70 | 0.25–6.00 | 4–62 | 52 |
| 0058 | metric + Whitworth + pipe thread | 7.35 | 0.25–6.00 | 4–62 | 58 |
| 0060 | UNC | 4.02 | – | 4–64 | 22 |
| 0065 | UNF | 4.02 (W447) | – | 12–80 | 16 |

## Precision nozzle gauge

**Design:** Hardened and ground, round measuring needle, nickel-plated housing. Supplied in plastic case.

**Application:** For measurements on all types of nozzles and smaller bores.

| Order No. | Measurement range mm | 4471 format | Reading mm | Taper |
|---|---|---|---|---|
| 0003 | 0–3 | 64.10 | 0.1 | 1:10 |
| 0005 | 0–5 | 85.10 (W447) | 0.1 | 1:10 |

## Plug gauge, conical

**Design:** Hardened and ground, round measuring needle made of rustproof steel, knurled handle.

**Application:** For measurements of bores.

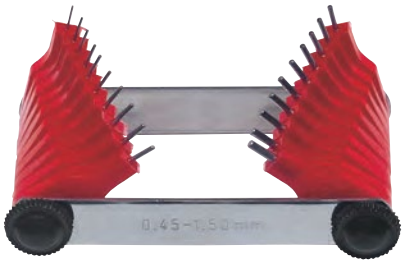
| Order No. | Measurement range mm | 4472 format | |
|---|---|---|---|
| 0006 | 1– 6 | 82.50 | |
| 0015 | 4–15 | 112.00 | |
| 0030 | 15–30 | 233.00 | |
| 0045 | 30–45 | 347.50 | |
| 0060 | 45–60 | 557.50 | |
| | | (W447) | |

## Jet gauge

**Design:** With steel pins, coated in plastic. Shell made of steel.

**Application:** For measurements on all types of nozzles and smaller bores.

| Order No. | Measurement range mm | 4473 format | Number of measuring pins |
|---|---|---|---|
| 0015 | 0.45–1.5 | 10.40 | 20 |
| 0030 | 1.50–3.0 | 10.40 | 16 |
| | | (W447) | |



## Small Hole Gauges

**Design:** Made of hardened steel.

| Order No. | Measurement range mm | 4475 format | Gradient mm | Number of holes | Surface |
|---|---|---|---|---|---|
| 0010 | 0.1–10 | 104.00 | 0.1 | 100 | Finely polished |
| 0015 | 3.0–10 | 91.40 | 0.1 | 70 | Nitrated |
| | | (W447) | | | |

## Profile gauge

**Design:** Spring-hardened pins.

| Order No. | Measurement range mm | 4476 format | Dimensions mm | Pin Ø mm |
|---|---|---|---|---|
| 0015 | 150 x 40 | 25.20 | 154 x 85 | 1.0 |
| 0030 | 300 x 60 | 77.50 | 350 x 150 | 1.0 |
| | | (W447) | | |

## Radius gauge

**Design:** Made of normal steel, radii concave and convex, with dimensions on cover sheet.
Pitch in mm:
1.0– 3 mm increasing by 0.25 mm,
3.5–20 mm increasing by 0.50 mm,
20.0–25 mm increasing by 1.00 mm.

**Application:** For inspecting inner and outer radii.

| Order No. | Radii in mm | 4479 format | Number of faces |
|---|---|---|---|
| 0007 | 1.0– 7 | 9.85 | 17 |
| 0015 | 7.5–15 | 11.80 | 16 |
| 0025 | 15.5–25 | 11.80 | 15 |
| | | (W447) | |

## ISO tolerance slide

**Design:** Made of aluminium, anodised, deep black print, sealed against scratches, with tables on the front and back.

**Application:** For direct reading of standard bore holes H6 to H13 acc. DIN 7154 from 1–160 mm Ø and standard shafts h5 to h12 acc. to DIN 7155 from 1–160 mm Ø.

| Order No. | Dimensions mm | 4480 format |
|---|---|---|
| 0001 | 280 x 80 | 22.50 (W447) |

## DIN thread slide

**Execution:** Made of aluminium, anodised, deep-black print, sealed against scratches, with tables on front and back side for metric ISO thread (DIN 13), Withworth thread (DIN 11), Withworth pipe thread (DIN 259).

**Application:** For the direct reading of all fundamental theoretical thread dimensions as well as wedge width, wedge height and shaft and hub keyway depth for 10–500 mm shaft Ø.

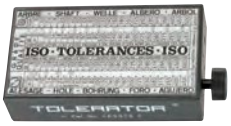
| Order No. | Dimensions mm | 4481 format |
|---|---|---|
| 0001 | 260 x 50 | 17.95 (W447) |

## Display device

**4482 0001** ISO tolerance key **Tolerator.** For reading all tolerance values.

**4482 0002** ISO thread indicator **Filetor.** For reading all determinations of a thread.

**4482 0003** Measurement convertor **Convertor.** For converting mm to inches and vice versa.



Tolerator

Filetor

Convertor

| Order No. | Design | 4482 format | Dimensions mm |
|---|---|---|---|
| 0001 | Tolerator | 82.30 | 60 x 30 x 110 |
| 0002 | Filetor | 82.30 | 60 x 30 x 110 |
| 0003 | Convertor | 82.30 (W447) | 60 x 30 x 110 |

## Feeler gauge

**Application:** For inspecting intermediate spaces, contact distances, etc.

**4483** **Sensor gauge.** Blades made of hardened spring steel, individually labelled with the size, conically tapering in high-gloss nickel-plated shell, with locking nut.

**4485** **Sensor gauge, antimagnetic** Blades made of brass, individually labelled with the size, conically tapering, with locking nut.

**4487** **Piston clearance gauge.** Blades made of spring steel, individually labelled with the size, conically tapering, with locking nut.

## Eyeglass magnifier maxDetail

ESCHENBACH

**Design:** Magnifying glasses with dioptre compensation +/3 dpt, can be adjusted independently of one another. Working distance 40 cm. Large PD area of 60–68 mm. PXM® plastic light-weigth lens, breakproof. Individual alignment of the individual lens. Supplied with hard foam case.

**Application:** Ideal for restorations, welding, testing/checking and cosmetics.

| Order No. | Magnification | 4522 ESCHENBACH | Weight g |
|---|---|---|---|
| 2000 | 2 x | 86.00 (W451) | 49 |

## Flip-up magnifier maxDetail clip

ESCHENBACH

**Design:** Especially created for glasses wearers with the advantages of glasses clip-ons in maxDetail construction with high-folding lens. PXM® plastic light lens breakproof. Optics can be height-adjusted, for each type of glasses, with 5 height adjustments. Large PD range from 62–70 mm. Field of vision 85 mm. Working distance from eye/lens ca. 400 mm. Supplied in hard foam case.

**Application:** Ideal for restorations, welding, testing/checking and cosmetics.

**Note:** Supplied without glasses.

## Workshop measurement microscope

NEW

Mahr

**Design:** Measurement microscope with control and display unit M3 software and touchscreen computer. Integrated colour camera, zoom lens, optional motor-power, LED ring light: 1 ring and 4 segments, each can be switched and dimmed, LED transmitted light: dimmable. Solid base made of hard granite, stable steel cross table, precision bearings, quick and fine adjustment of shafts. Accuracy and reliability through optical incremental measuring system, laser pointer for position finding. 23" touchscreen with keyboard and mouse. Windows 8 Pro serves as the basis, which therefore enable the installation of other software, operation via Multi-Touch on the monitor or with the mouse/keyboard. Supplied with measurement microscope with software and touchscreen PC incl. stop and calibration sheet.

**Functions:** Target/actual evaluation with tolerance indication, protocol printout with company logo, graphic representation with dimensions, automatic edge recognition also for low-contrast objects, stitching and statistic functions.

**Application:** Measurement or determination of geometric elements (point, straight, circular, pitch, intersection, etc.) via automatic edge recognition e.g. for stamping and forming parts, plastic parts as well as electronic circuit boards.

## Universal angle protractor with magnifier, stainless

Factory standard | INOX

**Design:** Made of stainless steel, matt chrome-plated, rail hardened. Rail with 45° and 60° angles. Vernier reading 5 angular minutes. Vernier and scale disc lie in one plane and thereby ensure a flawless, parallax-free reading. With fine adjustment by means of knurled screw and panorama magnifying glass with views over the entire vernier. Supplied in a wooden box.

| Order No. | Rail mm | 4653 format | Graduation |
|---|---|---|---|
| 1150 | 150 | 162.00 | 4 x 90° |
| 1200 | 200 | 172.00 | 4 x 90° |
| 1300 | 300 | 182.50 (W461) | 4 x 90° |

## Replacement rail

**Design:** Replacement rail with 45° and 60° angles, for universal protractor.

| Order No. | Rail mm | 4653 format |

# Digimar 817 CLM Quick Height

**The altimeter Digimar 817 CLM with the innovative Quick Mode. Quick measurement with highest accuracy. Extensive measurement and evaluation options with highest operating comfort.**

### Ideal for measuring with air bearing for large workpieces

With the keys incorporated in the base, the user can comfortably move the measuring slide into the desired position and start the measurement. This particularly facilitates the measuring of large workpieces that cannot be moved and positioned. The user can leave both hands on the measuring device (key air bearing and quick keys) and measure the workpiece entirely.

### Universal measuring options

- Extensive measurement functions in 1D and 2D
- Dynamic measurement functions with analogue display
- Automatic rectangularity and straightness measurement (with accessories)
- Automated measurement processes (measurement programmes)
- Auto-function for chain dimensions and distance measurement

### Highest accuracy and reliability

- Highly accurate, incremental measurement system with double reader head system, insensitive to contamination by dirt
- Robust column made of rustproof steel
- Measuring trolley guided in precision ball bearings
- Temperature compensation via internal temperature sensor

**Quick Mode:** Move measuring slide with hand toward the measurement object.

The motor starts the measurement process automatically.

## Altimeter Digimar 817 CLM Quick Height

NEW

Factory standard | RS232 | USB | Digimatic

Mahr

**Design:** Exceptional measurement accuracy and reliability with the optically incremental measuring system with double reader head, dynamic probe system for high repeatability, air bearing system for easy, jerk-free movement, precise measuring head guidance on stainless steel guide rails, easy measurement processes with motor-driven measuring slide, scanner constant is retained after deactivation, integrated, rechargeable batteries with long operation duration for network-independent measuring, temperature compensation via int. temperature sensor, large and clear function keys, clearly readable LCD display with background lighting, user guidance by means of intuitive icons, user guidance in several languages, possibility to set additional zero points on the workpiece, additional measuring device can be connected with Opto RS 232 interface, future-proof through upgradability, automatic standby switch, adjustable auto-off function without losing measurement values. With data output via radio transmission, RS 232, USB and Digimatic. Supplied with operating and display element, carrier, measuring insert, setting block, charger, USB cable, protective hood and calibration note.

**Functions:** Detection from above and below, ridge width and groove distance incl ridge and groove centre, borehole and shaft diameter incl. borehole and shaft centre, reversal point boreholes (top and bottom), reversal point shaft (top and bottom), calculation of distances and symmetry, dynamic measurement functions, squareness measurement, straightness measurement, measurement in 2D mode, measurement programmes, statistical evaluation, measurement data processing.

**Note:** Radio receive incl. software (Order No. 4942 0030) 4/129).

## Height gauge and marking instrument Digimar 814 N

NEW

RS232

Mahr

**Design:** Large and easily readable digital display, measurement and display device on measuring head, with digital size preset, zeroing of display in each measurement position, entry of tolerance limits for 1 feature, incremental inductive measurement system, ball bearing guidance of measuring head, wear-resistance measuring system, easy to use with hand crank on side of measuring head, constant measuring force, acts selectively upward or downward, can be clamped in all positions for marking tasks, with precision adjustment, network independent via battery operation, universal use thanks to elaborate accessories. With data output via radio transmission, RS 232, USB and Digimatic. Supplied with operating and display element, carrier, probe arm, ball measuring probe, 8 mm, battery, protective hood and calibration note.

**Functions:** Switch-on and automatic off, mm/inch-switching, reset (zeroing) possible in any position, ± preset function (measurement value pre-adjustment), counting direction inversion, tolerance entry, max.-min. for concentricity and planarity testing.

**Application:** For measuring heights and distances between boreholes, surfaces and edges, for marking workpieces.

**Note:** Radio receive incl. software (Order No. 4942 0030) 4/129).

**Small measuring tables**

can be found from 4/66.

Mahr

# MarSurf

**Handy and precise for roughness measurements on site**

**Integrated calibration standard**
No external calibration standard required. Provides more security for standard-compliant measurements. To examine the standard probe, you need a test standard that is integrated in MarSurf M300 – this ensures that your results are correct!

**Sensor with removable sensor protection**
They measure standard-compliant, 0.002 mm diamond tip, measurement force 0.7 mN. Probe with open skid for various measurement tasks are available.

**Automatic cutoff selection ...**
...ensures the proper measurement results for the non-measurement technician. Profile filter separate a profile into long-wave and shortwave parts. The profile filters defines the transition from roughness to waviness. R-profile (roughness profile) is the deviation of the primary profile from the centre line of the profile filter. When depicting the roughness profile, the centre line is the zero line.

**Integrated memory**
Large memory to save results and profiles.
The MarSurf M 300 Explorer essentially serves to store and document your measurement results and profiles.

## Mobile roughness gauge

NEW

IP 40 | RS232 | USB

Mahr

**Design:** Handy roughness gauge for mobile use, easy and intuitive to operate, large, illuminated 4.3" TFT touch display, display can be rotated, data backup as TXT, X3P, CSV and PDF file, network independent operation: More than 1,200 measurements without having to recharge the device, everything in one product. Small size and low weight (approx. 500 g).
Flexibility of the device: removable drive unit, in all measurement positions: horizontal, vertical, overhead, die 31 indicators offers performance such as a lab device, integrated and removable roughness standard, quick access to your favourite functions with the favourite area in the display, short boot times, the result is available within a matter of a few seconds. The automatic cutoff selection ensures the proper measurement results for the non-measurement technician. Supplied with drive unit (removable), 1 standard probe, standard-compliant, integrated battery, roughness standard, integrated in enclosure (removable) incl. Mahr calibration note, probe protection, chargr/3 network adapter, operating instructions, carry bag with shoulder straps, USB calbe, extension cable with drive unit and height adjustment (inegrated).

**Application:** For shafts, enclosure parts, large machines, large workpieces, milling and turning parts, ground and honed workpieces, in production and manufacturing areas at the machine for the quick determination of the roughness depth of the workpiece in or on the machine.

**Note:** Probes, measurement stands and geometry standards from 📖 4/120.

## Precision crown stopwatch

**Design:** With a black ABS plastic housing and bracket, jerk-, impact-, dust- and water protected pin lever movement, 1 stone made of synthetic ruby. Start, stop, reset is performed via crown.

**Application:** For timing without interruption.

| Order No. | Graduation | 4862 hanhart 1882 | Display time min | Housing Ø mm | Weight g |
|---|---|---|---|---|---|
| 0015 | 1/10 s. | 108.00 | 15 | 55 | 80 |
| 0030 | 1/100 min. | 108.00 (W487) | 30 | 55 | 80 |

## Precision adding stopwatch

**Design:** Diamond cut and chrome-plated brass enclosure, with impact-, dust- and water-protected pin lever, 7 stones made of synthetic ruby, high accuracy.

**Application:** For timing with interruption possibilities, with drag pointer for interim measurement.

| Order No. | Graduation | 4865 hanhart 1882 | Display time min | Housing Ø mm | Weight g |
|---|---|---|---|---|---|
| 0030 | 1/100 min. | 287.00 (W487) | 30 | 55 | 130 |

## Digital stopwatch Accord 1

**Design:** With black ABS plastic housing, spray proof, ultrasound welded viewing window, 1-button operation, top LC display 7-digit, lower LC display 2-digit, 2-digit memory display, decimal division 1/100 minutes. Supplied with Mignon battery AA/LR06, 1.5 V, protective bag and cord.

**Functions:** Start/Stop/Reset – Split/Lap, both times can be switched at any time. Separate system and memory reset, time and date.

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).

| Order No. | Display time min | 4867 hanhart 1882 | Memory split/LAP | Weight g |
|---|---|---|---|---|
| 0060 | 99999.99 | 123.00 (W487) | 60 | 90 |

## Digital stopwatch Spectron

**Design:** With grey ABS plastic housing, waterproof, 2 button operation, with 2 1/2 line LCD displays, top 6-digit, lower 7-digit. Decimal classification 1/100 minute. Supplied with micro battery AAA/LR03, 1.5 V, protective bag and cord.

**Functions:** Start/Stop and Split are operated by 2 separate buttons. Start/Stop/Reset – Addition/Split/Lap/Short Lap. Alternation between split, lap and time possible during measurement, selectable 1/100 minute – 1/100 second, 2 countdowns and 65 memories for split and lap.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Display time min | 4869 hanhart 1882 | Dimensions mm | Memory split/LAP | Weight g |
|---|---|---|---|---|---|
| 0065 | 99999.99 | 134.50 (W487) | 82 x 61 x 28 | 65 | 85 |

## Spring scales light

NEW

**Design:** High accuracy, tare and zero position setting with precise grid adjustment, tare area up to 15–20 % of capacity, bright coloured marking for exact reading, inner pipe freely elastic, highest precision as there is no friction, long precision scale with high resolution, corrosion-free and non-fatigue precision fields, sealed, transparent outer pipe with double scale and 360° reading, moisture and dirt-resistant. Ideal for industrial and external applications, light-weight construction, weighs only 20 g.

| Order No. | Load-bearing capacity g | 4894 | Graduation g | Suspension |

## Wall thickness gauge Echometer basic device

IP 54

KARL DEUTSCH

**Design:** Solid basic device for the measurement of wall thickness and speed of sound with the latest meaduring technology and modern design. The device is suitable both for quick quality inspections in Production as well as for measuring the corroded interiors of tanks or pipelines. The wall thickness measurement range comprises – depending on the test head – 0.5 to 400 mm. During the sound velocity measurement, all sound-conductive materials can be measured with a measurement range of 100 to over 19999 m/s. With large, backlit graphics display in 3 selectable display modes: standard display, differential value and minimum value, limit value monitoring with acoustic and visual control, splashproof housing with impact-absorbing protective rubber frame and support bracket. Automatic probe detection. Supplied with operating instructions, 100 ml coupling means ECHOTRACE and 2 batteries LR44, 1.5 V, in carrying case.

**Note:** Optional measurement value storage and data interface as well as software packages ( "EasyExport" and "iCom" ) available upon request.

| Order No. | Dimensions mm | 4935 KARL DEUTSCH |
|---|---|---|
| 0011 | 131 x 81 x 32 | 950.00 ◊ (W494) |

## Regular accessory kit for Echometer basic device

**Design:** Supplied with probe DSE 10.4/6PB 4 (1.2 mm to 250 mm), grip sleeve and 10 protection foils.

| Order No. | 4935 KARL DEUTSCH |
|---|---|
| 0013 | 400.00 ◊ (W494) |

## Layer thickness gauge Leptoskop®

KARL DEUTSCH

**Design:** Portable layer thickness gauge in pocket-size format, illuminated display with large measurement value display, can also be read overhead. With integrated, spring-loaded probe, calibrated at works, over 10 languages selectable, measurement system can be switched to µm, mm, mils and inches. Device made of black ABS plastic. Dimensions 46 x 95 x 16 mm, weight 70 g. Supplied with micro battery AAA/LR03, 1.5 V, in plastic case.

Measurement range:
NFe measurement: 0 to 1200 µm
Fe measurement: 0 to 3000 µm

Measuring uncertainty (after calibration):

| | | | |
|---|---|---|---|
| • For layers | > 100 µm: | 1 % | ± 1.5 µm |
| • For layers | 100–1200 µm: | 1–3 % | ± 1 µm |
| • For layers | > 1200 µm: | 3–5 % | ± 1 µm |

**Application:** For precise measurement of the layer thickness of paints, lacquers, plastics, rubber, chrome, copper, zinc, anodised layers etc. on metal

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).
Optional software packages ("Statistics and data memory", "iCom", "EasyExport") available on request.

**4935 0100** For the thickness measurement of layers which cannot conduct electricity on non-magnetic, electrically conductive base metals (NFe, e.g. aluminium, copper, brass, bronze, austenite etc.) according to the eddy-current procedure (DIN EN ISO 2360).

**4935 0150** For thickness measurements of non-magnetic layers on magnetic base metals (FE, e.g. iron, cast iron, steel, nickel, cobalt etc.) according to the magnetic inductive principle (DIN EN ISO 2178).

**4935 0200** Combination probe for NFe and Fe measurements. The type of base metal is automatically detected.

| Order No. | Design | 4935 KARL DEUTSCH |
|---|---|---|
| 0100 | NFe | 603.00 ◊ |
| 0150 | Fe | 612.00 ◊ |
| 0200 | Fe/NFe | 803.00 ◊ (W494) |

## Layer thickness measuring instrument Leptoskop®

RS232 USB

KARL DEUTSCH

**Design:** Versatile layer thickness measuring instrument with external probe, precise measuring technology and the possibility of fast on-site extension via enabling codes (software modules "Statistics" and "Data storage" ). Large, backlit graphics display (48 x 24 mm), large selection of probes. Measurement range 0–20000 µm (dependent on probes), 10 selectable languages, USB-/RS232 interface and rubber protective frame. Battery lifetime approx. 100 hours. Supplied with Fe probe to 5000 µm, control body, set of calibration foils, operating instructions, acceptance protocol/quality test certificate, measurement protocol, specialist literature and 2 Mignon batteries AA/LR06, 1.5 V, in plastic case.

Measuring uncertainty (after calibration):
Layer thickness < 100 µm: 1 % of the measurement value ± 1 µm
Layer thickness > 100 µm: 1–3 % of the measurement value ± 1 µm
Layer thickness > 1000 µm: 3–5 % of the measurement value ± 10 µm
Layer thickness > 10000 µm: 5 % of the measurement value ± 100 µm

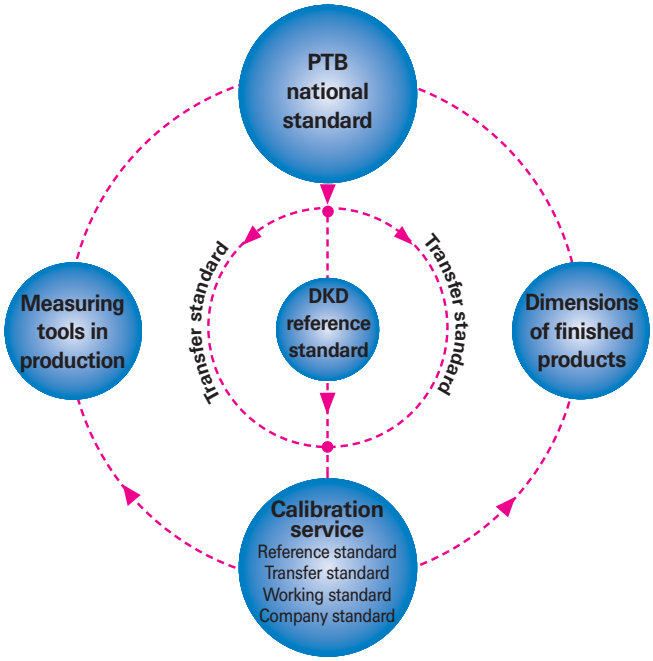
**Application:** Determines the thickness of non-magnetic layers on magnetisable substrate (Fe, acc. to DIN EN ISO 2178) and the thickness of non-conductive layers on conductive base materials acc. to the eddy-current principle (NFe, acc. DIN EN ISO 2360).

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).
Further probes and comprehensive accessories, such as measurement value storage with easy data management such as under Windows, limit value input and monitoring, statistical evaluations with up to 999 measurement values, different PC assessment programs, many calibration options as well as software extension for data storage (e.g. PC software, data cable printer) are available on request.

| Order No. | 4935 KARL DEUTSCH |
|---|---|
| 0250 | 1235.00 ◊ (W494) |

## Test equipment monitoring service/calibration

**Calibration service? – Why?**
More and more, the quality of the products produced is the determining factor in securing a company's future. Stringent customer requirements and international law on the liability of producers, extensive warranties and regulations require the complete identification of measurement and test equipment that can affect product quality. The calibration of measuring tools and test equipment monitoring is of particular importance in DIN EN ISO 9000 standards. Each certified company shall ensure and demonstrate that test equipment is regularly reviewed for applicability and accuracy. The company must prove that the measuring instruments used for **quality-related measurements** and tests are linked to national standards. Traceability must be ensured and documented by means of examination in committed time intervals according to national standards. Much of the measuring and test equipment offered in this sales support is already delivered with a free and **traceable national standards TEST CERTIFICATE**. As an additional service, we offer the calibration of newly ordered measuring tools, as well as re-calibration. The calibration is performed independently of the manufacturer. Naturally, we work exclusively with recognised calibration laboratories associated with the **German Calibration Service (DKD).** The standards **(DKD - standards)** of this calibration office are compared in stipulated time intervals with the national PTB (Physikalisch-Technische Bundesanstalt) standards. The calibration is performed in accordance with predetermined DIN standards, of VDI/VDE/DGQ 2618 et seq. guidelines, or by company standards. **For more information, please get in touch with our expert advisors. When required, the employees of our contractors are also available.**



## Tensile and pressure force gauge

**Design:** Digital force gauge with reversible display, automatic detection of direction. Peak hold function for detecting the peak value or track function for continuous measurement display. Auto power off. Supplied with standard 6-piece attachments and 6 Mignon batteries AA/LR06, 1.5 V, in transport packaging.

**Note:** Replacement battery: (Order No. 9041 0018 📖 9/12).
With one of two optional attachments for tensile test the device becomes a tensiometer for testing material voltage characteristics of cables, wires, threads, cords.

| Order No. | Measurement range N | 4940 SAUTER | Reading N | Measurement units | Thread |

## Hardness tester Shore-Duometer

**Design:** With drag indicator, max. mode captures the peak value, point mode shows the stable measured value. Supplied in wooden box.

**Application:** Measuring the Shore penetration depth: plastics, resin, Formica, epoxy, acrylic etc. Recommended especially for internal comparison measurements, where standard calibration, e.g. according to DIN 53505 is not possible.

| Order No. | Measurement range | 4941 SAUTER | Reading | Hardness |
|---|---|---|---|---|
| 0100 | 100 HD | 145.00 (W498) | 1.0 HD | Shore D |

## Lever test stand for Shore-Duometer

**Design:** For reproducible hardness testing with base plate of glass. High measurement accuracy due to increased hardness of the base plate.
Mechanical design allows precise measurement movements. Levelling device for precise levelling of the base plate. Levelling test bench for inhomogeneous test objects.

**Application:** Suitable for Shore hardness testing of plastics, leather, etc. The SAUTER HB hardness tester is mounted in a hanging position. The test object is placed on the round testing table right under the probe tip. By depressing the lever, the probe tip is pressed in a defined manner into the test object.

**Note:** The accuracy of the measurement result with this test is about 25% higher than for a hand measurement. Supplied without Shore-Duometer.

| Order No. | Length of stroke mm | 4941 SAUTER | Measuring face Ø mm |
|---|---|---|---|
| 0110 | 15 | 310.50 (W498) | 75 |

## Leeb hardness test device HMM

**Design:** Rebound module is jerked by a spring against the test object. The speed reduction is measured and converted into Leeb hardness values. Tests at any angle (360°) due to automatic compensation. Mini statistics function displays the measured value, average value, the difference between maximum and minimum value, date and time. Measuring value display: Rockwell (B & C), Vickers (HV), Brinell (HB), Shore (HSD), Leeb (HL), tensile strength (MPa). Automatic unit conversion, so that measurement result is automatically re-evaluated in all the cited hardness units.

**Functions:**
Accuracy: 1 % at 800 HLD (± 6 HLD)
Thinnest measurable layer: 8 mm
minimum radius of curvature of the test object (concave/convex : 50 mm

**Scope of delivery:** Impact device (type D), infrared printer, hardness reference block, AC adapter and 3 micro batteries AAA/LR03, in plastic case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Measurement range yield strength | 4941 SAUTER | Readability (d) HL | Internal data memory |

## EC accuracy classes

The EC accuracy classes define the maximum variations in measurements. They are divided into 3 classes, considering material and temperature.

Tolerances:

**Folding rulers:**
Class I: ± 0.2 mm to 1 m; ± 0.3 mm to 2 m
Class II: ± 0.5 mm to 1 m; ± 0.7 mm to 2 m; ± 0.3 mm above the joint
Class III: ± 1.0 mm to 1 m; ± 1.4 mm to 2 m; ± 0.5 mm above the joint

**Tape measures:**
The tolerances of 20 °C and a tensile fore of 20 Newtons (N) for plastic and 50 Newtons (N) for stainless steel tapes
Class I: ± 1.1 mm to 10 m
Class II: ± 2.3 mm to 10 m
Class III: ± 4.6 mm to 10 m

## Wooden folding ruler

**Design:** Made of beechwood, brass-plated steel spring, riveted arm connection, 3.0 mm thick arms, colour white, black mm graduation on the upper and lower arm edges.

EG III

| Order No. | Length m | 4671 | Width mm | Joint thickness mm | Joint number |

## Laser distance meter DistanceMaster Compact Pro

NEW

**Design: With Bluetooth interface** and angle measurement, measurement range inside 0.1 to 50 m, high measuring accuracy ± 2 mm (typical), the surface and volume function enables the entry of room sizes, e.g. for the calculation of material quantities, 360° inclination sensor for the determination of horizontal and vertical distance, Pythagoras 1 + 2 + 3, min./max. continuous measurement, with storage options, illuminated 3-line colour LC display, stable,ergonomic housing. Supplied with 2 micro batteries AAA/LR03, 1.5 V, in carrying case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).
For use with the free Laserliner app MeasureNote (Android and Apple).

| Order No. | Range m | 4745 Laserliner | Accuracy mm | Measurement units | Dimensions mm |
|---|---|---|---|---|---|
| 0300 | 0.1–50 | 90.40 (W465) | ± 2.0 | m, ft, inch | 110 x 43 x 27 |

## Laser distance meter DistanceMaster Pocket Pro

**Design:** Compact laser distance measuring meter for accurate measuring using laser light, measuring range inside 0.05–70 m, LCD display, with 3 switchable measuring planes (front, rear and pin). With min/max. function for the determination of diagonal, horizontal and vertical distances. Simple determination of room circumference using the addition and subtraction function, area and volume function, height measurement with double Pythagoras function, memory function for 50 measurement values. Supplied with 2 micro batteries AAA/LR03, 1.5 V, in carrying case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Range m | 4745 Laserliner | Accuracy mm | Measurement units | Dimensions mm |
|---|---|---|---|---|---|
| 0500 | 0.05–70 | 92.80 (W465) | ± 2.0 | m, ft, inch | 112 x 48 x24 |

## Laser distance meter DistanceMaster

**Design:** Compact laser distance measuring meter for accurate measuring using laser light, LCD display, with 4 switchable measuring planes (front, rear, stand and pin). Measuring range inside 0.05–100 m. With min/max. function for the determination of diagonal, horizontal and vertical distances. Simple determination of room circumference using the addition and subtraction function. Area and volume function, height measurement with double Pythagoras function, reference mode for the simple transfer of lengths, with 1/4" stand connection. Supplied with probe tip and 2 micro batteries AAA/LR03, 1.5 V, in transport case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Range m | 4745 Laserliner | Accuracy mm | Measurement units | Dimensions mm |

| Order No. | Height m | 4745 Laserliner |
|---|---|---|
| 1000 | 1.5 | 51.90 (W465) |

## Laser distance meter Leica DISTO™

**Design:** Handy laser distance measuring meter with min/max measurement, continuous measurement, area and volume measurement. Also equipped with display illumination, history memory and multifunctional end piece.

**Application:** Distance, area and volume calculations, continuous measurements as well as minimum and maximum measurements.

**4718 0110** **D110** Handy mode; with **Bluetooth**® Smart Technology. Protected against dust and splashproof, ergonomic and compact design with Softgrip. Supplied with 2 micro batteries AAA/LR03, 1.5 V, in carrying case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

**4718 0201** NEW **D2** Model with large range, protected against dust and splashproof, with 360° incline metre, **Bluetooth**® Smart technology, measuring elements protected through solid rubber components. In addition, it was tested for falls from up to 2 meters high. Supplied with hand loop and 2 micro batteries AAA/LR03, 1.5 V, in transport case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

**4718 0310** **X310** Model with large range, protected against dust and splashproof, with 360° incline meter, measuring elements protected through solid rubber components. In addition, it was tested for falls from up to 2 meters high. Supplied with hand loop and 2 micro batteries AAA/LR03, 1.5 V, in transport case.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

**4718 0510** **D510** Universal-use model with sharp **colour display and 4x zoom,** protected against dust and splashproof, with self-timer. Automatically calculates room dimensions, such as room circumference, wall and ceiling areas, measures **inclines up to ± 360°** and horizontal distances over obstacles. Can be aimed at far distant targets even in a very brightly lit environment, and can be used to measured roof pitches and facade areas. Using the integrated **Bluetooth**® Smart Technology, measurement data can be easily and correctly transmitted. Supplied with hand loop, operating instructions and 2 Mignon batteries AA/LR06, 1.5 V, in transport case.

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).

**4718 0810** **D810 touch** Universal model with **touch screen,** dust- and splashproof, with self-timer, **Bluetooth**® Smart and **USB.** Determination of distances in a photo. By means of the integrated camera, photos can be stored via UBS to a computer. Automatically calculates room dimensions, such as room, wall and ceiling areas, measures **inclines up to ± 360°** and horizontal distances over obstacles. Can be aimed at far distant targets even in a very brightly lit environment, and can be used to determine peaks and terrain profiles and to measure roof pitches and facade areas as well as heights without a reflection point. High functionality is optimally complemented by the **app** Leica DISTO™ sketch. Supplied with hand loop, manufacturer's certificate, operating instructions, Quickstart, software and 2 Mignon batteries AA/LR06, 1.5 V, in transport case.

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).

**4718 0910** NEW **S910** Universal model with **touch screen,** dust- and splashproof, with self-timer, Bluetooth ® Smart and USB and **realtime data transfer with WLAN.** Target finder for 4x zoom for perfect targeting, X-Range Power Technology for highest measurement performance. Measures **inclines up to ± 360°** and horizontal distances over obstacles. Can be aimed at far distant targets even in a very brightly lit environment, and can be used to determine peaks and terrain profiles and to measure roof pitches and facade areas as well as heights without a reflection point. High functionality is optimally complemented by the **app** Leica DISTO™ sketch. Supplied with hand loop, Smart Base extensions, operating instructions, belt pouch and USB charging device, incl. 4 plugs.

## Cross-line laser AutoCross laser 2 Plus

NEW

IP 54

Laserliner Innovation in Tools

**Design:** Cross-line laser with two high-visibility laser lines, individually switchable . Automatic alignment by means of magnetic damped pendulum system. Optical signals indicate when the device is located outside the levelling range. A pendulum catch protects the device during transport. Line laser class 2M, < 5 mW. Accuracy: 2 mm to 10 m. Self-levelling range: ± 3°, Laser reception range: max. 40 m radius (with optional hand receiver). Supplied with 2 magnetic wall brackets, Accu-rapid battery charger and 3 NiMH Mignon batteries AA/LR06, in plastic case.

**Note:** Replacement battery: (Order No. 9042 0017, 📖 9/12).

| Order No. | Range m | 4717 Laserliner Innovation in Tools | Laser lines | Laser wavelengths nm | Dimensions mm | Weight kg |
|---|---|---|---|---|---|---|
| 0000 | 40 | 146.00 (W465) | 2 | 635 (red) | 115 x 95 x 65 | 0.5 |

## Cross-line laser PowerLine Laser 3D Pro

NEW

IP 54

Laserliner Innovation in Tools

**Design:** With 3 extremely bright 360° laser lines, simple plumb bob function with laser crosses. Optimised for working close to the ceiling, 2.5° self-levelling range, accuracy 2 mm/10 m, additional inclination function to align slopes, with the magnetic wall mount, the device can be used individually or in combination, on walls and magnetic objects. Out-Of-Level: Optical signals indicate when the device is located outside the levelling range. Supplied with magnetic wall bracket, attachable extension board, batteries, quick charger, in plastic case (SORTIMIO L-Boxx 136).

**Application:** Ideal for almost all alignment work in interior and exterior applications.

**Note:** Supplied without laser receiver.

| Order No. | Range m | 4717 Laserliner Innovation in Tools | Laser lines | Laser wavelengths nm | Dimensions mm | Weight kg |
|---|---|---|---|---|---|---|
| 0004 | 40 | 652.00 (W465) | 3 | 635 (red) | 85 x 130 x 155 | 1.18 |

## Cross-line laser AutoLine laser 3D set

NEW

| Order No. | Set contents | 4717 Laserliner Innovation in Tools | Weight kg |
|---|---|---|---|
| 0011 | 1 cross-line laser AutoCross-Laser 3D<br>1 compact stand 300 cm<br>2 transport bags | 623.00 (W465) | 6.75 |

## Laser receiver RangeXtender 40

Laserliner Innovation in Tools

**Design:** With the RX-Ready, the laser lines pulse with a high frequency, meaning that the laser receiver detects the laser lines. Mounting with head and side magnet. The device can be fastened to the yardstick by means of the universal mount. Supplied with universal mount and 2 micro batteries AAA/LR03.

**Application:** For localising laser lines even in adverse lighting conditions.

**Note:** Not suitable for green laser. Replacement battery (Order No. 9041 0018, 📖 9/12).

| Order No. | Reception area m | 4717 Laserliner Innovation in Tools |
|---|---|---|
| 1015 | 40 | 115.50 (W465) |

## Rotation laser Cubus 110 S

NEW

IP 66

Laserliner Innovation in Tools

**Design:** Robust, watertight housing with electronic actuators for fully automatic alignment and vertical reference beam. LD dsiplay on front side. Self-levelling within a range of ± 4°, accuracy ± 1.5 mm to 10 m. Red laser beams, laser class 3R < 5 mW, the hand receiver recognises the lines up to a radius of 400 m: Point, scan, rotation and hand receiver mode. Automatic shutdow in the case of external interference.

**Application:** Ideal for use in interior fittings and interior and outside structural engineering applications.

**Supplied with:** laser receiver, remote control, universal mount, integrated battery, power supply/charger, in plastic case.

| Order No. | Range m | 4719 Laserliner | Laser lines | Laser wavelengths nm | Dimensions mm | Weight kg |
|---|---|---|---|---|---|---|
| 0016 | 100 | 519.00 (W465) | 2 | 635 (red) | 160 x 130 x 145 | 1.3 |

## Rotation laser Quadrum One Touch 410 S

IP 66

Laserliner Innovation in Tools

**Design:** Rotation laser with one button operation, for horizontal levelling at very large distances. Robust, watertight housing. WIth electronic actuators for automatic horizontal alignment, which temperature stable sensor technology. Self-levelling in a range of ± 5, accuracy ± 0.75 mm/10m. Red laser beams, laser class 3R, < 5 mW, the laser receiver detects the lines up to a radius of 400 m. Automatic switch-off on interference. The manual tilt mode permits the creation of gradients up to 5°. The hand laser has an LCD display on the front and rear side, super-bright, three-colour signal LEDs and acoustic melodies which indicate the height of the laser beam, with strong head and lateral magnets. A special motor brake protects the device during transport.

**Supplied:** with laser receiver, remote control, universal mount, high-performance rechargeable battery, power supply/charger and 4 baby batteries C/LR14, 1.5 V, in plastic case.

**Note:** Replacement battery: (Order No. 9041 0012, 📖 9/12).

| Order No. | Range m | 4719 Laserliner | Laser lines | Laser wavelengths nm | Dimensions mm | Weight kg |
|---|---|---|---|---|---|---|
| 0050 | 400 | 745.50 (W465) | 8 | 635 (red) | 215 x 205 x 165 | 2.6 |

## Accessories for rotation laser

**4722 0006** NEW — **Telescope levelling staff**, easily readable, highly stable made of aluminium profile.

**4722 0010** — **Yardstick** for all measurements from floor height, with box level. Height differences can be read off directly without calculations being necessary.

4722 0006 4722 0010

| Order No. | Design | 4722 Laserliner | Reference height m |
|---|---|---|---|
| 0006 | Telescopic levelling staff, 5 m | 48.40 | 0.8–1.9 |
| 0010 | Yardstick for red laser, 2.4 m | 57.80 (W465) | 0.8–1.9 |

## Stands for cross-line and rotation lasers

**4722 0050** NEW — **Lightweight design** made of aluminium with chamfered support surface, 5/8" thread adaptor, robust steel feet. Supplied with hook for plumb bob and carrying belt.

**4722 0035** — **Compact design** made of aluminium with **box level,** 5/8" thread adaptor, **multiple extension stand legs** and crank mechanism for large adjustment range. Problem-free adaptation to different surfaces due to a rubber-steel tip combination.

**4722 0055** NEW — **Robust design** with **integrated backlash-free** and **lockable professional crank mechanism (70 cm),** steel chains and feet. Supplied with carrying belt.

**4722 0045** — **Telescopic stand** made of aluminium, 5/8" thread adapter, can dismantled into 4 parts for easy transport. For clamping between the floor and ceiling, ideal for rapid changes in working height. Supplied with transport bag.

| Order No. | Height m | 4722 Laserliner |

## Light metal spirit level

**Design:** Made of strong-walled aluminium, with barrel-shaped horizontal and vertical bubbles. Measuring accuracy in normal position 0.5 mm/m.

**Application:** Suitable for horizontal normal and overhead measurement as well as for vertical normal measurement. **Order No. 4728 also suitable for horizontal and vertical rough measurements.**

**4727** silver coloured anodised. The bubble tubes have laser graduations, which can also be easily read in poor light conditions due to the magnifying effect, 2% gradient can be read at a glance, 5-year guarantee on the bubbles.

**4728** Powder-coated red. The unbreakable, barrel-shaped Plexiglas bubbles are electronically adjusted and ultrasonically welded with the holders. 5-year guarantee on the bubbles. With shock-adsorbing, unbreakable end caps. **With milled measuring face up to 100 cm length.**

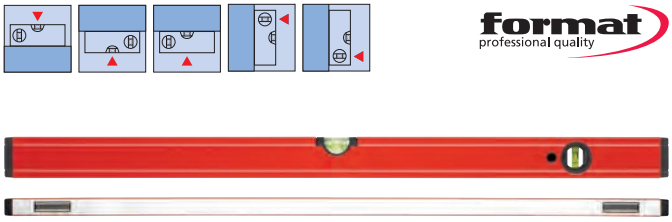
| 0200 | 200* | 80.50 (W449) | 50 x 25 |

* With 2 vertical bubble level indicators.

## Magnetic spirit level

**Design:** Made of thick-walled aluminium, red powder-coated and with strong adhesive force due to large-volume permanent magnets in the sole. The unbreakable, barrel-shaped Plexiglas bubble level indicators are electronically adjusted and ultrasonically welded with the holders. 5-year guarantee on the service life of the bubble level indicators. With shock-adsorbing, unbreakable end caps. **With milled measuring face up to 100 cm length.** Measuring accuracy in normal position 0.5 mm/m.

**Application:** Particularly suitable for installers, shop fitters and shelf constructors. Suitable for horizontal and vertical normal, overhead and reversal measurements.



| Order No. | Length cm | 4729 format | Cross-section mm |
|---|---|---|---|
| 0040 | 40 | 31.80 | 50 x 22 |
| 0060 | 60 | 33.90 | 50 x 22 |
| 0080 | 80 | 42.90 (W469) | 50 x 22 |

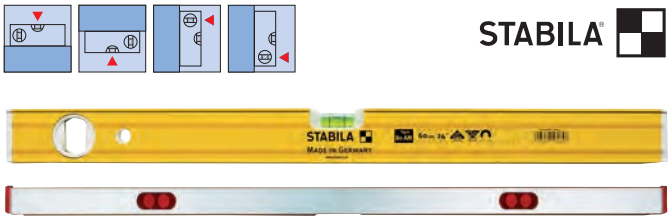
| 0180 | 180 | 79.90 (W469) | 50 x 22 |

## Magnetic spirit level 80 AM

**Design:** Ribbed light metal rectangular profile, with reinforced upper and lower sides. With extra strong rare earth magnets, 5 x stronger than normal ferrite magnets. With unbreakable bubble level indicator made of block acrylic glass. To ensure the accuracy, the bubble level indicators are firmly molded into the spirit level body. **With milled measuring face up to 120 cm length.** Measuring accuracy in normal position: 0.5 mm/m, measuring accuracy in reverse position: 0.75 mm/m.

**Application:** Especially suitable for aligning metal objects because of the very strong magnets. Suitable for horizontal and vertical measurements in normal and reverse position.



| Order No. | Length cm | 4767 STABILA | Cross-section mm |
|---|---|---|---|
| 0040 | 40 | 44.20 | 50 x 25 |
| 0060 | 60 | 48.30 | 50 x 25 |
| 0080 | 80 | 51.30 | 50 x 25 |
| 0100 | 100 | 56.80 (W449) | 50 x 25 |

| Order No. | Length cm | 4767 STABILA | Cross-section mm |
|---|---|---|---|
| 0120 | 120 | 59.80 | 50 x 25 |
| 0150 | 150 | 92.60 | 50 x 25 |
| 0180 | 180 | 100.50 | 50 x 25 |
| 0200 | 200 | 113.50 (W449) | 50 x 25 |

## Magnetic spirit level

**Design:** Made of silver-coloured anodised, thick-walled aluminium. With one circular horizontal and one vertical bubble, easily readable even in poor lighting conditions. With shock-adsorbing, unbreakable end caps and a high-strength magnet.
Measuring accuracy in normal position and for reverse 0.5 mm/m.

**Application:** Suitable for horizontal and vertical normal and reversal measurements particularly in confined spaces.

| Order No. | Length cm | 4734 format | Cross-section mm |
|---|---|---|---|
| 0020 | 20 | 29.70 (W462) | 50 x 22 |

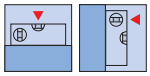
## Universal spirit level

**Design:** Made of plastic, with strong adhesive force through 2 large-volume permanent magnets in the base. The horizontal bubble is permanently installed; the inclination angle bubble is rotating by 180°, one end of the spirit level body is inclined 45°, and the other 60°, with mm graduation. Unbreakable Plexiglas bubbles. 5-year guarantee on the bubbles.

**Application:** For measuring in horizontal normal and reverse measurement as well as for overhead measurements and measurements of inclination angles.

| Order No. | Length cm | 4731 format | Cross-section mm |
|---|---|---|---|
| 0025 | 25 | 25.00 (W462) | 54 x 15 |

## Electrician's spirit level

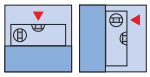


**Design:** Made of red, glass fibre-reinforced ABS plastic. With one round horizontal and one round vertical bubble level indicator an 2 disc magnets. Measuring accuracy in normal position 1.0 mm/

**Application:** Suitable for horizontal and vertical normal measurements.

| Order No. | Length cm | 4740 format | Cross-section mm |
|---|---|---|---|
| 0025 | 25 | 11.20 (W462) | 43 x 22 |

## Magnetic spirit level

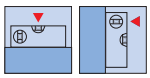


**Design:** Made of solidmetal, with 2 strong magnets. 3 acrylic bubbles (UV- and water-resistant). **With side view and mirror optic**, the bubble can be comfortably observed from the top view. Measuring accuracy in normal position 0.5 mm/m.

**Application:** Suitable for horizontal and vertical normal measurements.

| Order No. | Length cm | 4746 format | Cross-section mm |
|---|---|---|---|
| 0025 | 25 | 31.40 (W468) | 45 x 20 |

## Spirit level Torpedo

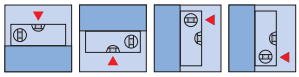


**Design:** Made of aluminium rectangular profile, powder-coated. With unbreakable bubble level indicator made of block acrylic glass. To ensure the accuracy, the bubble level indicators are firmly molded into the spirit level body. With impact resistant plastic end caps. Measuring accuracy in normal position 0.5 mm/m.

**Application:** Suitable for horizontal and vertical normal measurement.

| Order No. | Length cm | 4790 STABILA | Cross-section mm |
|---|---|---|---|
| 0025 | 25 | 12.10 (W449) | 50 x 20 |

## Spirit level Torpedo S



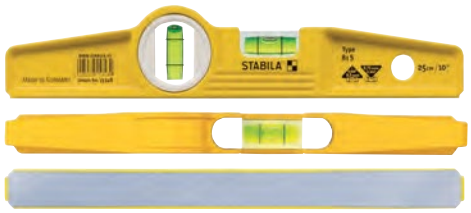
**Design:** Strong die cast aluminium profile with unbreakable bubble level indicators made of block acrylic glass. Trapezoidal shape makes for a sure grip. **With milled measuring surface.** Supplied with belt bag. Measuring accuracy in normal position: 0.5 mm/m, measuring accuracy in reverse position: 0.75 mm/m.

**Application:** Suitable for horizontal and vertical measurements in normal and reverse position.

**4768** Standard design.

**4769** With strong magnets.

**4777** With extra strong rare earth magnets, 5 x stronger than normal ferrite magnets.



| Order No. | Length cm | 4768 STABILA | 4769 STABILA | 4777 STABILA | Cross-section mm |
|---|---|---|---|---|---|

## Magnetic spirit level Torpedo SV REM

**Design:** Strong die cast aluminium profile with unbreakable bubble level indicators made of block acrylic glass. Trapezoidal shape makes for a sure grip. **Milled measuring surface with V groove** for placement e.g. on pipes. **6-ring horizontal bubble level indicator for 1 % and 2 % slope measurements.** With extra strong rare earth magnets, 5 x stronger than normal ferrite magnets. Supplied with belt bag. Measuring accuracy in normal position: 0.5 mm/m, measuring accuracy in reverse position: 0.75 mm/m.

**Application:** Suitable for horizontal and vertical measurements in normal and reverse position, furthermore due to the V-groove easy placement on round components (e.g. pipes), 1 % and 2 % gradient.

**4768 0045** With fixed angle bubble level indicator for inspecting struts and 45° pipes.

**4768 0360** With a 360° rotatable angle bubble level indicator.

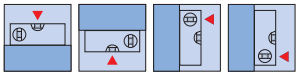
| 0360 | 25 | 53.30 (W449) | 50 x 28 |

## Spirit level with R profile

**Design:** Made of torsion resistant aluminium five-chamber-R profile, powder coated. Extra wide measuring face (4 cm). High stability during the measurement process. Three reliable guiding marking edges provide the opportunity for marking or cutting over the full length profile. With unbreakable bubble level indicator made of block acrylic glass. To ensure the accuracy, the bubble level indicators are firmly molded into the spirit level body. Removable and shock-absorbing end caps with slip stoppers. Measuring accuracy in normal position and for reverse 0.5 mm/m.

**Application:** Suitable for measuring horizontal and vertical normal and overhead measurements as well as scribing and marking.



STABILA

## Spirit level Electronic

**Design:** Made of thick-walled aluminium rectangular profile with gripping grooves, powder-coated. With access opening and a second vertical bubble level indicator. Electronic module for inclinometer. Two displays for easy reading even from above (narrow end side) with switchable lighting. Display displayed in degrees, percent, mm/m and many more. Instantaneous measurement valuation Acoustic guidance in the range of ± 2° to the vertical, horizontal and an individually adjustable reference level as well as Key-Lock for securing the reference plane. Hold and automatic switch-off function. Warning when tilting the spirit level into the second axis. Removable and shock-absorbing end caps with slip stoppers. Supplied with transport bag. Measuring accuracy of the bubble level indicator: in normal position and for reverse 0.5 mm/m. Measuring accuracy of the electronic module: at 0° and 90°: 0.05°, otherwise 0.2°.

**Application:** Suitable for horizontal and vertical measurements in normal and reverse position, as well as generally for any inclinations.

**4778** Standard design

**4779** With extra strong rare earth magnets, 5 x stronger than normal ferrite magnets.

## Telescopic spirit level

STABILA

**Design:** Made of strong aluminium rectangular profile, powder-coated. With access openings and 2 vertical and 1 horizontal bubble level indicators. Completely sealed telescope system. 3-chamber aluminium profile protects the push mechanism. Strong eccentric clamp ensures high measurement accuracy. In every position, vertical measurement at eye level. Printed length scale. Two measuring faces. The upper consists of two plates to bridge roughness. Two spacers can be inserted on the plates. Measuring accuracy in normal position 0.5 mm/m, extended 1.0 mm/m. Accuracy in reverse measurement (closed) 0.75 mm/m.

**Application:** Suitable for measuring horizontal and vertical normal and overhead measurements.

**4788** With spacers for attaching.

**4789** With extra strong rare earth magnets, 5 x stronger than normal ferrite magnets.

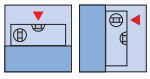
## Spirit level Pocket



STABILA

**Design:** Plastic mini-format spirit level with extra-strong rare earth magnet, 5 times stronger than normal ferrite magnets. With unbreakable bubble level indicator made of block acrylic glass. Permanently precise. Optimal readability. Supplied with belt clip. Measuring accuracy in normal position: 1 mm/m.

**Application:** For measuring horizontal normal position, Order No. 4726 007 and vertical normal position and Order No. 4726 008 when placed on UP switches and sockets.

**4726 0006** Magnetic alignment below on measuring surface.

**4726 0007** Magnetic alignment below and to side on aluminium frame. Robust aluminium core housing. **Right-angled aluminium frame** with two precisely milled measuring surfaces, **allows vertical measurements with the horizontal bubble level indicator. V-groove for easy placement on e.g. pipes.** Maximum angle deviation 0.1°.

**4726 0008** Magnetic orientation to the contact edge in back for the switch or socket outlet. Recess for screwdriver guidance. Ideal for electricians

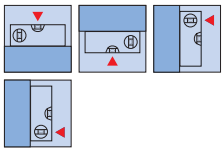
## Installation spirit level



STABILA

**Design:** Made of especially corrosion resistant aluminium alloy. Strong rectangular profile with smooth sides and powder coating. With extra strong rare earth magnets, 5 x stronger than normal ferrite magnets. Six-ring horizontal bubble level indicator for creating 1% and 2% slope. Top side with continuous H bubble level indicator bridge. Middle-centred mm scale on top of the spirit level for transferring measurements. Printed installation measurements with marking recesses. Standard sizes are particularly flagged by notches and therefore can be easily marked off. With unbreakable bubble level indicator made of block acrylic glass. To ensure the accuracy, the bubble level indicators are firmly molded into the spirit level body. Removable and shock-absorbing end caps with slip stoppers. Measuring accuracy in normal position 0.5 mm/m, measuring accuracy in reverse position: 0.75 mm/m.

**Application:** Suitable for measuring horizontal and vertical normal and reverse measurements. Ideal for installers due to mm scale and installation dimensions.

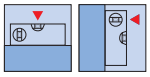
| 0100 | 100 | 65.70 (W449) | 50 x 20 |

## Spirit level Electric



STABILA

**Design:** Rectangular section with smooth side surfaces made of corrosion resistant aluminium alloy, powder coated. With integrated metal sleeves to mark the drilling of multiple sockets and signal boxes in both horizontal and vertical alignment. Stopper on the end caps holds the spirit level on the wall. With unbreakable bubble level indicator made of block acrylic glass. To ensure the accuracy, the bubble level indicators are firmly molded into the spirit level body. Measuring accuracy in normal position 0.5 mm/m.

**Application:** Suitable for measuring in horizontal and vertical normal position. Markings make it ideal for the electrician to tag electrical outlets.

**4726 0043** With 4 metal sleeves for marking up to 4 multiple sockets.

**4726 0120** With 8 metal sleeves for marking up to 5 multiple sockets, in addition, low current box, marking for the meter level, high countertop sockets (1150 mm). With printed measuring scale. Both sides useable.

| Order No. | Length cm | 4726 STABILA | Cross-section mm |
|---|---|---|---|
| 0043 | 43 | 31.00 | 50 x 20 |
| 0120 | 120 | 41.90 (W449) | 50 x 20 |

## Bevel protractor SLANT 200

TAJIMA

**Design:** Aluminium frame with magnet and rotating dual measurement role. For one-handed surveying.

**Application:** Suitable for horizontal and vertical normal measurements as well as measurements of inclination angles and gradients.

| Order No. | Length mm | 4792 TAJIMA |
|---|---|---|
| 0200 | 252 | 53.00 (W569) |

## Angle measurement device Winkelfix

**Design:** Quick ad reliable readability of 0.5° with an accuracy of 0.25°. With integrated horizontal and vertical bubble and analogue display. The respective angle position can be locked into place using the locking screw. Robust design for tough conditions.

**Application:** For simple transmission and measurement of angles.

| Order No. | Stock length mm | 4707 Nedo | Model | Weight kg | Compass tip | Measurement range ° |
|---|---|---|---|---|---|---|
| 0300 | 300 | 142.50 | Shorty | 0.7 | no | 180 |
| 0430 | 430 | 157.50 | Mini | 1.0 | no | 180 |
| 0600 | 600 | 176.50 (W466) | MAXI | 1.4 | yes | 180 |

## Digital angle measurement device ArcoMaster

**Design:** Robust aluminium housing with one vertical and one horizontal bubble, one illuminated LC display each on the front and rear sides and a double-sided extendable and foldable measuring arm for angular measurement in areas which are hard to access. Accuracy ± 0.2°. Both displays can be rotated by 180° at the press of a button. Automatic switch-off after 3 minutes; for work without visual contact to the display, the hold function (measurement value memory) can be used, automatic calculation of the bisectors. Supplied with 2 Mignon batteries AA/LR06, 1.5 V, in carrying case.

**Application:** For simple transmission and measurement of angles, even in areas which are hard to access.

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).

| Order No. | Stock length mm | 4709 Laserliner | Measurement range ° | Weight kg |
|---|---|---|---|---|
| 0040 | 400 | 114.00 | 0–220 | 0.8 |
| 0060 | 600 | 177.50 (W465) | 0–220 | 1.1 |

## Digital protractor AWM

NEW

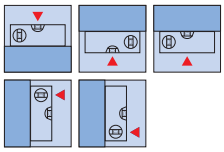
**Design:** Digital display with large digits for easy readability of measured values, lighting can be activated. RESET function enables the quick measurement of a complementary angle. The HOLD function replaces the locking of the arm – for reliable measurements at locations that are difficult to access. Automatic switch-off when not in use after 5 minutes. Measuring accuracy ± 0.1°. Supplied with 2 micro-batteries AAA/LR03.

**Application:** For simple transmission and measurement of angles, even in areas which are hard to access.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Stock length mm | 4793 STABILA | Measurement range ° |
|---|---|---|---|
| 0340 | 350 | 163.50 (W450) | 180 |

## Digital laser-spirit level DigiLevel Laser



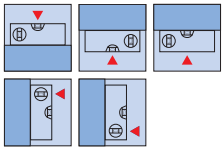
**Design:** Made of robust plastic and silver-coloured anodised aluminium. With one circular horizontal and one vertical bubble, two milled measuring faces strong holding magnets. Fast, electronic measurement of angles between 0° and 90°. The measurement value display is two decimal places between 0° and 1°, and between 1° and 90° with one decimal place. Hold function (measuring value storage) for 9 values, displayed in degrees, inch/feet or percent as well as with acoustic signal when reaching the horizontal or vertical position or a 45° angle. Wall line laser or the optical extension of the measuring surface.
Measuring accuracy of bubbles at least 0.5 mm/m for normal and reversal measurements. Accuracy of the electronic measurement at least 0.2°. Supplied with 2 micro batteries AAA/LR03, 1.5 V, in transport case.

**Application:** Suitable for horizontal and vertical normal, reverse and overhead measurements. Also for the measurement of slopes, inclines and straight lines, as well as for testing the planarity of surfaces.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Length cm | 4724 Laserliner | Cross-section mm |
|---|---|---|---|
| 0060 | 60 | 104.00 (W465) | 72 x 33 |

## Digital laser-spirit level DigiLevel Pro



**Design:** Made of silver-coloured anodised aluminium. With one circular horizontal and one vertical bubble, two milled measuring faces, shock-absorbent end caps and strong holding magnets. The illuminated display turns automatically during overhead measurements. Fast, electronic measurement of angles between 0° and 90°. The measurement value display takes place between 0° and 1° with two decimal places, and between 1° and 90° with 1 decimal place. Hold function (measuring value storage) for 9 values, displayed in degrees, inch/feet or percent as well as with acoustic signal when reaching the horizontal or vertical position or a 45° angle. Point laster for the exact transfer of heights and angles. Measuring accuracy of bubble level indicators at least 0.5 mm/m for normal and reverse measurements. Accuracy of the electronic measurement at least 0.2°. Supplied with 2 micro batteries AAA/LR03, 1.5 V, in carrying case.

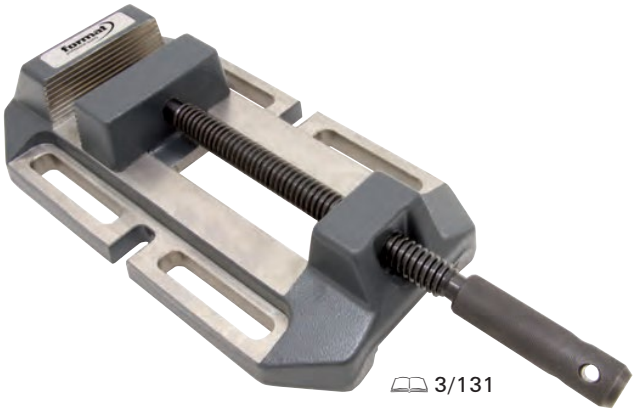
**Application:** Suitable for horizontal and vertical normal, reverse and overhead measurements. Also for the measurement of slopes, inclines and straight lines, as well as for testing the planarity of surfaces.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Length cm | 4732 Laserliner | Cross-section mm |
|---|---|---|---|
| 0300 | 30 | 75.30 | 60 x 33 |
| 0600 | 60 | 111.00 (W465) | 60 x 33 |

## Drilling machine vice

Forged, extremely stable and large clamping range.



📖 3/131

## Mohs scale of hardness

Mohs' hardness, (Ritz hardness), introduced to mineralogy by F. Mohs 1822 and still the standard and functional method for determining hardness today acc. to ten degrees of hardness, each degree of hardness being represented by a frequently-found mineral. Each mineral classified in this hardness scale (Tab.) can leave a scratch in the previous one, and is itself scratched by the mineral next-higher on the scale. If an unknown mineral is scratched e.g. by apatite (hardness 5) and if it can even be scratched by fluorite (hardness 4), then the material has a hardness between 4 and 5. The degree of hardness of the minerals are so large that the direction dependency of the minerals (with the exception of distene with hardness degrees of 4 and 6) is not significant. Minerals up to hardness 2 can be scratched with a fingernail; up to hardness 4 they can be scratched using a knife, whereas window glass can be scratched by all minerals with a hardness > 6.

| Degree of hardness | Stand mineral |
|---|---|
| **1** | Talcum |
| **2** | Gypsum or halite (rock salt) |
| **3** | Calcite (calcareous spar) |
| **4** | Fluorite |
| **5** | Apatite |
| 6 | Adular |
| 7 | Quartz |
| 8 | Topaz |
| 9 | Corundum |
| 10 | Diamond |

## Bedding-in paste

**Application:** For inspection of the surface quality. Apply the paste onto the processed parts and rub them against each other. The evenness of the coloured layer provides information on the processing quality.

| Order No. | Design | 4807 | Colour |
|---|---|---|---|
| 0080 | Tube 60 ml | 9.95 | blue |
| 0250 | Tin 225 ml | 17.85 | blue |
| | | (W475) | |

## Marking spray/fluid

**Design:** Quick-drying, non-reflecting, highly adhesive and easy to remove.

**Application:** For marking processed areas on metal surfaces. Paint or spray on thinly and leave to dry briefly. Carry out marking work and then remove again using solvent spray.

| Order No. | Design | 4808 | Colour |
|---|---|---|---|
| 0300 | Spray can 400 ml | 17.70 | blue |
| 0500 | Small pot 500 ml | 19.25 | blue |
| 1300 | Spray can 400 ml | 17.70 | red |
| 1500 | Small pot 500 ml | 18.95 | red |
| | | (W475) | |

## Colour marker pen

**Design:** Quick-drying, non-reflecting, highly adhesive and easy to remove.

**Application:** For accurate marking of processed areas on metal surfaces. Paint on thinly and leave to dry briefly. Carry out marking work and then remove again using solvent spray.

| Order No. | Colour | 4810 |
|---|---|---|
| 0001 | blue | 12.20 |
| | | (W475) |

## Digital thermometer ThermoTester

**Design:** Digital thermometer for insertion or submersion for several areas of application, quick response and measuring times with large LC display. Accuracy 1.5 % ± 2 °C, resolution 0.1 °C. Supplied with protective cap and battery LR44, 1.5 V.

**Functions:** Hold function, min./max. value display, measurement value display switchable from °C to °F.

| Order No. | Measurement range | 4910 Laserliner | Dimensions mm |
|---|---|---|---|
| 0005 | –40 °C to 250 °C | 11.10 (W465) | 33 x 210 x 20 |

## Digital thermometer ThermoMaster

**Design:** Digital thermometer with impact-proof enclosure and protective rubber sleeve, illuminated and clear LC display. Dual K-type inputs for thermal elements for the differential measurement of two temperatures. With unfolding leg for laboratory use, 1/4" stand connection for flexible locking in stationary superstructures. Switchable resolution from 0.1 °C to 1 °C. Supplied with two ThermoProbe K sensors (-50 °C to 200 °C) and E-block battery 6LR61 9 V, in carrying case.

Accuracy:
–50 °C ... 0 °C/± 2 °C
0 °C ... 1000 °C/± (0.5 % of the display value +1 °C)
1000 °C ... 1300 °C/± (0.8 % of the display value +1 °C)

**Functions:** Hold function, max. function (determines limit value exceedances during prolonged measurements).

| Order No. | Measurement range | 4910 Laserliner | Dimensions mm |
|---|---|---|---|
| 0010 | –50 °C to 1300 °C | 88.20 (W465) | 162 x 76 x 38.5 |

## Temperature sensor

**Design:** Temperature sensor with heat-resistant handle, accuracy class 2.

**Note:** Temperature sensor only for ThermoMaster and ThermoSpot-Vision.

**4910 0050** **ThermoSensor Air,** protected by a metal sleeve (Ø 6.5 mm), for air and gas temperatures.

**4910 0055** **ThermoSensor Tip,** for inserting into soft, highly-viscous materials.

**4910 0060** **Thermo Sensor Touch,** as surface probe for solid surfaces.

| Order No. | Measurement range | 4910 Laserliner | Length mm |
|---|---|---|---|
| 0050 | –50 °C to +800 °C | 49.70 | 165 |
| 0055 | –50 °C to +800 °C | 49.70 | 165 |
| 0060 | –50 °C to +400 °C | 54.40 (W465) | 165 |

0050 0060

## Temperature gauge ThermoSpot One

NEW

**Design:** Temperature gauge with LC display and targeting laser. This contactless measuring method is ideal for temperature measurements in areas which are hard to access. Dangerous measuring zones such as moving machine parts or electrical installations can also be measured. The largest measurement value is shown on the display during the measurement; the last measurement is saved briefly. The measured value display is switchable between °C and °F, laser wavelength: 650 nm, laser class: 2M, <5 mW. Supplied with 2 batteries AA/LR06, 1.5V.

Accuracy:
–38 °C to 0 °C/± 2.55 °C
0 °C to 365 °C/± 2.5 °C

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).

| Order No. | Measurement range | 4914 Laserliner | Dimensions mm |
|---|---|---|---|
| 0350 | –38 °C to 365 °C | 28.70 (W465) | 155.5 x 113 x 40 |

## Infrared thermometer ThermoSpot Plus

NEW

Laserliner Innovation in Tools

**Design:** Housing with impact-protection rubber coating and illuminated LC display. Temperature measurement range from –38 °C to 600 °C, optic 12:1. Integrated laser (8-point laser circle) for precise targeting of the measuring point, laser class 2M / < 1 mW. The emissivity can be adjusted to between 0.01 and 1.00. The measurement value display can be switched between °C and °F, whilst still showing the largest value (min./avg./max. function) and the last measurement value stored temporarily (hold function). Supplied with 2 batteries AAA/LR03, 1.5 V.

**Application:** For **surface temperature measurement** at points which are hard to access and in dangerous areas, such as moving machine parts or electrical installations.

**Note:** Replacement battery: (Order No. 9041 0018, 📖 9/12).

| Order No. | Measurement range | 4914 Laserliner Innovation in Tools |
|---|---|---|
| 0105 | –38 °C to 600 °C | 67.50 (W465) |

## Infrared thermometer CondenseSpot Plus

NEW

Laserliner Innovation in Tools

**Design:** Housing with impact-protection rubber coating and illuminated LC display. Temperaturmessbereich von –40 °C bis +365 °C, Optik 12:1. Integrated laser for precise targeting of the measuring point, laser class 2M/< 1 mW. The emissivity can be adjusted to between 0.10 and 0.99. With colour alarm function, heat bridge warning with colour display. The measurement value display can be switched between °C and °F, whilst still showing the lowest, average or largest value (min./avg./max. function) and the last measurement value stored temporarily (hold function). The integrated hygrometer determines the relative humidity and calcultes the dew point temperature. Supplied with 2 batteries AAA/LR06, 1.5 V.

**Application:** For surface temperature measurement at points which are hard to access and in dangerous areas, such as moving machine parts or electrical installations as well as for the measurement of ambient temperature, relative humidity and dew point temperature. Plus the device enables the localization of heat bridges and potential accumulation of condensate.

**Note:** Replacement battery: (Order No. 9939 1015, 📖 9/12).

| Order No. | Measurement range | 4914 Laserliner Innovation in Tools |
|---|---|---|
| 0205 | –40 °C to 365 °C | 87.40 (W467) |

## Material moisture measuring device MoistureMaster

NEW

Laserliner Innovation in Tools

**Design:** The illuminated dot matrix view shows the graphical as well as numerical measuring values. With 12 colour LEDs that display the degree of moisture or dryness of the measured material, plus a warning sound for wet materials. rMenu system with 22 languages, 62 selectable material indicators (56 types of wood and 6 construction materials). The device switches off automatically after 2 minutes when not in use. Supplied with E-block battery 6LR61, 9 V, in carrying bag.

Measurement range/accuracy:
Cement screed: 0 % … 9.7 %/± 0.5 %
Anhydrite screed: 0 % … 8 %/± 0.5 %
Gypsum: 0 % … 45 %/± 0.5 %
Aerated concrete: 0 % … 48 %/± 1 %
Concrete: 0 % … 9.7 %/± 0.5 %
Lime brick: 0 % … 9.9 %/± 0.5 %
Wood: 0 % … 60 %/± 2 % (6 % … 30 %)

**Application:** Material moisture is indicated in % by placing onto the surface of the material (non-destructive).

**Note:** Replacement battery: (Order No. 9041 0025, 📖 9/12).

| Order No. | Operating temperature °C | 4927 Laserliner Innovation in Tools | Dimensions mm |
|---|---|---|---|
| 0007 | 0–40 | 202.00 (W465) | 154 x 81 x 36 |

## Wood and building moisture analyser DampMaster Compact

NEW

Laserliner Innovation in Tools

**Design:** Stable, ergonomic enclosure with protective rubber ring with with large, illuminated LCD display. Shows wood groups, building materials, measurement value, bar display, wet-dry indication, minimum and maximum values. Can be switched from °C to °F, automatic and manual temperature compensation, self-test function, exchangeable measuring tips and automatic deactivation. Supplied with protective cap with self-test function and 4 batteries AAA/LR03, 1.5 V, in carrying bag.

Accuracy:
Wood with 0–30 % moisture: ± 1.0 %
30–60 % moisture: ± 2.0 %
60–90 % moisture: ± 4.0 %
Other materials: ± 0.5 %

**Application:** For the measurement of moisture in 3 groups of wood and 8 construction materials.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Measurement range % | 4922 Laserliner Innovation in Tools |
|---|---|---|
| 0007 | 0–90 | 177.50 (W465) |

## Noise meter SoundTest-Master

Laserliner Innovation in Tools

**Design:** Measuring instrument with illuminated, clear LC display, with selectable time evaluation for optimum adjustment to noise dynamics. With 16000 memory points or realtime logging on the PC. With switchable analog display for visual assessment. Can be calibrated and adjusted using a standard noise level calibrator (94 dB/1kHz). Microphone with removable wind guard. Analog outputs DC and AC. Supplied with software and 6 micro batteries AAA/LR03, 1.5 V, in carrying case.

Frequency range 31.5 Hz – 8000 Hz. dynamic range 50 dB, noise level resolution 0.1%, accuracy ± 1.5 dB.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Noise level dB (A)/dB (C) | 4929 Laserliner Innovation in Tools | Dimensions mm |
|---|---|---|---|
| 0005 | 30–130/30–135 | 177.50 (W465) | 245 x 80 x 35 |

## Layer thickness measuring instrument CoatingTest-Master

Laserliner Innovation in Tools

**Design:** Measuring device for determining non-metallic layers on metal substrates. The layer thickness measurement takes place using the indication and eddy-current principles. With illuminated, clear LCD display and USB interface for the transmission of measurement data and evaluations via software. The small measuring head permits highly accurate measurement of the layer thickness. Internal memory for 400 measurement values. Supplied with calibration references, software, USB cable and 2 micro batteries AAA/LR03, 1.5 V, in plastic case.

Accuracy 0–850 µm (± 3 % + 1 µm), 850–1250 µm (± 5 %).

**Application:** Automatic detection of the subsurface materials (ferrous/ferromagnetic, non-ferrous/non-ferromagnetic). One-point and two-point calibration to increase measuring accuracy. Min./max./avg. display.

**Note:** Replacement battery: (Order No. 9041 0023, 📖 9/12).

| Order No. | Measurement range µm | 4926 Laserliner Innovation in Tools | Dimensions mm |
|---|---|---|---|
| 0005 | 0–1250 | 202.00 (W465) | 110 x 50 x 23 |

## Parallel vice

**Design:** Die-forged, jaws and anvil inductive-hardened (52–58 HRC), **with extra large anvil and highly moulded clamping jaws,** which allow for greater clamp depth. Anvil surface suitable for straightening and compressing work. Front-opening, precise tightening due to adjustable guide rail, which is protected from contamination by scrapers, with measurement scale.

**5013** With holder for swivelling and interchangeable pipe clamping jaws.

**Note:** For swing clamps and replacement pipe rams see (Order No. 5028 and 5029).

**5014** With welded pipe-clamping jaws.

## Parallel vice

**Design:** Die-forged, jaws and anvil inductive-hardened (52-58 HRC), anvil surface suitable for straightening and compressing work. Front-opening, precise clamping due to adjustable bearing, which is protected from dirt by a wiper.

**5015** With holder for swivelling and interchangeable pipe clamping jaws.
**Note:** For swing clamps and replacement pipe rams see (Order No. 5028 and 5029).

**5010** With welded pipe-clamping jaws.

5028

5029

## Precision parallel vice

**Design:** Heavy, solid design made of high-strength grey cast iron, **the best clamping precision due to the long and precise dovetail guide.** Concealed, dirt-proof and smooth-running acme thread spindle, interchangeable and reversible hardened steel jaws, integrated pipe clamping jaws, opens to rear and with large anvil surface for simple straightening work.

**Application:** Suitable for multiple uses due to its solid construction and especially precise guiding/clamping.

| Order No. | Jaw width mm | 5004 LEINEN | Jaw span mm | Clamping depth mm |

5005

## Parallel vice

**Design:** Solid design, fully steel-forged with hardened surface. Jaws and anvil surface-hardened (54–58 HRC), anvil surface suitable for straightening and compression work; front-opening. Precise clamping due to adjustable bearing, with double-trapezoidal thread for rapid clamping of workpieces, cover protects against penetration of metal dust and other foreign particles. With welded pipe-clamping jaws.

5051

## Rotary plate/Height adjuster

**5061** **Rotary plate,** steel-forged. Infinitely freely rotatable. Secure locking with spindle key. Closed support plate prevents dirt and chips from penetrating the guide rail. To rotate the vice 360°.

**5055** **Height adjuster,** with high-quality gas pressure spring – geared to the weight of the vice. Height can be freely adjusted up to 200 mm, and rotates 360°. Reduces workload Adapt the vice to suit body size for comfortable working and to avoid postural defects.

* Also suitable for compact vice 120 mm.

5055

## Compact vice

BROCKHAUS][HEUER

**5052** Very compact construction, made of steel, with **quick adjustment HEUER Quicklaunch.** Can be fully opened in 3 seconds – without operating the lever. Pressure spring guarantees secure locking in the desired position. Interchangeable, reversible jaws with smooth and serrated clamping surface. Integrated pipe clamping jaws for pipes between 15 and 50 mm.

**Note:** Despite a jaw width of 120 mm, hole spacing in foot corresponds to a vice with jaw width of 100 mm.

**5053** Robust table clamp with strong clamping spindle for simple and secure operation. For flexible, damage-free fixing of a Brockhaus-Heuer vice with 100 mm jaw width or the compact vice with 120 mm jaw width to the worktop.

## Pair of magnetic protective vice jaws

NEW

SCANGRIP INNOVATION FROM DENMARK

**Design:** With magnet. Suitable for all vices with respective jaw width, also machine vices.

**5074** **Plastic, with a horizontal and a vertical prism.** Ideal for clamping workpieces of a very small diameter.

**5075** Aluminium profile, right-angled and plane-parallel, **with small horizontal prism.**

**5076** Aluminium profile, right-angled and plane-parallel, **with fibre coating.** Ideal for workpieces with smooth or delicate surfaces.

**5079** Aluminium profile, right-angled and plane-parallel, with horizontal prisms, as well as **three different-sized vertical prisms.**

**5077** Aluminium profile, right-angled and plane-parallel, **with rubber coating.** Secure hold even with low clamping pressure. Ideal for thin-walled pipes as well as workpieces made of wood or plastic.

**5078** **Felt.** Ideal for very delicate items.

## Turning/rotating clamp

UNiSPANN

**Design:** Vice, clamping bracket and screw mounting plate made from light metal alloy, hammer-tone finish and front-opening. The vice can be turned by 360° due to joint ball and rotated by 90° as well as horizontally and vertically adjustable in each angle. The serration on the top of the ball-type mandrel allows for the interchangeable mounting of other devices. With screwed, interchangeable aluminium jaws.

**5083** For screwing onto workbenches.

**5084** For clamping to workbenches up to 80 mm top thickness.

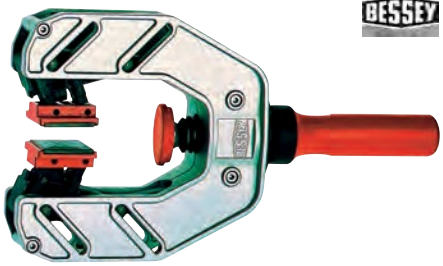
## Single-hand edge clamp

**Design:** Housing made of light, high-quality aluminium, handle made of plastic. Unique function with double spindle: the outer spindle moves the pressure jaws; the inner spindle moves the pressure plate. The pressure jaws and the pressure plate are mobile-mounted. Fixing of clamp and pressing on of edge occurs by activating the handle.

**Application:** For fast, single-hand operation. As such, you always have one hand free to set or adjust the item.

| Order No. | Jaw span mm | 5099 BESSEY | Jaw protection mm |
|---|---|---|---|
| 0005 | 10–55 | 51.50 (W519) | 45 |



## Light screw clamp U

**Design:** Upper part and rail drawn from one piece of quality steel. Slide made from break-proof zinc die casting. Plastic protective caps at upper and lower part to protect the workpiece. Fixed bracket in U-shape for overlapping clamping up to 20 mm.

**Application:** Use for overlapping clamping in limited spaces. Clamping force up to **1.5 kN.**

## All-steel screw clamp

**Design:** Slide rail, fixed bracket and pressure plate manufactured from one piece of structurally optimised, cold-drawn profile steel. Mobile bracket made of forged, galvanised zinc-plated heat-treatable steel, smooth-running spindle with rolled, cold-twisted, burnished trapezoidal thread, **with wooden handle** and mobile pressure plate.

**Application:** Flexible clamping for gentle holding of workpieces. For high clamping forces up to **5 kN** with low tool weight.

## All-steel screw clamp

**Design:** Slide rail, fixed bracket and pressure plate manufactured from one piece of structurally optimised, cold-drawn profile steel. Mobile bracket made of forged, galvanised zinc-plated heat-treatable steel, smooth-running spindle with rolled, cold-twisted, burnished trapezoidal thread, and with mobile pressure plate.

**Application:** Flexible clamping for gentle holding of workpieces. For high clamping forces with low tool weight.

**5134** With 2-component plastic handle, **square-shaped for improved force transmission.** Clamping force up to **5 kN.**

**5132** With ergonomic 2-component plastic handle. 20 % more clamping force per spindle rotation due to optimised rail profile. Greatest security due to linear force transmission at the new mobile bracket. Clamping force up to **6 kN.** Turntables with radii from 80 mm can be swapped without tools.

## All-steel screw clamp OMEGA

**Design:** Slide rail and fixed bracket manufactured from one piece of structurally optimised, cold-drawn profile steel. **Patented OMEGA bend provides a maximum of flexibility and security Clamping force is retained longer also with strong vibrations.** Mobile bracket made of forged and galvanised zinc-plated heat-treatable steel. The smooth-running spindle with rolled, cold-twisted and burnished trapezoidal thread. The mobile pressure plate (order no. 5104) can be exchanged for the respective purpose without tools.

With ergonomic 2-component plastic handle.

**Application:** Flexible clamping for the sensitive and very precise holding of items. The OMEGA bow ensures more accurate clamping pressure. For high clamping forces with low tool weight. Clamping force up to **5 kN.**

## All steel lever clamp

**Design:** Slide rail, fixed bracket and pressure plate made from one piece of structurally optimised, cold-drawn profile steel; mobile bracket made from forged and galvanised zinc-plated heat-treatable steel; **raster mechanism for regulated and secure clamping,** cam made from wear-resistant sintered steel; with plastic-covered release lever; swivel-mounted, hardened and galvanised zinc-plated steel pressure plate, with ergonomic handle.

**Application:** For clamping in little time and with little force.

**5100** Without slip guard.

**5108** **With slip guard.** 10 % more clamping force due to optimised rail profile, clamping force created up to 5 times faster. Clamping force up to **8.5 kN.**

## Magnesium lever clamp KliKlamp®

**Design:** Slide rail made from one piece of structurally optimised, cold-drawn profile steel; mobile bracket and fixed bracket made from **high-strength and lightweight magnesium,** raster mechanism for regulated and secure clamping; with ergonomic handle; mobile pressure plate and retaining ratchet made from shatterproof, glass-fibre-reinforced plastic. Fixed bracket with four-way prism below the removable plastic protective cap.

**Application:** For clamping in little time and with little force. Clamping force up to **1.2 kN.**

| Order No. | Jaw span mm | 5117 BESSEY | Jaw protection mm | Slide rail mm |
|---|---|---|---|---|
| 0012 | 120 | 17.40 | 80 | 20 x 5 |

## Single-hand clamp

**Design:** Slide rail, fixed bracket and pressure plate made from one piece of structurally optimised, cold-drawn profile steel; mobile bracket made from forged and galvanised zinc-plated heat-treatable steel; **casing and ergonomic single-hand clamping lever made from glass-fibre-reinforced polyamide,** can be operated both using the handle and from the rail side, **with button to move the mobile bracket quickly.** A guide bushing keeps the pressure plate straight; with 2-component plastic handle. The screw clamps are fitted with removable plastic protective caps on the pressure plate and on the upper part for gentle clamping.

**Application:** Fix with clamping lever in one move, without relocating, clamping and opening via a 2 component handle, as usual. Also excellently suited for over-head works. Clamping force up to **3.5 kN.**

## High performance clamp

**Design:** Slide bracket made of forged tempered steel for maximum safety at high loads. Tool-free removable end-stop for quick repositioning the slide bracket for spreading or to exchange for other slide bracket variations on a modular basis. Wear-resistant, heat-treated spindle. Heat resistant special pressure plate, swivelling up to 35°. For jaw span 3000 mm, optionally with hardened and oil-soaked sintered steel insert for extremely long life due to excellent sliding and fail-safe properties.

**Application:** For clamping and spreading with high clamping forces and large jaw spans over the entire range of metal and wood working. Clamping force up to **6.5 kN** up to jaw span 2000 mm and up to **9 kN** for span 3000 mm.

| Order No. | Jaw span mm | 5072 BESSEY | Jaw protection mm | Slide rail mm |

## Steel bar clamp

**Design: With clamping mechanism located outside the working area.** Slide rail, fixed bracket and pressure plate made from one piece of structurally optimised, cold-drawn profile steel; mobile bracket made of heat-treatable steel in precision-casting process, heat-treated and galvanised zinc-plated. The smooth-running spindle with rolled, cold-twisted and burnished trapezoidal thread is protected from spatter. Pressure plate made of high-quality and burnished cast with prism, pivots to 30°. With removable end-stop for quick resetting of the mobile bracket for strutting. With pushed-through T-handle.

**Application:** Particularly for installation and welding works in small openings, at short protrusions and the smallest of space. Clamping force up to **7.5 kN.**

| Order No. | Jaw span mm | 5119 BESSEY | Jaw protection mm | Slide rail mm |

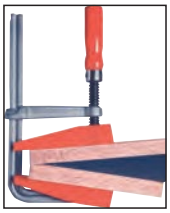
| 0020 | 200 | 67.30 (W510) | 105 |

## Surface clamps

**Design:** Slide rail, fixed bracket and pressure plate made from one piece of structurally optimised, cold-drawn profile steel; mobile bracket made of forged and galvanised zinc-plated heat-treatable steel; smooth-running spindle with rolled, strain-hardened and burnished trapezoidal thread. Clamping occurs with the 2 large, tiltable super polyamide clamping surfaces, reinforced with special steel inserts. With wooden handle.

**Application:** For flexible and gentle clamping, and for the sensitive holding of items. The two large clamping surfaces allow you to clamp items with both linear and angled contact surfaces and to fix mitre joints. Clamping force up to **5 kN.**



| Order No. | Jaw span mm | 5124 BESSEY | Jaw protection mm | Slide rail mm |
|---|---|---|---|---|
| 0020 | 200 | 33.50 (W519) | 100 | 19.5 x 9.5 |

## Parallel clamp (quick-action clamp)

**Design:** Jaw made of quality steel, mobile clamp jaws made of hardened steel. Spindle with burnished trapezoidal thread and locking handle.

**Application:** For the internal and external clamping of various profiles.

| Order No. | Jaw span mm | 5122 TURNUS |
|---|---|---|

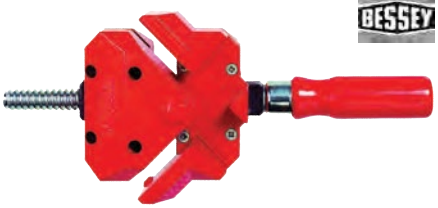
| 0025 | 0–150 | 45.00 (W527) |

## Angular clamp for wood

**Design:** Body and movable jaws made of plastic-coated die-cast zinc. With wooden handle.

**Application:** For right-angled holding, fixing and aligning of items, also for T-joints. Automatically adjusts to different work piece thickness. Also suitable for plastic and delicate items.



| Order No. | Jaw span mm | 5115 BESSEY | Max. opening mm | Jaw height mm | Jaw length mm |
|---|---|---|---|---|---|
| 0005 | 2 x 55 | 41.90 | 30 | 30 | 46 |
| 0010 | 2 x 100 | 63.90 (W510) | 60 | 36 | 80 |

## Angular clamp for metal

**Design:** Body and clamping jaws made of zinc-plated cast iron; trapezoidal thread made of copper-plated steel, therefore no adhesion of welding beads. The spindle nut is simply supported. With long holes on the side and push-through locking handle.

**Application:** For right-angled holding, fixing and aligning of items, also for T-joints. Suitable for installation on welding and machine tables.

| Order No. | Jaw span mm | 5121 BESSEY | Max. opening mm | Jaw height mm | Jaw length mm |

## Power-assembly pliers

**Design: DIN ISO 9242.** Made of special grade tool steel, hardened and tempered in oil, head polished, inductively hardened blades (61 HCR). Slim design for binding low-lying iron. Cutting impact cushioning after severing the binding wire. **25% reduced effort** due to optimum transmission when compared to normal mechanic's nippers of the same length.

**Application:** For twisting and cutting binding wire from the roll in one step.

**5140** Head polished, black atramentised pliers.

**5143** Head and handle zinc-plated.

## Tip combination pliers

NEW

KNIPEX

**Design:** Made of special grade, special tool steel; hardened and tempered in oil. Extremely torsion-proof, tapering jaws with milled groove to hold and pull out nails, pins etc. as well as gripping zone for flat and round material. Gripping area convex on one side for particularly secure holding of flat material. Particularly easy cutting die to high-transmission power joint.

**Application:** Ideal for work at hard-to-reach places and as a practical helper on-the-go.

**516A** **Polished head,** handles with plastic coating.

## Gripping pliers (needle-nose pliers)

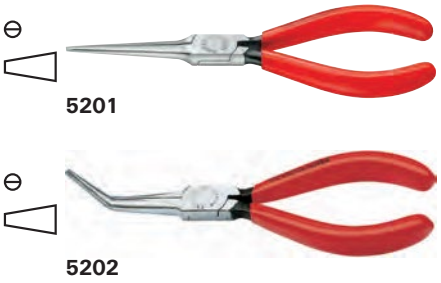
**Design:** Made of chrome-vanadium electric steel, oil hardened and tempered. **Polished head,** with particularly long, smooth-ground jaws, edges carefully deburred, plastic-covered handles.

**Application:** For the finest assembly, bending and adjusting work.

**5201** Straight jaws.

**5202** 45° angled jaws.

| Order No. | Length mm | 5201 | 5202 | Jaw length mm |
|---|---|---|---|---|
| 0160 | 160 | 20.20 (W525) | 22.40 (W525) | 55.0 |



## Adjusting pliers

**Design: DIN ISO 5235.** Made of special grade, special tool steel, hardened and tempered in oil. **Polished head,** polished grip zones, edges carefully deburred, plastic-covered handles.

**Application:** For gripping construction components and wires of the smallest diameters as well as for bending contact and relay springs.

| Order No. | Design | 5209 KNIPEX | Length mm | Jaw length mm |
|---|---|---|---|---|
| 0005 | Flat, pointed jaws | 17.00 | 135 | 34.0 |
| 0010 | Flat, wide jaws | 16.65 (W525) | 135 | 34.0 |

## Radio pliers, straight

**Design: DIN ISO 5745.** Hardened and tempered in oil. **Polished head,** flat-round, straight jaws, serrated grip areas, blades additionally inductively hardened (61 HRC).

**Application:** For gripping and cutting work in precision mechanics.

**5214** Made of special tool steel, handles plastic coated.

**5218** Made of vanadium electric steel, forged, handles plastic coated.

**5221** Made of vanadium electric steel, forged, handles with multi-component plastic covers.

## Plastic side-cutting pliers

**Design:** Made of vanadium electric steel, hardened and tempered in oil, with opening spring. **Polished head.** Cutting surface ground flat, without bevel.

**Application:** For smooth cutting (as there is no bevel) of spouts on plastic parts or soft materials such as lead.

**532A** NEW Straight blades. Handles with multi-component plastic covers.

**5326** Straight blades. Plastic-covered handles.
**Length 160 mm:** Extra long blades for the finest work, even in tight spaces. 25% higher cutting performance due to the improved leverage ratio when compared with normal side-cutting pliers of the same length.

**5328** 45° angled cutting. Plastic-covered handles.

**5330** 85° angled cutting. Plastic-covered handles.

## Internal circlip pliers, straight

**Design: DIN 5256, C-shape, straight.**

**Application:** For assembling internal safety rings.

**5617** Made of chrome-vanadium steel, hardened and tempered in oil, **polished head.** Especially stable tips, non-slip due to cone base. Plastic-covered handles.

**5614** Made of chromium-vanadium steel, forged, hardened and tempered in oil, **polished head.** Non-slip due to special tip shape. Plastic-covered handles.

**5619** **Precision design.** Made of chromium-vanadium electric steel, forged, **head grey atramentised,** with inserted tips made of highest-grade, drawn spring steel wire with large contact surface, hence no twisting of the rings. Utmost precision due to **screwed hinge, as such can be highly loaded** with a service life that is **10 times longer than normal in continuous operation.** Plastic-coated handles.

**5668** **Precision design with opening restriction.** As Order No. 5619, additionally with opening restriction **for standard installation in series production.**

**5618** Made of high-strength rolled steel, with interchangeable tips made of special tool steel and a detachable locking mechanism. **Head and grips black powder varnished.**

## Safety ring tool for internal and external rings

**Design:** Chrome-plated tool body, interchangeable work tips made of chrome-vanadium electro steel. Direct, short holding fixture for a secure hold of the rings. Secure opening, closing and holding of rings due to self-locking precision spindle drive. Hexagonal socket to be operated with angle screwdriver, ratchet key or cordless screwdriver.

**Application:** For the installation or de-installation of external and internal circlip in one step in areas where extreme forces have to be applied with shafts and bearings, e.g. wind and water power systems, tidal systems, generator construction, large machine construction, ship construction as well as aeronautical and space technology.

**Scope of delivery:** Circlip tool, 2 tips for internal rings Ø 6; 9 mm, 2 tips for external rings Ø 6; 9 mm, hexagonal angle screwdriver, plastic case with foam inlay.

## ESD-protected tools

For tasks and components that can be damaged by electrostatic discharge.

5/47

6/134

5/48

**General information ESD**
When using tools on parts that are endangered by electrostatic discharge (ESD – electro static discharge), the relevant standards and regulations (e.g. IEC TR 61340-5, DIN EN 61340-5, SP Method 2472) demand a controlled discharge of electrical loading for the handles of the tools in question.

## ESD electronic side-cutting pliers

**Design: DIN ISO 9654.** Made of special grade, special tool steel, hardened and tempered in oil, slim design. **Mirror-polished head,** with non-detachable and frictionless double spring for even opening. Precision blades additionally inductively hardened (HRC 62). Handles with plastic covers.

**Application:** For the finest cutting work at hard-to-access places in electrics, especially where **ESD tools** are in use.

## ESD electronics precision side-cutting pliers

**Design: Made of the finest chromium-vanadium ball bearing steel,** forged. **Anti-glare polished head, with screwed hinge** for the utmost precision and play-free operation of the pliers, as well as undetachable, frictionless double spring for even opening. **The bearing areas are precisely ground,** thereby guaranteeing low-friction movement throughout the opening area. With sharply ground and additionally inductively hardened blades (64 HRC). Handles with specially shaped ergonomic multi-component plastic covers for secure hold as well as effortless and sensitive working.

**Application:** Precision electrician's side-cutting pliers for finest, highest demands on cutting work in hard-to-access places in electrics, especially where **ESD tools** must be used.

## Universal cable-stripping knife

**Design:** Made of unbreakable fibreglass-reinforced polyamide, with hooked blade. The rotating internal blade automatically adjusts from round to rip cuts. As a result, longer cable pieces can be stripped in one operation. The cutting depth can be adjusted quickly and accurately by means of the knurled screw on the handle end.

**Application:** For the rapid and simple stripping of all standard cable types.

| Order No. | Working area ∅ mm | 5441 format |

## Cable cutter system 4-70 NEW

**Design:** Polyamide casing with lateral soft inserts for good grip. The **bracket can be exchanged without additional tools** and thus **easily adapted to the working area.** In addition, the brackets have a hole through which the round cut can be observed. The rotating TiN-coated inner knife automatically repositions the cutting blade to change from circumferential to longitudinal cutting. As a result, longer pieces of cable can be stripped in just one step. The knurled screw in the handle allows the cut depth to be adjusted quickly and with precision; markings allow quick adjustment for repeating cable types. In addition, the end of the handle contains an **exchangeable, retractable hook blade.** The blade can be adjusted to 4.6 mm mantle thickness in 0.6 mm increments by way of the 4-level depth adjustment. Supplied including 1 spare blade in the handle.

**Application:** For the rapid and simple stripping of all standard cable types.

5451 0005

5451 0110–0120

5451 0600

**Safety hook blade**
The blade protection has to be unlocked prior to cutting. Once the blade is lifted off the cutting material, the blade guard once again moves over the blade and is locked. Injuries due to slipping are excluded.

## Safety cable-stripping knife

**Design:** Compact housing made of high-strength synthetic fibreglass. Continuous adjustment of the cutting depth avoids damage to the inner conductor. Automatic changeover from round to longitudinal section.

**Application:** For accurate, fast and safe stripping of all common round cables.

**5443** **With retractable hooked blade,** locks in two positions, therefore **reduced risk of injury.**

**5446** For **stripping** all common flexible and solid conductors with a cross section of 0.5-6 mm².

## Crimping pliers with interchangeable magazine MultiCrimp®

**Design:** All loaded parts made of special grade, chromium-vanadium electro-steel, hardened and tempered in oil. **Burnished head.** Handles with multi-component plastic covers for single- and double-handed operation. Safe and dirt-protected storage of interchangeable inserts in round magazine with belt clip. High crimping quality due to precision profile and integral lock. Change of crimping profile without tools. Precise, preset crimping pressure

**Application:** Pliers and quick-change magazine for conventional crimping requirements in various crimping profiles. Available in different designs for 3 or 5 crimping profiles.

| 0005 | 3-part<br>345 x 280 x 80 mm | 272.00 | 1 automatic wire-stripping pliers (Order No. 5535 0010)<br>1 crimping system pliers without inserts (Order No. 5535 0015)<br>1 VDE cable shears (Order No. 5381 0165) |

(W525)

## Mounting tool for MC3 connectors

**Design:** Casing made of glass-fibre-reinforced plastic. With three capsules integrated into the detachable handle.

**Application:** For the easy and quick installation of MC3 solar plugs as well as the application of solar grommets.

| Order No. | Conductor cross-section mm² | 5535 KNIPEX | Length mm |
|---|---|---|---|
| 0065 | 2.5–10.0 | 135.00 (W525) | 325 |

## Automatic precision wire-stripping pliers with shaped blades

PATENTED

**Design:** Pliers made of steel, interchangeable blades made of special tool steel, hardened and tempered in oil. **Burnished head.** The precise blade shape prevents damage to the conductor and thus allows for easy stripping of difficult insulating materials. With additional cable support for better centring of multi-layered insulated conductors, also fine-core stranded wires are stripped gently. Handles with multi-component plastic covers. Supplied including longitudinal stop for the same wire-stripping lengths for series work.

**Application:** Especially suited to solar cables, especially RADOX® insulations, as well as extremely tough insulation materials, such as PTFE, polyamide, silicone or rubber. High operating comfort due to compact and handy design as well as easily operated mechanics.

| Order No. | Conductor cross-section mm² | 5535 KNIPEX | Length mm |
|---|---|---|---|
| 0010 | 1.5–6.0 | 101.50 (W525) | 195 |

## Crimping system pliers

**Design:** Made of special grade, chromium-vanadium electric steel, hardened and tempered in oil. **Burnished head.** For consistently high crimping results due to the precision profiles and unlockable locking mechanism. Crimp pressure is precisely adjusted ex works. Force enhancement due to optimum lever transmission for fatigue-free working. Handles with multi-component plastic coating. Supplied in plastic case with mounting tools, **without crimping sets.**

**Application:** To be used with exchangeable crimping sets, ideal in case of frequently changing purposes.

| Order No. | Length mm | 5535 KNIPEX |

## Tracking device MultiFinder Plus

**Design:** Backlit LCD display with user guidance. Acoustic and optical signals for ease of use and warning notices for high operational reliability. Automatic calibration on different surfaces and containment of measurement objects, one-button operation. Supplied with battery.

**Application:** For the location of joists, hollow spaces, pipes and wires in walls. In metal mode, non-live conductors below the plaster are also located.

**Measurement depth:**

| | |
|---|---|
| Stud framing (wood/metal): | 1– 4 cm |

## CableTracer Pro cable locator

**Design:** Transmitter and receiver feature a high-contrast, illuminated LCD display. Exact localising of the device under test using the bar chart, numerical display and acoustic signals; also displays the DC and AC voltage. The encoded transmitter signal means that it is possible to use up to 7 transmitters and one receiver. In addition, the device features a permanent AC voltage warning, high transmitter frequency and measuring point illumination.

**Application:** For the localising of electrical cables, fuses, circuit breakers, metal pipes as well as disconnections and short circuits in complex installations. Applicable with and without mains power, from 12 V to 400 V.

**Scope of delivery:** locating device, connector cable, measuring probes, measuring clamps and 2 6LR61 monobloc batteries.

## Voltage and continuity tester

BENNING

IP 65 | CAT IV 600 V

**Design:** Tested and **approved in line with EN/IEC 61243-3 (DIN VDE 0682 Part 401), bipolar.** Casing made of impact-resistant and unbreakable plastic, with rubber handle zone, two test handles and flexible connection cable. Direct display without push-button (high resistance), load connection via push buttons (low resistance), vibration alarm.

**Application:** For the professional testing of direct and alternating currents, as well as for phasing and polarity tests with deliberate triggering of the earth leakage circuit breaker.

**5560 0020** **DUSPOL® analog**
For the professional testing of voltage, phasing and polarity, as well as the rotary field direction.

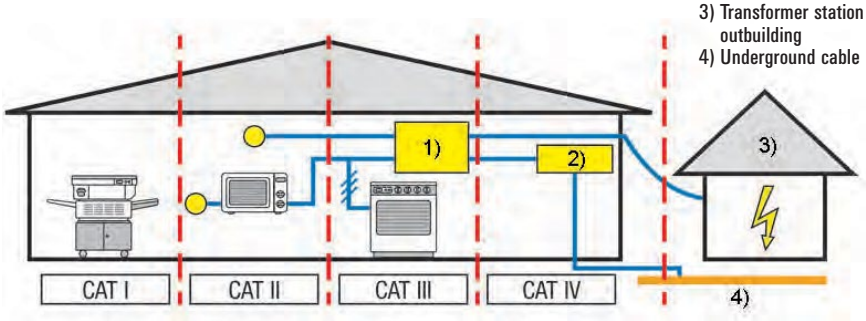
### The measurement categories CAT I to CAT IV

CAT I Applies to measurements on circuits which are not connected to mains (e.g. specially protected devices)

CAT II Applies to measurements on circuits which are electrically directly connected to the low-voltage grid (e.g. appliances)

CAT III Applies to measurements inside the building installation (e.g. distribution boards, wiring, socket outlets, switches)

CAT IV Applies to measurements on the source of the low-voltage installation (e.g. electricity meters, main connection, primary overcurrent protection devices)



## Digital multimeter for industrial application

**Design:** Casing made of impact-resistant plastic with integrated rubber protection frame. With **voltage sensor** and **TRUE RMS measuring process** for precise measurement results also in non-sinus signal sequences. Supplied with compact protective case, dual-insulated safety measurement lines and batteries.

IP 30

## Digital current clamp multimeter

**Design:** Housing made of impact-resistant, unbreakable plastic, with automatic shutdown function.

IP 30

BENNING

**Application:** For the safe current measurement at insulated cables, without having to remove or damage the insulation.

**5585 0101** **CM 1-1** Supplied with compact protective bag and battery.

**5585 0102** **CM 1-2** Supplied with compact protective case, dual-insulated safety measurement lines and batteries.

**5585 0200** **CM 2** Precise due to true RMS measurement procedure TRUE RMS. Tested and approved according to IEC/EN 61010-1 (DIN VDE 0411-1). Ideal for measuring small currents. Supplied with compact protective bag, double insulated safety measurement cables and batteries.

**5585 0501** **CM 5-1** Automatic selection of correct measuring function, incorrect measurements as a result of choosing the wrong measuring range prevented, quick reaction times due to 5 samples per second. The voltage measurement takes place with low input impedance (LoZ) for the suppression of capacitive/inductive interspersed voltages. For continuity and diode testing. Supplied with compact protective bag, double insulated safety measurement cables and battery.

**5585 0700** **CM 7** Ideal for current measurement up to 1000 A (alternate and direct current). Supplied with compact protective bag, double insulated safety measurement cables and battery.

**5585 0900** **CM 9 (stray current pliers)** Precise due to true RMS measurement procedure TRUE RMS. Resolution of 1 µA in the 6 A measuring range For locating current leakages and measuring leakage and residual currents in electrical installations (VDE 0100) and devices (VDE 0701/0702, DGUV Rule 3, Industrial Safety Ordinance). Measurement during normal operation of the plant/unit, ideal for preventive maintenance and troubleshooting, reliable and easy to locate insulation faults. Connectible low-pass filter (50–60 Hz). Supplied with compact protective bag and batteries.

**5585 1100** NEW **CM 11** Ideal for fault detection in electrical systems, controls, devices and MV electrics. Precise measuring of small direct/alternate currents with resolution of 0.1 mA. True real measuring value process TRUE RMS, measuring of standby, stray, difference, leakage and load currents. Supplied with compact protective bag, double insulated safety measurement cables and battery.

## Insulation and resistance measuring instrument IT 101

**Design:** Casing made of impact-resistant plastic. With selectable limit values for ISO measurement, green LED for test passed, red LED for test/external voltage, switchable probe tip for triggering the measuring process, internal memory, voltage measurement with low-pass filter, automatic discharge of capacitive voltage. Insulation resistance (50 V-1000 V) with calculation of the resulting current leak, polarisation index (PI) and dielectric absorption ratio (DAR).

**Application:** For insulation and low ohmic measurements on electrical systems, devices, wires, engines and generators.

**Scope of delivery:** Measuring device, switchable probes, measurement lines, crocodile clamps, rubber case, batteries and bag.

## ST 710/ST 725 device testers

**Design:** Automatic test procedure with pass/fail indication for Class I, II (III) and line test. Voltage measurement at external isolated safety plugs. Three-phase test items tested via optional measuring adapter. **The limit values are preset in line with VDE standard.** Battery capacity for 2500 test samples. Supplied with carry bag and belt, test lead with crocodile clip, power cable and batteries.

**Application:** For **safety checks (DGUV-Rule-3-tests) of electrical equipment and work materials according to VDE 0701-0702,** DGUV Rule 3, OVE/ÖNORM E 8701, NEN 3140. Suitable for electrical engineering, industry, maintenance works, servicing and communities.

BENNING

**5561 0710** **Battery operated.** Testing of electrical devices/tools with on/off button, heating devices, power tools, lights, cable reels, multiple distributors and domestic appliances. **Protective earth/contact current via alternative current leakage method.**

**5561 0725** **Battery and mains operation.** Testing of devices with mains voltage-dependent switching elements/power supply/relay, such as electronically controlled devices/ tools, information and communication technology devices and equipment that can be fully tested only with mains voltage. **Protective earth/contact current via differential measurement/direct measurement.** Data memory for 999 test objects, read out via micro-USB port. Also includes integrated real-time clock to store the measured values with test date, micro USB cable and reading software (CD).

## SET ST 755 device tester

NEW

BENNING

**Design:** Modern and intuitive operator surface via capacity touch screen with QWERTZ keyboard and help function, automatic and manual test process with good/bad display, complete test item database incl. test history can be stored on SD card, free factory update, battery-supported in case of power cut. Measurement of ground conductors, insulation resistance, ground/touch current (difference/replacement/direct measurement), function test (V/A/W) in TRUE-RMS process, testing of mobile PRCD (PRCD-S/-S+/-K), FI/RCD test type AC/A/F/B/B+. Interfaces: WLAN, Bluetooth®, 4 x USB type A, 1 x Mini-USB, 1 x RJ 45, 1 x SD-card slot.

**Application:** For **safety inspections of electrical equipment and work equipment in accordance with VDE 0701-0702, DGUV Rule 3,** Ind. Safety Ord. and **electrical medical equipment in accordance with DIN VDE 0751-1** (DIN EN 62353), hospital/nursing home beds.

**Scope of delivery:** Test device in waterproof, dust-proof (IP 67) and unbreakable case, self-compensating test lead, measuring accessories, power cable, SD card, PC software, barcode scanner, barcode labels (1000 units), test stickers (300 units).

## PV 1-1 photovoltaic installation tester

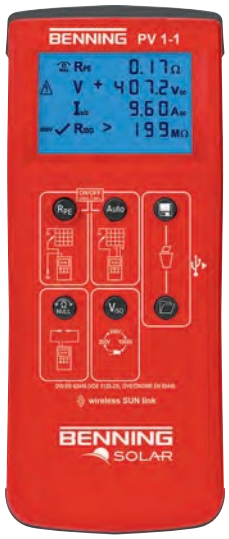
IP 40

BENNING

**Design:** With automatic test run, secure measurement connection even for PV system energy supply. **Measured data storage for 200 photovoltaic strings, USB interface for measured data download.** Integrated real time clock to save measured data with date and time stamp. **Wireless connection** to BENNING SUN 2 irradiation and temperature measurement device (Order No. 5586 0400). ISO measurement result with good/poor display, automatic display of voltage polarity with acoustic/visual warning in case of incorrect poling, direct connection to all standard PV modules with MC4 or Sunclix plug connectors.

**Application:** For installation and repeat tests of photovoltaic systems hooked up to the mains in line with VDE 0126-23 (DIN EN 62446). Suitable for Solarteure (commissioning, repeat tests, trouble-shooting), photovoltaic experts as well as service, cleaning and maintenance teams.

**Scope of delivery:** Test device, test leads, crocodile clamps, MC4/Sunclix test leads, bag, batteries and download software on CD-ROM.



| Order No. | 0300 |

## SUN 2 irradiation and temperature measurement device

IP 40

BENNING

**Design:** With calibrated photovoltaic reference cell for precise measurement of solar irradiation, 2-channel temperature sensor, digital compass, data logger for irradiation, module/ambient temperature, date/time stamp with real time clock and adjustable measuring interval (1-60 minutes), **radio link** with ca. 30 m range in the open area to photovoltaic installation tester BENNING PV 1-1 (Order No. 5586 0300) and USB interface for measurement value download.

**Application:** Ideal for the planning, commissioning and repeat tests of photovoltaic systems hooked up to the mains in line with VDE 0126-23 (DIN EN 62446) and testing of thermal solar plants (solar heat). Suitable for Solarteure (commissioning, repeat tests, trouble-shooting, cost-benefit tests), photovoltaic experts as well as service, cleaning and maintenance teams. For measuring solar irradiation, photovoltaic module and ambient temperature, compass point and angle of inclination.

**Scope of delivery:** Measuring device, bag, protective rubber holster, module/ambient temperature sensor, USB cable, reading software (CD) and batteries.

| Order No. | 0400 |

## Switchboard spanner

**Design:** Body and clip made of glass-fibre-reinforced plastic, key bearer and profile of zinc pressure die cast. Ball pen shape, with fastening clip Swivelling out the key ring means that four different key profiles can be used.

**5601 0010** With rod-shaped external square 5–6–8 mm, external triangle 9 mm, double bit 3–5 mm, bit for cross-slot screws PH 2 and universal 1/4"-bit holder with durable magnet.

**5601 0020** Current and magnetic field finder with on/off button for the no-contact identification of AC voltage and magnetic fields. Optical display using LED, voltage range 50–600 V, frequency range 50–60 Hz. Battery compartment with rotary fastener for two button cells LR44. With rod-shaped external square 6–8 mm, external triangle 9 mm, double bit 3–5 mm, bit for cross-slot screws PH 2 and universal 1/4"-bit holder with durable magnet.

| Order No. | Design | 5601 KNIPEX | Length mm |
|---|---|---|---|
| 0010 | Without voltage finder | 18.60 | 145 |
| 0020 | with current and magnetic field finder | 27.60 (W525) | 155 |

## Spanner for PG screw connections

NEW

Weidmüller

**Design:** Casing made of polyamide plastic, bracket and clamping jaws made of metal. Continuous adjustment of spanner width via countersunk screw in handle.

| Order No. | Width of keys mm | 560A Weidmüller | Length mm |
|---|---|---|---|
| 1124 | 11–24 | 77.20 | 190 |
| 2432 | 24–32 | 77.20 (W523) | 204 |

## Screw connection tool for sensor actuator cables

NEW

Weidmüller

**Design:** Blade with 1/4" receptacle for exchangeable screw attachment. Handle made from 2-component plastic

**Application:** For moulded cables, also suitable for difficult to reach plug connections.

| Order No. | Size | 560B Weidmüller | Length mm |
|---|---|---|---|
| 0008 | M8 | 59.90 | 220 |
| 0012 | M12 | 59.90 (W523) | 220 |

## Pass wrench

**Design:** Two-part combination. Checked and tested in line with DIN 57680 Part 7/ VDE 0680 Part 7.

**Application:** For setting or removing D-screw fitted bolts D II according to DIN 49516 and with attachment also for D-screw fitted bolts D III in accordance with DIN 49516, in fuse socket or outside of fuse socket.

| Order No. | Length x Ø mm | 5594 |
|---|---|---|
| 0005 | 105 x 30 | 6.80 (W516) |

## Cable retraction tape

**Design:** Made from Perlon®, with massive steel ends and pilot spring.

| Order No. | Length m | 5595 | Tape Ø mm |
|---|---|---|---|
| 0010 | 10 | 6.50 | 3 |
| 0015 | 15 | 8.50 | 3 |
| 0020 | 20 | 10.90 (W516) | 3 |

## Cable laying system

**Design:** Robust housing with no external moving parts. Tape runs in and out optimally, without running after the tape. Flexible, thrust stable fiber glass profile with double-sided sleeves M5.

**Application:** For installing electrical, telephone and antenna cables in pipe systems in domestic installations.

**Scope of delivery:** Laying machine, guide heads 8, 11 and 14 mm, 2 splices, 2 towing eyes, cable puller stockings 4-6 mm and 6-9 mm, fibreglass adhesive 5 g and 1 puller aid.

| Order No. | Length m | 5595 | Tape Ø mm | Min. bending radius mm |
|---|---|---|---|---|
| 0030 | 30 | 168.50 (W523) | 3 | 50 |

## Cable ties

**Design:** Made of polyamide 6.6, **self-quenching,** in line with standard UL94 V2 NYLON, within max. 30 seconds. High flexibility even in extreme temperature variations, largely chemical resistant and exceptionally fade resistant. Supplied as 100 pieces in a polythene bag.

**Application:** For the fixing and bundling of tubes, cables and wires.

## Assortment of heat shrink tubing

**Design:** Made of ray cross-linked polyolefin (PEX),
**Shrinkage ratio 3:1.**
Insulation class in line with VDE 0530, dielectric strength in line with ASTM D 2671.
Silicone-free, compatible with copper, as resistant as possible to UV light, solvents as well as acids and bases. Supplied in plastic case.

**Application:** Ideal for insulating, coloured labelling and as cable protection in electronics and cable manufacturing.

HellermannTyton

**5653 0100** Black, self-releasing.

**5653 0110** Multi-coloured, self-quenching (except for the transparent heat shrink tubing).

**5653 0120** Black and transparent, external wall self-releasing (except for the transparent heat shrink tubing). The tubing features **internal adhesive** that melts in the heat, thus providing protection from moisture, making them ideal for use outside.

**5653 0100**

## Water pump pliers Cobra® ES

**Design: DIN ISO 8976.** Made of chromium-vanadium electric steel, hardened and tempered in oil, **polished head,** grip zones with specially hardened teeth (61 HRC). Very slim design throughout the entire head and joint area, with long, pointed jaws. **Fast and precise setting using the button,** can be adjusted one-handed in the smallest of spaces. The pushed-through slip joint allows for a high degree of stability as a result of the double bearing. The safety guard prevents fingers from being crushed. Self-clamping to pipes and nuts, with safe handle also on flat workpieces due to three-point contact. Plastic-covered handles.

**Application:** Ideal for servicing and maintenance, device repairs, automobile trade and industry. Only minimum effort required as a result of the slim design, especially when working in narrow spaces.

## Water pump pliers SmartGrip®

**Design: DIN ISO 8976.** Made of chromium-vanadium electric steel, hardened and tempered in oil, **polished head,** grip zones with specially hardened teeth (61 HRC). Slim design throughout the entire head and joint area **Automatic adjustment of the workpiece by simply squeezing the pliers handles,** ideal for frequently surrounding a variety of workpieces, for right- and left-handed people. The inserted sliding joint enables high stability due to the double guide. The safety guard prevents fingers from being crushed. Self-clamping to pipes and nuts.

Locking lever prevents unintentional opening. Plastic-covered handles.

| Order No. | Length mm | 5613 KNIPEX | For nuts mm | For pipes inch |

## Pliers wrench

**Design: DIN ISO 5743.** Made of chromium-vanadium electric steel, hardened and tempered in oil. **Chromed head,** parallel guided, smooth gripping jaws, set using the button, can be adjusted using one hand. Work using the ratchet principle with extremely high clamping force, **10 times stronger than hand force.**

**7156** **Plastic-covered handles.**

**7157** **Handles with multi-component plastic covers.**

**Application:** Ideally suited to gripping, holding, pressing and bending items, also suitable for the gentle assembly of fine-surface fittings due to the play-free surface pressing, also suitable for breaking tiles.

## VDE pliers wrench

**Design:** Made of chrome-vanadium electric steel, oil hardened and tempered. **Chromed head,** parallel guided, smooth gripping jaws, set using the button, can be adjusted using one hand. Work in line with the ratchet principle, with extremely high clamping force – 10 times stronger than hand force. Handles with plastic coating, **insulated up to 1000 V, according to IEC 60900, DIN EN 60900, VDE 0682/Part 201.**

**Application:** Exceptionally well suited for gripping, holding, pressing and bending of workpieces, with scale for setting the gripping area away from the workpiece.

## Collar ratchet spanner

**Design:** Made of chromium-vanadium steel, matt chrome-plated. Jaw angled 15°, ring side with special hexagon profile. The ring side can be opened and attached to nuts in closed systems. In addition, the spring mechanism allows the user to work using the ratchet system. The head can be folded away due to the hinge.

**Application:** Ideal for use in closed systems, such as brake pipes, hydraulic lines, pipes etc. The foldable head can also be used in narrow places.

5731 format professional quality

**5721** Made of GEDORE vanadium steel 31CrV3 Matt chrome-plated, with handy and strong tapered shaft. Manganese-phosphate lockout bar and safety catch. **The small number of teeth makes the ratchet extremely robust, while special pawl geometry ensures a very small return angle.** Reset angle of 7° up to jaw span 15 mm, 6° up to jaw span 27 mm and 5° up to jaw span 36 mm. Jaw ground to exact width of spanner.

## Joker open-ended spanner with ring ratchet

**Design:** Made of chromium molybdenum steel with nickel-chrome coating. The straight jaw with double hexagonal profile and a reset angle of just 30° allows for efficient work even in narrow places. Handling simplified, waste reduced, risk of slipping minimised due to replaceable, hardened and serrated metal plate on the side of the mouth, which also serves as an end-stop holder and slip-off fuse.

**5727** **With jaws and a straight ring ratchet side.** Fine toothed ratchet mechanism with 80 teeth and a return angle of 4.5° on the ring side.

**572A** NEW **With jaws and a ring switchable 15° angled ratchet side.** Fine toothed ratchet mechanism with 80 teeth and a return angle of 4.5° on the ring side.

5727

572A

The metal plate serves as stop

and holder.

HAZET

## Double ring ratchet spanner

**Design:** In GEDORE vanadium steel 31CrV3. Matt chrome-plated, with handy and strong tapered shaft. Ring thin walled and flat Manganese-phosphate lockout bar and safety catch. **The small number of teeth makes the ratchet extremely robust, while special pawl geometry ensures a very small return angle.** Return angle 7° up to jaw span 14 x 15 mm, 6° up to jaw span 16 x 17 mm.

## Multiple slip joint spanner

**Design:** Made of chrome-vanadium electric steel, oil hardened and tempered. **Polished head.** Fast and precise setting using the button, can be adjusted using one hand. Self-clamping (between 17 and 32 mm) to pipes and nuts. The pushed-through slip joint allows for a high degree of stability as a result of the double bearing. The clamping protection prevents squashing injuries. Handles covered with non-slip plastic.

**Application:** For working in line with the ratchet principle, replaces open-ended spanners and adjustable wrenches for metric (10–32 mm) and imperial (3/8–1.1/4" ) for tightening work. Ideal for secure and tight gripping of rounded, rusty or paint-covered nuts and screws. Also ideal for tightening nuts.

## Stainless hexagonal offset screwdriver, long

**Design: Made of stainless steel,** hard and tough (54 HRC) due to vacuum ice-hardening. With Hex-Plus geometry. This reduces the notch effect and the destruction of the screw head, at the same time 20% more static torque. The ball head enables screwing even in inclined position.

**Application:** Special product for preventing rust in the processing of stainless steel screws.

# Spark-free tools

Fire hazard in the workplace: Wherever sparks threaten an explosion or fire, tools made of special materials and alloys are required.

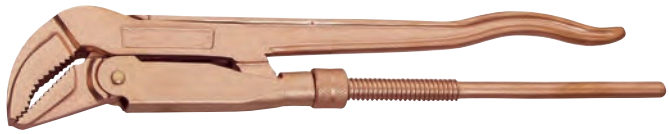
They practically eliminate spark formation and are used where it can be dangerous: This starts with the production of oil and gas and extends to military or civilian emergency services. Also the chemical industry, energy and utilities, pipeline companies, tank cleaners and paint shops rely on these tools.

**Missing an item in stock? Talk to us: we can help you.**

GEDORE

5/141

5/143



5/144

**General information:** These non-arcing tools are extremely corrosion-resistant to many media, such as seawater etc. In addition, the tools made of copper-beryllium are antimagnetic. Both alloys (copper-beryllium and special bronze) have been tested by the German Federal Office for Materials Research and Testing in Berlin. A test is undertaken in line with DIN 50049.2.2 after each batch. This quality testing guarantees that these tools fulfil the highest quality demands at all times.

**Note:** In addition, specific tests can be carried out on each tool. (Prices for this are available upon request.)

**Application:** Non-arcing tools are used across the globe in sectors where sparks pose a risk of explosion or fire, for example in oil and gas production, petrol chemistry, chemical industry, pipeline operations, armed forces, armies, emergency services, tank cleaning and paint shops.

## Double open-end spanner, non-arcing

**Design:** Similar to DIN 3110, made of special bronze.
With flat heads and non-slip shaft.

## Hexagon socket wrench set 1/4"

**Design:** Tools made of chrome-vanadium steel, which have hexagon and square sockets with rounded corners for protection of drive and screw head. Supplied in sturdy, painted metal case with carrying handle. The tools are held securely housed in a 2-colour foam insert, thus missing tools are recognised immediately. In the cover there is another foam insert with a schematic indication of tool placement.

## Hexagon socket wrench set 1/4" Zyklop Metal

**Design:** Tools made of chrome-vanadium steel. Full metal ratchet made of chrome-molybdenum, forged. Extremely slim, with long lever for easy access to narrow areas and transfer of higher torque, ball lock for secure fit of nuts. Low weight for high mobility, high robustness. Delivery in a very compact fabric box, protects sensitive surfaces.

**6000 0004** With push-through square (Push). 76-fold serrated, rear swivel angle 4.7°.

**6000 0006** With switch lever (Switch) 72-fold serrated, rear swivel angle 5°.

## Hexagon socket wrench set 1/4" Zyklop Speed

**Design:** With tough bits and nuts. The Zyklop ratchet combines the benefits of 5 different ratchet types in one tool and through its special design achieves very high working speeds. The ratchet head pivots freely and can be locked by the slide switch mounted on both sides in 5 positions (90°, 75° in both directions and 0°). Bidirectional switching and triggering the nut is possible in any position. **72-fold serrated, rear swivel angle 5°.** Allows screwing bits and nuts with just one tool. Delivery in a very compact fabric box, protects sensitive surfaces.

**Application:** Tough bits suitable for universal applications. Suitable for turning screws by hand and machine.

## Ratchet 1/4" Zyklop Metal

**Design:** Full metal ratchet made of chrome-molybdenum, forged. Finely toothed, with a particularly small return angle. Extremely narrow head, with long lever for easy access to narrow areas and transfer of higher torque, ball lock for secure fit of nuts. Low weight for high mobility, high robustness.

**6000 0016** With push-through square (Push). **76-fold serrated, rear swivel angle 4.7°.**

**6000 0017** With switch lever (Switch) **72-fold serrated, rear swivel angle 5°.**

## Zyklop Metal

Especially narrow head

Double ratchet teeth, rear swing angle max. 5°

Longer handle for high power transmission

Wera Zyklop

## Reversible ratchet 1/4" Zyklop Speed

**Design:** DIN 3122 D 6.3 - ISO 3315, with ball locking device. Made of vanadium-chrome steel with Kraftform handle and freewheeling sleeve. Switching occurs via a hub Bidirectional switching and triggering the nut is possible in any position. The ratchet head is ergonomically shaped and, due to flywheel mass design in connection with the freewheel sleeve allows for fast-paced work. The ratchet head pivots freely and can be locked by the slide switch mounted on both sides with 5 positions (90°, 75° in both directions and 0°). **72-fold serrated, rear swivel angle 5°.** With Kraftform handle for fatigue-free working.

## Screwdriver bit 1/4" for Phillips screws

**Design:** With ball locking device and knurled handle.

**6049** Made of chrome-vanadium steel, polished and chrome-plated, tips made of chrome-vanadium steel, burnished.

**6050** Made of GEDORE vanadium steel 31CrV3, polished and chrome plated, tips of GEDORE vanadium special steel, manganese phosphated.

**6849** Made of chrome vanadium steel, **TiN coated,** for improved service life, higher torque, corrosion resistance and minimal cam-out effect (better grip in the screw).

## Magnetic cable connection 1/4"

**Application:** Suitable for all standard 1/4" sockets. A strong permanent magnet holds the bar securely to FE-metals, for example, to machine covers, tool trolleys or lifting platforms. The strip can be installed horizontally, vertically or even overhead. The strip has additional drill holes for wall installation. Inserts are fixed with a 90° turn. Insert is subsequently locked with the ball. Rotating in the opposite direction unlocks the inserts so they can be removed. **Supplied without tools.**

## Hexagon socket wrench set 3/8" Zyklop Speed

**Design:** With tough bits and nuts. The Zyklop ratchet combines the benefits of 5 different ratchet types in one tool and through its special design achieves very high working speeds. The ratchet head pivots freely and can be locked by the slide switch mounted on both sides in 5 positions (90°, 75° in both directions and 0°). Bidirectional switching and triggering the nut is possible in any position. **72-fold serrated, rear swivel angle 5°.** Allows screwing bits and nuts with just one tool. Delivery in a very compact fabric box, protects sensitive surfaces.

**Application:** Tough bits suitable for universal applications. Suitable for turning screws by hand and machine.

## Magnet extension 3/8"

NEW

**Design:** DIN 3120 ISO 1174, with ball locking device. Made of GEDORE vanadium steel 31CrV3, forged and chrome-plated, spring pin manganese-phosphated. The holding magnet fixes the screw securely in the socket wrench insert. Due to spring mechanism, the holding magnet is always in direct contact with the screw head and ensures centric guiding of the screw.

## Magnetic cable connection 3/8"

**Application:** Suitable for all standard 3/8" sockets. A strong permanent magnet holds the bar securely to FE-metals, for example, to machine covers, tool trolleys or lifting platforms. The strip can be installed horizontally, vertically or even overhead. The strip has additional drill holes for wall installation. Inserts are fixed with a 90° turn. Insert is subsequently locked with the ball. Rotating in the opposite direction unlocks the inserts so they can be removed. **Supplied without tools.**

## Hexagon socket wrench set 1/2" Zyklop Speed

**Design:** With tough bits and nuts. The Zyklop ratchet combines the benefits of 5 different ratchet types in one tool and through its special design achieves very high working speeds. The ratchet head pivots freely and can be locked by the slide switch mounted on both sides in 5 positions (90°, 75° in both directions and 0°). Bidirectional switching and triggering the nut is possible in any position. **72-fold serrated, rear swivel angle 5°.** Allows screwing bits and nuts with just one tool. Delivery in a very compact fabric box, protects sensitive surfaces.

**Application:** Tough bits suitable for universal applications. Suitable for turning screws by hand and machine.

## Combined hexagon socket wrench – set 1/4" and 1/2" Zyklop Speed

**Design:** Tools made of chrome-vanadium steel. The Zyklop ratchet combines the benefits of 5 different ratchet types in one tool and through its special design achieves very high working speeds. The ratchet head pivots freely and can be fixed in 5 positions (90° and 75° in both directions, and 0°). Can be utilised as bit holder in 0° position. 72-fold serrated, rear swivel angle 5°. Ergonomic Kraftform-Plus handle with ball lock to fit the nuts securely. Right/left switching and triggering the nut is possible in any position. The tools are held securely housed in a 2-colour foam insert, thus missing tools are recognised immediately. Supplied in a stable metal case with anti-slip rubber feet.

(W526)

## Passage socket

The passage socket wrenches are particularly suitable for threaded bolts and tight installation spaces. The socket wrench inserts and ratchet have pipe cross section in order to accommodate long threaded bolts. The ratchet and the socket wrench insert are connected by means of a compact and inside hollow hexagonal system; the socket wrench inserts are plugged into the hexagonal shank of the ratchet. The drive length hidden inside the ratchet shortens the protruding part of the socket wrench insert by approximately 50% compared to the traditional system.

## Passage socket wrench set 1/2"

**Design:** Ratchet made of GEDORE vanadium steel 31CrV3, chrome plated. Socket wrench inserts made of GEDORE steel 42CrMo4 polished and chrome plated. Supplied in blue sheet steel case with foam insert.

## Magnetic cable connection 1/2"

**Application:** Suitable for all standard 1/2" sockets. A strong permanent magnet holds the bar securely to FE-metals, for example, to machine covers, tool trolleys or lifting platforms. The strip can be installed horizontally, vertically or even overhead. The strip has additional drill holes for wall installation. Inserts are fixed with a 90° turn. Insert is subsequently locked with the ball. Rotating in the opposite direction unlocks the inserts so they can be removed. **Supplied without tools.**

## Tool trolley

**Design:** Sturdy sheet steel construction, drawers with ball rack guide, middle and end catches as well as single lock against accidental opening while driving. The rear wall and the side walls have square perforations. **Centrally closed by a cylinder lock.** Work top with 10 mm thick foam inlay. High stability through enhanced wide-track rear axle, 2 large solid rubber wheels and 2 swivel casters on both sides with roll-rotation brake (total stop). Surface scratch resistant powder-coated, body in red, drawers in black.

Drawers pull out 100%

**6172 0110** With 7 pull-out drawers on one side (5 x 75; 2 x 150 mm high) with space for 3 1/3 module.

**6172 0115** With 7 pull-out drawers on one side (5 x 75; 2 x 150 mm high) with space for 4 1/3 module.

## Rolling workbench

NEW

**Design:** Sturdy sheet steel construction with 2 sliding handles, 7 drawers on front and 3 drawers on the side (all individually dividable). Drawers are guided on ball bearings and have a single lock against accidental opening while driving. Centrally closed by means of a cylinder lock. Spacious compartment with door and 2 shelves at the side, 1 large compartment with 2 shelves, with lockable roller shutter on the back, perforated side wall. 56 mm strong MDF workbench (protrusion per side 5 cm). With 2 lockable casters and 2 fixed rollers. Delivery includes 4 keys (suitable for drawers and roller shutters).

6175 0140

## Telescope tool trolley

**Design:** With swing-columns, which can also be used as handles. **Centrally closed by means of a padlock.** With spacious bottom compartment for bulky tools, two intermediate levels including four variable single partitions per level. Worktop with corrugated plastic surface and rubber strips to protect the edges. Particularly stable due to 4 solid rubber wheels, double ball bearings, including 2 lockable castors. Surface with red, scratch resistant powder coating.

**Note:** Padlock see (Order No. 7356).

| Order No. | Dimensions L x W x H mm | 6172 format | Static loading capacity kg | Weight kg |
|---|---|---|---|---|
| 0060 | 680 x 350 x 965 (465) | 539.00 (W536) | 300 | 24.5 |

## Tool trolley

**Design:** Sturdy sheet steel construction with **4 pull-out drawers on both sides, (4 x 45 mm high)** ball rack guide as well as middle and end catches. With a large bottom compartment for bulky tools as well as double-sided sliding doors made of metal to secure the entire interior. The side walls have square perforations. (10 x 10 mm). **Centrally closed by means of a padlock.** Work top with corrugated plastic surface and soft rubber strips to protect the edges. High stability through enhanced wide-track rear axle and 2 large, laterally projecting solid rubber wheels and 2 castors, one side with rolling swivel brake (total stop). In addition, the workshop trolley has a circumferential soft rubber profile strip as edge protection. Surface powder-coated scratch resistant.

**Note:** Padlock see (Order No. 7356).

| 0103 | 706 x 380 x 498 | 460.00 (W529) | 527 x 348 | 20 | 145 | 40 |

## Tool trolley type 179

**Design:** Sturdy sheet steel construction, drawers with ball rack guide, middle and end catches as well as single lock against accidental opening while driving. The side walls have square perforations, the attachments are protected from damage by indented side walls mounted inside the trolley dimensions. **Centrally closed by means of a cylinder lock.** Worktop made of solvent-resistant plastic, with compartments for sundries and labelling area. With large, highly-duty ball bearing rollers (Ø 125 mm), 2 swivel castors, both sides with roll-spinning brake (total stop) for firm footing in all directions. All wheels are equipped with thread protection, which protects the bearings against dirt and threads. Corner protectors continuous on all four sides of the vehicle. Surface scratch resistant powder-coated, body in Hazet blue, drawers in black.

**6308 0006** — **With 6 pull-out drawers on one side (3 x 80; 3 x 165 mm high).**

**6308 0007** — **With 7 pull-out drawers on one side (5 x 80; 2 x 165 mm high).**

**6308 0008** — **With 8 pull-out drawers on one side (7 x 80; 1 x 165 mm high).**

**6308 0010** — **With 10 pull-out drawers on one side (8 x 80; 2 x 165 mm).**

## Rolling workbench Type 177 W

**Design:** Rigid steel body, drawers with roller guides, middle and end catches and single lock against accidental opening while driving. The basic equipment includes 1 divider per drawer. A side wall has a square perforation, the attachments are protected from damage by indented side walls mounted inside the trolley dimensions. **Centrally closed by means of a cylinder lock.** Side panel with storage shelf. Worktop made of 30 mm thick multiplex birch plywood. With ball bearing rollers, 2 swivel castors, both sides with roll-spinning brake (total stop) for firm footing in all directions. All wheels are equipped with thread protection, which protects the bearings against dirt and threads. Surface scratch resistant powder-coated, body in Hazet blue, drawers in black.

**6311 0006** **With 6 pull-out drawers on one side (4 x 80; 2 x 165 mm high).**

**6311 0007** **With 7 pull-out drawers on one side (6 x 80; 1 x 165 mm).**

## Torque screwdriver handle TorqueFix®-Key

**Design:** With ergonomic handle. **Acoustic** signals announce when the torque is achieved. The opening moment is about 30% higher than the specified torque. Supplied in plastic box.

**Application:** For screwing with preset torque.

**Scope of delivery:** Torque screwdriver with test certificate DIN EN ISO 6789, BS EN 26789, ASME B107.14M.

## Torque screwdriver handle iTorque®

**Design:** With ergonomic plastic-metal composite handle. Simple and accurate value setting due to a turning knob integrated in the handle. With digital display for easy, continuous adjustment of the torque value. The set values are fixed automatically. Units switchable between N•m and in. lbs or N•cm and in. oz. A built-in counter records every setting and a calibration alarm sounds after 5000 uses. **Acoustic and tactile** signals announce when the torque is achieved. For use with 1/4" bits and torque interchangeable blades with hexagonal shaft (4 mm). Delivery in folding box.

**Application:** For screwing with preset torque.

**Scope of delivery:** Torque screwdriver with test certificate DIN EN ISO 6789, BS EN 26789, ASME B107.14M, interchangeable blade with bit holder 1/4" .

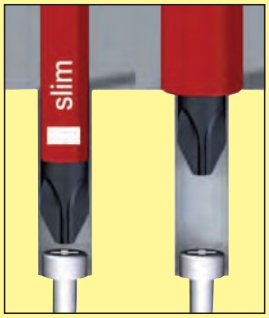
## VDE interchangeable blades

TorqueVario®-S VDE with integrated scale in combination with the slimTorque VDE bit holder and slimBits offer controlled tightening of the screw as well as safety in electrical applications. The three components (handle, bit holder, bits) offer safety up to 1000V AC/1500 V DC.
The achievement of the torque is heard and felt, the tripping accuracy is ± 6 %. The torque wrench meets the accuracy requirements of EN ISO 6789, BS EN 26789, ASME B107.14M. Due to the **slim** technology, low-lying fastening/spring elements are easily reached.



## VDE interchangeable blade set slimSelection

**Design:** Insulated to 1000 V AC and 1500 V DC, according to IEC 60900 : 2004. ClickFix quick-change holder for 6 mm slimBits. Torque continuously adjusted. For safe screwing of electrical components according to manufacturer's specifications. Effortless access to low-lying screw terminals. Supplied in a case.

## Torque screwdriver No. 756

Certificate

GEDORE

**Design:** With ergonomic and anti-slip rubber handle. Simple and exact value setting with the micrometre scale ring. The set values are automatically fixed by the adjustment guard "Positiv-Lock" . With precision circulation ball coupling for controlled **right and left tightening.** When the set value is reached, the **slip mechanism is triggered automatically and clearly noticeable**. Suitable for use with 1/4" bits, or with adapter pieces for 1/4" sockets.

**Application:** In the fields of electrical and electronics industry, equipment construction industry. For the application in electro-statically sensitive tasks (EPA-compliant). Quick and controlled screw tightening enables application in series production and quality control.

**Scope of delivery:** Torque screwdriver with test certificate according to DIN EN ISO 6789, 1/4" adapter drive piece and operating instructions.

**6230 0035 + 6230 0040**

* Supplied with socket extension tubes.

## Socket extension tube NEW

**Application:** Facilitates the achievement of high torque due to lever extension.

**Note:** For suitable torque wrench see (Order No. 6234).

**6236 0100–0110** Made from aluminium, with anodised clamping nut.

6236 0100–0110

**6236 0115** Made of galvanised steel.

6236 0115

| Order No. | Length mm | 6236 GEDORE |
|---|---|---|
| 0100 | 350 | 57.90 |
| 0105 | 700 | 65.10 |
| 0110 | 762 | 83.90 |
| 0115 | 925 | 63.40 (W522) |

## Plug-in ratchet

**Design:** Made of chrome-vanadium steel, very robust and finely continuous. **Clockwise.**

**Application:** In connection with torque wrenches for controlled tightening of screws.

**Note:** For suitable torque wrench see (Order No. 6232 and Order No. 6234).
Attachable ratchets for counterclockwise operation upon request.

| Order No. | Square drive inch | 6236 GEDORE | Height mm | Ø mm | Pivoting angle |

## Torque wrench

**Design:** Utmost precision also in constant use. Adjustable torque wrench with square drive and **integrated ratchet function** for controlled **clockwise and counterclockwise tightening.** Robust steel pipe construction, powder coated, with galvanised ratchet. **Articulated mechanism with a slide roller guarantees acoustic and tactile trigger signal.** Light and comfortable scale setting by turning the handle and locking on push knob, extremely high accuracy due to micrometer scale ring.
Delivery includes test certificate according to DIN EN ISO 6789.

Certificate

**Application:** For controlled screw tightening in the corresponding torque range for all industrial manufacturing areas.

**6238 0100–0120** **With mushroom head.** Supplied in plastic box.

**6238 0100–0120**

**6238 0125 + 0130** **With square push-through.** Delivered in box.

HAZET

**Design:** Torque and angle wrench have highest precision. 2-component handle made of fibreglass reinforced, impact resistant plastic and soft gripping elements. 3 time signaling the tightening curve by means of **acoustic signal (buzzer), vibration** and all around, from any location, visible **360° LED display** with "traffic light" function. Large, easily readable display, turns 180° Measured value display in 13 mm font size, including pass/fail Screw-driving application rating Simple, clearly structured menu, in readable plain text in font size 5 mm in German and English. Menu-lock function prevents unauthorized adjustment of settings with self-selectable four-digit code. Memory and battery indicator. Safety on and off function (pressing 2 buttons) as well as automatic, time-dependent and energy-saving stand-by function. The effective length is adjustable/programmable for other plug-in tools. Delivery includes manual, 4 AA batteries (AA/LR06, 1.5 V) and test certificate DIN EN ISO 6789.

**Application:** For controlled screw tightening in the corresponding torque range for all industrial manufacturing areas.

**6269** **Protection class IP 40.** Simple operation due to fast menu navigation (torque/angle in just 2 clicks), reduced menu structure due to solid default entries, such as tolerance, N•m unit. Simple, clearly structured menu, with pictograms. Rotation angle range (adding) 5 ° to 995 °. Delivery in HEXA-Pack including reversible ratchet insert 1/2" .

6269

**6271** Switchable torque units N·m and lbf·ft. Rotary angle range (adding) to 999°. Delivery in an aluminium frame case with foam insert including plug-in ratchet 1/2" .

Suitable for all wrenches with respective tool receptacle Please observe that different manufacturers use different pitches, which are aligned with there respective wenches. When using different brands of wrenches and plug-in tools, the pitch has to be checked and the setting adjusted, if necessary.

## GEDORE torque multiplier DREMOPLUS ALU

**Benefits:**
- Slim and light design allows comfortable and safe working also in particularly tight spots.
- Repeat accuracy, precise results
- High durability and longevity due to low-backlash planetary gear heads with ceramic PTFE coating
- Casing more than 30% lighter compared to steel casing due to high-performance aluminium
- Each torque multiplier is checked for torque range and equipped with an individual test certificate
- High-quality finish - made in Germany

**Selecting the correct reaction arm:**

**Z-Form**
Cranked shape to support on neighbouring screws, walls, machine parts or other stable resistance. Ideal where space is limited.

**L-Form**
Straight shape with adjustable reaction arm. Ideal for screw joints, provides a larger radius for the support than the Z form. Can also be supported at points that are higher than the screw plane, but this reduces the maximum permissible torque by 20%.

### Torque multiplier DREMOPLUS ALU

**Design:** Housing made of high-performance aluminium, reaction arm forged from chrome-vanadium steel for safe interception of the counter forces. High precision, single-stage planetary gearbox for high durability and exact torque transfer. The guaranteed accuracy is better than ± 3% tolerance. Square drive with bore for receiving power wrench inserts with locking pin and rubber ring.

**Application:** For controlled tightening of screws and loosening fittings with a torque wrench. Ideal for bridge, ship, aircraft, railway as well as machine and plant engineering in industry, refineries, commercial vehicles, automotive engineering and construction sites.

**Scope of delivery:** Torque multiplier with integrated reaction arm, manufacturer's test certificate, adjustment table and sturdy transport case with foam insert.

**Note:** Power screwdriver bits from 📖 6/92.

Certificate

GEDORE

6252 1300

**6252 1300** **Overload protection by means of sun gear.** If the drive is overloaded by excessive forces, the sun gear is damaged and not the entire motor. After replacing the sun gear, the torque multiplier is ready for use again.

**6252 2800 + 2801** **Overload protection by means of shearing square.** If the motor is overloaded by excessive forces, the output square turns off. The motor won't be damaged. After replacing the square drive, the torque multiplier is ready for use again.

6252 2800

| Order No. | Initial torque N•m | 6252 GEDORE | Reaction arm | Transmission ratio | Square drive inch | Square drive inch | Maximum input torque N•m | Weight kg |

## Electronic torque testing device DREMOTEST E

RS232 Certificate

GEDORE

**Design:** Robust construction with integrated torsion transducer (DMS). The tester has 4 holes for attaching. Mounting the test torque wrench occurs by means of square or hexagonal shank. In addition, the devices are equipped with square adapter (see table for sizes). First peak detection (first peak/sticking point detection), accuracy ±1 % tolerance for all readings, ±1 digit. Switches between N·m and lbf·ft. Moreover, the device has an RS232 serial interface. Delivery includes power adapter with Euro plug, operator manual in 3 languages and test certificate.

**Application:** To check or adjust clockwise direction torque wrench. Through simple operation and rugged construction suitable for workshop, industrial and quality assurance.

## Stainless steel tool (Stainless) for rust prevention

What is rust?

If stainless steel parts (e.g. screws) are machined with a normal tool, this tool leaves behind steel particles that firmly adhere to the stainless steel. These steel particles can rust only in combination with oxygen and thus produce unsightly rust on the actually non-rusting stainless steel.

How is rust prevented?

Through the use of tools, which are also made of stainless steel and are used solely for the processing of stainless steel parts. Due to the vacuum ice-hardening, these tools have the necessary hardness and strength, also use without restrictions is possible.

## Stainless slot screwdriver

**Design: Made of stainless steel.** Round blade, tough (54 HRC), with **laser tip** and micro rough surface. This reduces the contact force and prevents the screw head from sliding out. Due to **vacuum ice-hardening** the blade has a hardness requirement comparable to that of conventional tools and is therefore **100% workshop fit and wear-resistant.** With 3-component Kraftform-Plus handle, ergonomic, with integrated soft zones for a better grip and hexagonal anti-roll protection. In addition, the screwdrivers have a head embossing with output symbol and size.

**Application:** Special product for preventing rust in the processing of stainless steel screws.

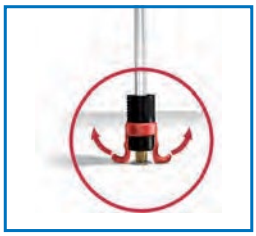
## The screw claw in practice

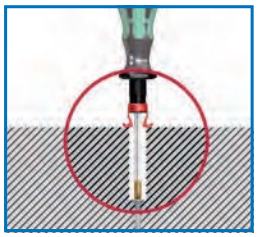
Slide claw screw to the blade until the tip emerges.

Set screw and fix the claw.

Continue pushing claw screw until the slightly spread arms touch the screw head.



The arms are spread apart on surfaces and thus release the screw again.



In deep fittings, the screw claw moves the blade up.

## Scre claw

**Design:** Elastomer-plastic, with free-run sleeve for easy guide of screwdriver. Supplied in SB packaging.

**Application:** For holding screws on screwdrivers, long bits and angle wrenches, round and hexagon blade. The screw claw releases the screw automatically after the screwing process due to special geometry, yet screwing in blind holes is still easily possible.

**6877 0015** **For standard screwdriver.**

**6877 0020** **VDE claw screw set**
**For screwdrivers with insulated blade.**
Set consists of a red and a red/yellow claw screw.

**General notes ESD:** When using tools on components that are vulnerable to electronic discharge (ESD - electrostatic discharge), a controlled removal of electric charges through the handles of such tools is required by the relevant standards and regulations (e.g. IEC TR 61340-5, DIN EN 61340-5, SP Method 2472).

## ESD Electronic screwdriver

**Design:** With round, chromed blade made of high-alloy special steel and Black Point tip for more torque and fit. Has 2 component Kraftform Micro handle with integrated soft areas, roll-off protection and rotating cap for lightning quick twirl. With three mode concept (precision, power and quick turn zone) for ergonomically better handling.

**Application:** Suitable for accurate, efficient and time-saving screwing. Ideal for sensitive adjustments, e.g. in electronic sector and wherever ESD screwdrivers are required.

## Characteristics of bit holders

**Permanent magnet**
Holds the screws and makes it easier to set the screws.

**Circlip**
The tool is held safely and securely in the bit holder.
Particularly robust construction e.g. for assembly lines.

**Ring magnet**
Floating, free-range magnetic sleeve holds long, heavy screws.

**Quick-change chuck**
The bit can be inserted or removed when the sleeve is pushed forward. The bit is pushed back and held safely and securely. In contrast to the lock, through a circlip the bit change here requires no effort and can easily be accomplished even with oily fingers.

**Rapidaptor quick-change chuck**

**Rapid-in** and **self-lock:** The bit can simply be plugged in without moving the sleeve. Locking is automatic when screw is attached.

**Rapid-out:** To remove the bit, sleeve is pushed forward; this lifts the bit which can now be removed easily.

**Rapid-spin:** The freewheeling sleeve allows the guide on the bit holder to provide easy attachment and avoid slipping.

**Chuck-all:** Allows acceptance of 1/4" bits according to both DIN 3126 C 6.3 and DIN 3126 E 6.3.

**Single-hand:** The use of the adapter can be carried out completely with just one hand.

## Universal bit holder 1/4"

**Design: DIN 3126 E 6.3.**

**Application:** To connect bits with the respective operating tools.

## Universal bit holder 1/4"

**Design: DIN 3126 E 6.3.**

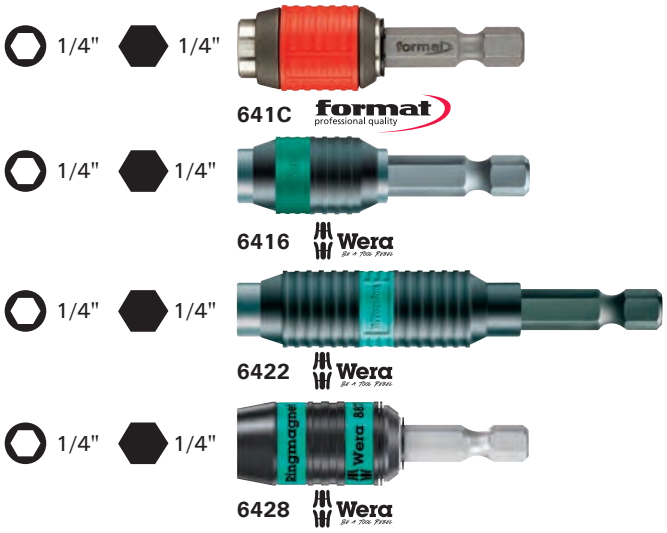
**Application:** To connect bits with the respective operating tools.

**641C** NEW — With strong **permanent magnet** and **quick change chuck.**

**6416** — Rapidaptor with rapid-in and self-lock, rapid-out, rapid-spin, chuck-all and one-hand.

**6422** — **Rapidaptor BiTorsion.** Peak loads are safely cushioned. This extends the life of the bit. With rapid-in and self-lock, rapid-out, rapid-spin, chuck-all and one-hand.

**6428** — **Ring magnet Rapidaptor.** With rapid-in and self-lock, rapid-out, rapid-spin, chuck-all and one-hand.



| Order No. | Bit holder inch | 641C format | 6416 Wera | 6422 Wera | 6428 Wera | Machine mount inch | Length mm 641C | 6416 | 6422 | 6428 |

## Universal bit holder 1/4" Impaktor

**Design:** DIN 3216 E 6.3.
Through the two coupled, sequentially acting torsion areas, even extreme peak loads as they occur in the processing of impact screws are safely cushioned and the service life of bits is increased.

**Application:** Especially well suited for use with impact screwdrivers. To connect bits with the respective operating tools. In connection with Impaktor bits, up to 10 times longer product life compared to standard or torsion bit holder systems.

**6428 0015** — Holder made of stainless steel, with strong **permanent magnet** and **circlip.**

**6428 0020** — With strong **ring magnet** and **circlip.** The magnet can be pushed back and turned off thereby.

| Order No. | Bit holder inch | 6428 Wera Impaktor | 6428 Wera Impaktor | Machine mount inch | Length mm |
|---|---|---|---|---|---|
| 0015 | 1/4 | 15.90 | – | 1/4 | 75 |
| 0020 | 1/4 | – (W545) | 19.20 (W545) | 1/4 | 75 |

## Universal bit holder 1/4" Rapidaptor Stainless

**Design: Made of stainless steel,** DIN 3126 E 6.3.
With rapid-in and self-lock, rapid-out, rapid-spin, chuck-all and one-hand.

**Application:** To connect stainless steel bits with the respective operating tools. Special product for preventing rust in the processing of stainless steel screws.

|---|---|---|---|---|
| 0005 | 1/4 | 23.70 (W545) | SDS-plus | 81 |

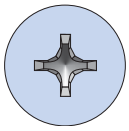
## Phillips or Pozidriv screws? It's the cross-head that matters.

Screws with cross head are indispensable for installation works in trade and industry. They are deployed in various designs. Differentiation is made between the classic Phillips screw (PH) and the subsequently developed Pozidriv screw (PZ).

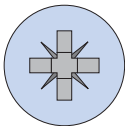
The first glance shows a different design: contrary to the PH screw, the PZ screw is provided with additional star lines from its recessed corners. PZ screw heads also have parallel-running deep flanks, not in conical shape as in case of the PH screw.

The different construction results in different characteristics: while both screw types allow excellent centring, the PZ screw furthermore provides greater side stability due to the parallel flanks. This reduces the risk that the screwdriver slips to the side. Compared to the longitudinal slot screws, screws with a cross slot principally have higher torque.

When using the incorrect screwdriver, you not only loose the advantages of the profile, you also damage the screw and the tool.



**Phillips screw**



**Pozidriv screw**

## Everything for the correct twist: The world of bits.

**As variable as the work of screwdriver applications, as variable is also the selection of bits. To obtain a general idea, here is an overview of the different systems and designs.**

**Extra hard.** Extra hard bits are primarily suited for the soft driving into wood. They prevent premature breaking.

**Tough hard.** Tough hard bits are designed for universal use. They prevent premature breaking.

**Torsion.** This technique cushions torque peaks in the torsion zone of the bit during the screw action. This prevents premature wear and prolongs the life of the tool.

**BiTorsion.** In this bit design, the torsion zone exhibits more than 20% reduced hardness compared to the shaft. This cushions high torque peaks and protects the bit to prolong its life.

**Diamond coated.** Bits with diamond coating live long and allow universal use: their surface particles bite into the screw head and ensure the secure fit of the tool.

**Impaktor.** The bits of the Impaktor series by Wera are designed for the work with impact drivers. They are respectively more robust concerning their geometry and material.
With different torsion zones, they automatically react to torque peaks and adapt to the screw joint. Added to this is a diamond coat for a firm position in the screw head.

INOX **Stainless steel.** If stainless steel screws are used the application of tools made of the same material is recommended: this prevents extraneous rust - i.e. from steel particles of conventional bits. Stainless steel bits are vacuum ice-tempered and comply with workshop requirements.

Hex–Plus **Hex-Plus geometry.** Hex-Plus tools by Wera reduce the risk of recess hexagon screws being "rounded" over time due to sharp edges. This is achieved with a greater contact surface in the screw head. It reduces grooving and wear and allows the transmission of greater torque.

**Holding function** (generally non-magnetic). Screwing tools with mechanical holding functions have three advantages: they provide secure hold in the screw and thus prevent that it is lost during the action. This is added by a better positioning of the applied tool during work. Furthermore, the mechanical holding function also works in case of non-magnetic screws and in areas where magnetism is not wanted.

**"Take it easy" tool finder.** With the "tool finder" system (at the 5 standard drives), Wera facilitates the selection of the suitable tool sizes by way of colours. The tool finder allows the quick allocation also in case of bad lighting conditions and helps in keeping the equipment complete. The ring as well as the print are petrol and oil resistant.

## Countersink bit 90° with 1/4" hexagonal shank

**Design:** HSS, DIN 335-C. 90° countersink angle. Radial taper-ground, bright surface, with straight clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials.
The hexagonal shank (1/4" bit shank according to DIN 2126) causes a 100 % power transfer, thus in every bushing the countersink is extremely slip-free.

**Application:** Suitable for universal chatter and burr-free drilling, countersinking, milling and deburring work. The countersink bit can also be used as hand deburring together with the corresponding activation tools such as grips, toggles or ratchets with a 1/4" hexagon mount.

**Note:** Sufficient supply of coolant is essential.

## Cutting tap 1/4" bit DIN 3126

**Design:** Tap bit, 1/4" hexagon mount for metric ISO thread according to DIN 13.

**Application:** Cutting tap bits are designed for thread tapping with cordless screw drills and handheld drills with left and right motion. However, they are also suitable for tapping by hand and on stationary drilling machines. Your cordless screw drill should have a minimum power of 7.5 Volt. Make sure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil.
rpm: lowest settings (0–450 $min^{-1}$),
torque: maximum setting.

## Combi-bit 1/4" DIN 3126

**Design:** HSS, bright surface. With 1/4" hexagon shaft.

**Application:** For drilling core holes, thread tapping and deburring in one step, for regular metric threads according to ISO DIN 13. Combi-bits are designed for thread tapping with cordless drills and handheld drills with left and right motion. However, they are also suitable for tapping by hand and on stationary drilling machines. Only through-holes with up to a maximum thread depth of 1 x D can be produced. Particularly suitable for assembly work and small batches. Make sure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil (order no. 9829).

## Cutting tap bit

Please check out our complete range of cutting taps from 📖 1/164.

## Combi-bit SGE 1/4" DIN 3126

**Design:** With cross-grinding and 1/4" hexagon shaft.

**Application:** For drilling core holes, thread tapping and deburring in one step. Combi-bits are designed for thread tapping with cordless drills and handheld drills with left and right motion. However, they are also suitable for tapping on stationary drilling machines. Material thickness not more than nominal thread Ø (M6 = 6 mm material thickness). Particularly suitable for assembly work and small batches. Please ensure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil (order no. 9829).

**Note:** The heat-treated induction zone allows for increased bending elasticity, thus significantly reducing the risk of fracture, thereby up to **50% longer life**.

## Bit ratchet cyclops Mini 2

NEW

**Design:** Made from full metal, drop forged, with reversing lever. Ergonomically shaped Kraftform handle. Socket spanner is received directly in the ratchet head 60-fold serrated, rear swivel angle 6°.

**Note:** Suitable for wrench inserts with hexagon (Order no. 6402).

## General information:

An appropriate steel microstructure, essential for uniform hardness. Type and angle of the cut are determined by the particular application, whereby one differentiates between **cut 1 - for rough machining, cut 2 - half smooth/universal** and **cut 3 - finishing.** Ideal tooth geometry for each application. The length of the file is measured without the tang from the tip to the attachment.

## Flat blunt file

**Design: DIN 7261, Form A,** rectangular and hewn on 3 sides.

**Application:** Suitable for processing rectangular geometries and deburring. Can also be used for surface machining.

**6530** With tang

**6533** With ergonomic shaped 2-component plastic handle, roll-off protection and hanging hole.

## Chassis file

**Design:** Chassis file blade with positive filing angle and extraordinary sharp teeth for optimum surface quality. Excellent filing performance is achieved due to the special manufacturing process, which creates knife-like teeth. Due to the domed shape of the blade, the cutting teeth are not on a straight surface, but have in the middle their greatest and sides their least height, so as to avoid scratches on the workpiece.

**Application:** Suitable for working sheet metal of any kind, especially for the automobile and body shop. Applied everywhere where smooth, scratch-free surfaces must be achieved. These can be painted directly. No polishing needed.

6616

| Order No. | Length mm | 6616 PFERD | Toothing | Cross-section mm |

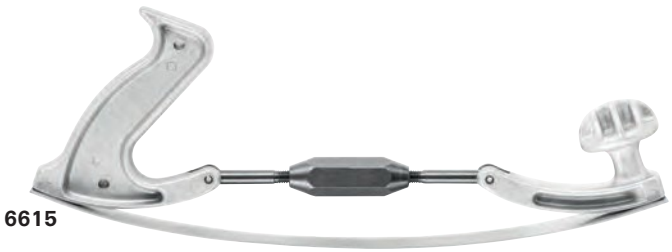
| 0353 | 350 | 45.20 (W549) | 3 | 36 x 5.4 |

## Automobile body file holder

**Design:** Lightweight, strong and ergonomic file holder made of die-cast aluminium, painted silver. Due to the infinitely adjustable clamping device, the chassis file and be bent more or less convex. This allows particular adjustment to various surface shapes.

| Order No. | Suitable for file length mm | 6615 PFERD |
|---|---|---|
| 0001 | 350 | 64.70 (W549) |



6615

**General notes:** PFERD precision files meet the highest standards of dimensional accuracy, cutting performance and tool life. Precision files compared to workshop files are smaller, handier and more precise in their geometry. They are used in fixture and tool machining, especially for producing tools for punching, forming, forging, stamping series of articles, etc. One also needs precision files for installing and constructing complex devices and machines that require the highest precision.

## Initial file, flat blunt

**Design: Form A,** flat blunt, rectangular, with tang and hewn on 3 sides.

**Application:** Suitable for processing rectangular geometries and deburring. Can also be used for precision surface machining.

## Pin file, normal

**Design: Form A,** rectangular, with tang and hewn on 2 sides. Narrower design than flat-blunt initial file.

**Application:** Suitable for processing rectangular geometries, deburring as well as filing perforations. Can also be used for precision surface machining.

| Order No. | Length mm | 6623 PFERD | Swiss stroke | Cross-section mm |

| | | (W549) | | |

## Precision needle file

**Design:** High quality design in common shape and dimension, each in coarse to fine cut variation. Accurate grade with high filing performance and idle time. Available in lengths of 160 mm and 200 mm. Cut length = half the file length, i.e., total length 160 mm, the carved length about 80 mm. Shaft/tang diameter 3.25 mm for total length 160 mm and 3.75 mm for total length 200 mm.

**Application:** For the finest and most precise work in machine and tool making.

PFERD

**6650 0160–0262** **Form A, flat blunt,** rectangular and hewn on 4 sides.

**6650 1160–1202** **Form E, half round** and tapering tip as well as hewn on 2 sides.

**6650 2160–2202** **Form C, triangular** and tapered tip as well as hewn on 3 sides.

**6650 3160–3202** **Form D, square** and tapering tip as well as hewn on 4 sides.

**6650 4160–4202** **Form F, round** and tapering tip as well as hewn all around.

**6650 5161 + 5162** **Form A, flat tip,** rectangular and tapering as well as hewn on 4 sides.

**6650 6160–6162** **Bird tongue, half round** as well as tapering tip and hewn on 2 sides. With two-sided radius.

**6650 7160–7162** **Barrette, leg asymmetric,** triangular and tapering tip as well as hewn on 1 side.

**6650 8160–8162** **Form G, knife profile,** triangular and tapering tip as well as hewn on 2 sides.

HAZET

6/233

## Thread repair

Thread roll tools from Hazet permit the repair of threads without removing material and thus retain the fit of the screw components.

**General notes:** Due to the abrasive coating, high grip, material removal rate and profile/edge stability are achieved under light pressure. Diamond files are also suitable for very hard surfaces, plastics, hardened steel, hard metals, glass, ceramics, non-ferrous metals, super nickel alloys, armouring and ferrite.

STOP **Higher pressure does not achieve a better file outcome, but damages the file.**

## Diamond needle file

**Design:** Galvanic bound in hard-chrome-plated precision design. Total length 140 mm, diamond facing length 70 mm, shaft ∅ 3 mm. Original Swiss basic body made of ground and forged special file steel. Universal granulation size D 126 medium (according to the FEPA standard).

**Application:** For precise (re) processing workpieces/tools (e.g., punching, cutting and pressing tools) in machine and mould. In addition, for deburring and processing of GFK and related materials, of HM and ceramics prior to and after sintering, graphite, ferrite, cast HSS etc.

**Flat blunt**

**Flat blunt, round edges**

| 0030 | 115 | 2.36 (W548) | 300–350 | Profiles: Triangular, square, round, special shapes |

## Quick mounting handle for needle, key and diamond files

**Design:** Handy file handle made of plastic with clamping jaws.

**Application:** For the quick clamping of needle, key and diamond needle files as well as smaller workshop and precision files.

| Order No. | Length mm | 6681 PFERD | For file length mm |
|---|---|---|---|
| 0002 | 90 | 4.68 (W549) | 140–200 |

## Needle file holder

**Design:** Handy file handle made of plastic with spring collet chuck and turret for adjusting the tension.

**Application:** For safe guidance and quick clamping of needle files.

| Order No. | Length mm | 6681 PFERD | For tang ∅ mm |
|---|---|---|---|
| 0100 | 100 | 22.10 (W549) | 3–5 |

## Triangular wood scraper

**Design: DIN 8350 C.** Made of special chrome steel with triangular hollow profile blade, concave sharpening and clean enamelled surface. Highest cutting performance due to high blade hardness of 58-65 HRC on 1/3 of the blade length. With moulded wooden handle in curved shape, lacquered and with pressed, seamless steel pipe clamp.

| Order No. | Blade length mm | 6690 format | Blade width mm |

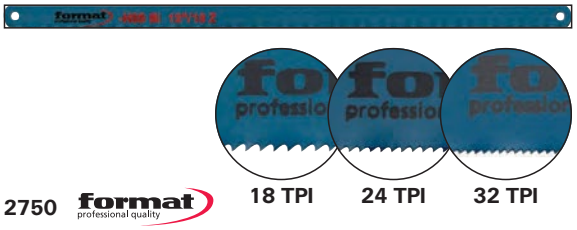
| 0020 | 300 | 2.18 (W250) | 25 | 0.70 | 24 |

## Hand saw blade, HSS/bimetal

**Design:** Practically unbreakable and splinter-proof bimetal blade with precision-ground teeth for all types of metal cutting. Blade backs made of durable yet flexible spring steel and teeth edge of high-alloy super HSS steel. This blade guarantees a significantly longer operating life and longer tooth sharpness than conventional hand saw blades. The Sandflex® hand saw blade unites extremely high cutting performances and resistance with high flexibility.

**Application:** These blades combine high performance with safety against breakage and are universally applicable.

HSS Bimetal



2750 format professional quality

## Pin punch with guide sleeve

**Design:** Made of chrome-vanadium steel, zinc chromed. Knurled, slim shaft with toughened drift pin, hardened and coded, lose guide sleeve (at Ø 5.9 mm with solid guide sleeve).

**Application:** The drift tip is inserted by pushing guide sleeve forward. During work, the drift pin is supported by the movable sleeve; this extensively prevents the drift pin from breaking.

## Pin punch set with guide sleeve

**6869 0005** Supplied in plastic stands.

**6869 0010** Supplied in plastic bag.

| Order No. | Design | 6869 format | Set contents mm |
|---|---|---|---|
| 0005 | 8-part | 26.00 | 0.9; 1.4; 1.8; 2.4; 2.8; 3.4; 3.9; 5.9 |
| 0010 | 8-part | 24.10 (W552) | 0.9; 1.4; 1.8; 2.4; 2.8; 3.4; 3.9; 5.9 |

6869 0010

## Centre punch

**Design:** Made of octagonal chromium-molybdenum-vanadium air-hardened steel. With tempered striking head, therefore bulge formations, beading and chipping are almost excluded.

**6874** DIN 7250, extra slim, conical spike shape Surface enamelled.

**6876** With soldered carbide tip, chromed surface.

| Order No. | Length mm | 6874 format | 6876 format | Material thickness mm |

## Fitter's hammers

With classic hickory handle or unbreakable 3-component handle. Our complete range of mechanic's hammers are found from 📖 6/195.

📖 6/195

📖 6/195

## Special characteristics of KUKKO tools

AUTOGRIP TECHNOLOGY — Automatic self-tensioning and self-centring of the extractor hooks.

Glide&FIX TECHNOLOGY — Optimised geometry of traverse and sliders for particularly easy movement of the puller legs. At the same time, ensures a firm grip when tightening the screws.

ARMLOCK TECHNOLOGY — Novel cross hook ensures maximum stability of the suspension in slider and hooks. Changes are easy, because only one screw is necessary.

Quick adjust® TECHNOLOGY — Quick loosening and displacing the puller legs by means of hand adjusting knurl.

hydraulic TECHNOLOGY — Tools with hydraulic function.

Pullback® TECHNOLOGY — Its easy to turn back the nut splitter chisel from deformed or demolished nuts. The chisel does not get caught in the nut.

## Small part puller, two-armed

**Design: Two-armed, with T-handle. With heavy-duty, power-transmission, self-centring, slim puller legs** made of chrome alloy tool steel. **With automatic adjustment handle,** freely rotating centring tip and tempered, specially coated pressure spindle with particularly good sliding properties. Handy, space-saving model.

**Application:** Particularly suitable for small electro motors, battery clamps, small ball bearings etc. for MV electric, electrical workshops, compressed air maintenance and similar applications.

AUTOGRIP TECHNOLOGY

| Order No. | Model | 6901 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0060 | 43-1 | 28.00 | 60 | 50 |
| 0070 | 43-2 | 28.80 | 70 | 70 |
| 0080 | 43-3 | 29.50 (W562) | 80 | 80 |

## Puller, two-armed

**Design: Two-armed. With heavy-duty, power-transmission, self-centring puller legs** made of chrome alloy tool steel. **With automatic adjustment handle,** freely rotating centring tip and tempered, specially coated pressure spindle with particularly good sliding properties. Powerful model.

**Application:** Especially for pulling very tight-sitting gears, sprockets, ball bearings, belt machines etc.

AUTOGRIP TECHNOLOGY

| Order No. | Model | 6902 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0100 | 44-1 | 33.20 | 100 | 100 |
| 0120 | 44-2 | 52.40 | 120 | 120 |
| 0160 | 44-3 | 80.90 | 160 | 160 |
| 0250 | 44-4 | 112.00 | 250 | 200 |
| 0300 | 44-5 | 147.50 (W562) | 300 | 250 |

## Puller, two-armed

**Design: Two-armed. With heavy-duty, self-centring, swivelling puller legs** made of chrome alloy tool steel. **Has automatic adjustment handle** and tempered, specially coated pressure spindle with particularly good sliding properties. Robust universal model

**41-0** Particularly sturdy model with hexagon spindle
**41-1** Small, handy model with T-handle
**41-2** Small, handy model with T-handle
**41-3** Strong model, spindle with hexagon intake
**41-4** Strong model, spindle with hexagon intake
**41-5** Strong model, spindle with hexagon intake

**Application:** Particularly for the stripping of pulleys, gear wheels, ball bearings etc. for stripping in difficult to access locations. Can also be used in conjunction with separating devices.

6903 0060

6903 0080

| Order No. | Model | 6903 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|

| | | (W562) | | |

## Universal puller, two-armed, with quick adjustment

**Design: Two-armed, with quick adjustment. With sliding, always parallel, self-centring and switchable puller legs** made of chrome alloy tool steel. **Has automatic adjustment handle,** freely rotating centring tip and tempered, specially coated pressure spindle with particularly good sliding properties. Powerful model.

**Application:** With switchable puller legs, also suitable as external and recessed extractor. For quickly loosening and displacing the puller legs without wrench.

| Order No. | Model | 6906 | Jaw span mm | Clamping depth mm |

| | | (W562) | | |

## Autogrip puller, two armed

**Design: Two-armed,** drop-forged. **With automatic self-tensioning, self-locking, power-transmission and self-centring puller hooks** made of oil-hardened chrome-vanadium steel. **Has automatic adjustment handle** and tempered, specially coated pressure spindle with particularly good sliding properties. Comfortable model.

**Application:** Suitable for pulling in hard to reach places due to the elastic effect and the slim design.

| Order No. | Model | 6907 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0150 | 482-3 | 78.70 (W562) | 150 | 150 |

## Puller with claw feet

**Design: Two-armed. With self-tensioning, pointed claw feet** made of chrome alloy tool steel, which by means of **scissor-like hook behaviour** press inextricably on the part to be removed. **With extremely wide span range** and the span depth, which can be individually selected due to the self-locking pins. Has freely rotating centring tip and tempered, specially coated pressure spindle with particularly good sliding properties.

**Application:** To strip cracks, bearings and similar part at difficult to reach locations.

| Order No. | Model | 6908 | Jaw span mm | Clamping depth mm | Dimension A mm | Dimension B mm | Dimension C mm | Dimension D mm |
|---|---|---|---|---|---|---|---|---|
| 0100 | 14-01 | 92.70 | 6–100 | 85 | 11 | 9.5 | 3.5 | 2.5 |
| 0140 | 14-03 | 138.50 | 15–140 | 160 | 12 | 11.0 | 3.5 | 3.9 |
| 1100 | 14-1 | 80.90 | 6–100 | 85 | 21 | 9.5 | 3.5 | 2.5 |

6909 0050

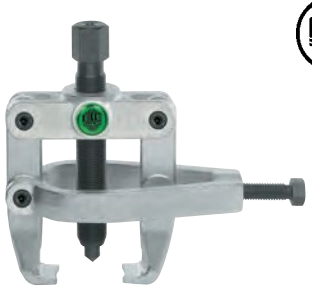
6909 0090

## Pitman arm puller

**Design: Pitman arm puller. With lateral clamp and puller legs** made of chrome alloy tool steel. Has freely rotating centring tip and tempered, specially coated pressure spindle with particularly good sliding properties.

**Application:** Suited to pull flash pitman arms, ball bearings, gear wheels, pinions and similar parts.

| Order No. | Model | 6910 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0080 | 204-1 | 80.90 | 80 | 90 |
| 0100 | 204-2 | 92.70 | 90 | 100 |
| 0150 | 204-3 | 150.50 (W562) | 150 | 140 |



## Flywheel puller

**Design: Flywheel puller** made of special steel. With swivelling hooks. The greater the necessary pulling force, the strong the grip of the pulling hocks on the part to be stripped. Particularly strong hooks, which **grip through the two or three gaps** and grab the belt of the ventilator.

**Application:** To pull off flywheels.

**6892** Two-armed.

**6893** Three-armed.

| Order No. | Model | 6892 | 6893 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|---|
| 0200 | 201-S | 65.70 | – | 200 | 200 |

6892

6893

## Hydraulic puller, three-armed

**Design: Hydraulic puller** made of special steel, robust design. With hydraulic spindle, thus suitable to release particularly stubborn parts. The greater the necessary pulling force, the strong the grip of the pulling hocks on the part to be stripped.

**Application:** Suitable for the stripping of pulleys, gear wheels, ball bearings etc.

| Order No. | Model | 6894 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0400 | 206-2-B | 397.00 (W562) | 400 | 400 |

## Separator puller

**Design: Separator puller. With lateral pressure piece and puller legs** made of chrome alloy tool steel **with conical cutting on one side and normal cutting on the other side.** Has freely rotating centring tip and specially coated pressure spindle with particularly good sliding properties.

**Application:** Suitable for use in hard to reach places due to the space-saving form. Due to conic blade, this puller is suited to pull flash axis bearings, ball bearing rings, pinions etc.

| Order No. | Model | 6911 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0090 | 210-1 | 136.00 | 95 | 170 |
| 0135 | 210-2 | 169.00 | 135 | 270 |
| 0150 | 210-3 | 194.00 | 150 | 325 |
| | | (W562) | | |

## Puller, three armed

AUTOGRIP TECHNOLOGY

**Design: Three-arm. With heavy-duty, power-transmission, self-centring puller legs** made of chrome alloy tool steel. **With automatic adjustment handle,** freely rotating centring tip and tempered, specially coated pressure spindle with particularly good sliding properties. Powerful model.

**Application:** Especially for pulling very tight-sitting gears, sprockets, ball bearings, belt machines etc.

| Order No. | Model | 6912 | Jaw span mm | Clamping depth mm |

| 0180 | 42-5 | 113.50 | 180 | 200 |
| | | (W562) | | |

* With T-handle.

## Universal puller, three armed

Glide&FIX TECHNOLOGY

ARMLOCK TECHNOLOGY

**Design: Three-arm. With self-centring, sliding, always parallel and switchable puller legs** made of chrome alloy tool steel. **Has automatic adjustment handle** and tempered, specially coated pressure spindle with particularly good sliding properties. Robust, strong model.

**Application:** With switchable puller legs, also suitable as external and recessed extractor.

| Order No. | Model | 6915 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0090 | 30-1 | 78.50 | 90 | 100 |

## Universal puller, three armed

**Design: Three-armed, with strong traverse. Has self-centring, sliding, always parallel and switchable puller legs** made of chrome alloy tool steel. **Has automatic adjustment handle** and tempered as well as powerful, specially coated pressure spindle with particularly good sliding properties. Robust, extra strong model.

**Application:** With switchable puller legs, also suitable as external and recessed extractor.

| Order No. | Model | 6916 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0375 | 11-0-A | 573.50 | 375 | 200 |

## Autogrip puller, three armed

**Design: Three-arm. With automatic self-tensioning, self-locking, power-transmission and self-centring puller hooks** made of-chrome alloy tool steel. **Has automatic adjustment handle** and tempered, specially coated pressure spindle with particularly good sliding properties. Comfortable model.

**Application:** Suitable for pulling in hard to reach places due to the elastic effect and the slim design.

| Order No. | Model | 6918 | Jaw span mm | Clamping depth mm |
|---|---|---|---|---|
| 0150 | 483-3 | 93.20 (W562) | 150 | 150 |

## Universal two- and three-armed puller set

**Design:** Made of special steel. Slim, S-hooks remain parallel also under full load, slides continuously on the cross beam. Traverse with six edge profile to counter with wrench. Spindle head with collar to prevent slipping of key.

**20-10-SP two-arms,** ideal to save space when working.
**30-10-SP three-arms,** even load distribution, thus particularly safe hold.

**Application:** By inverting the puller legs, also suitable as **external and recessed extractor.** Ideal to pull of gear wheels, bearings, pinions and synchronous bodies **at several clamping depths.** Also suitable for **pulling asymmetrical tools.**

Small puller legs
