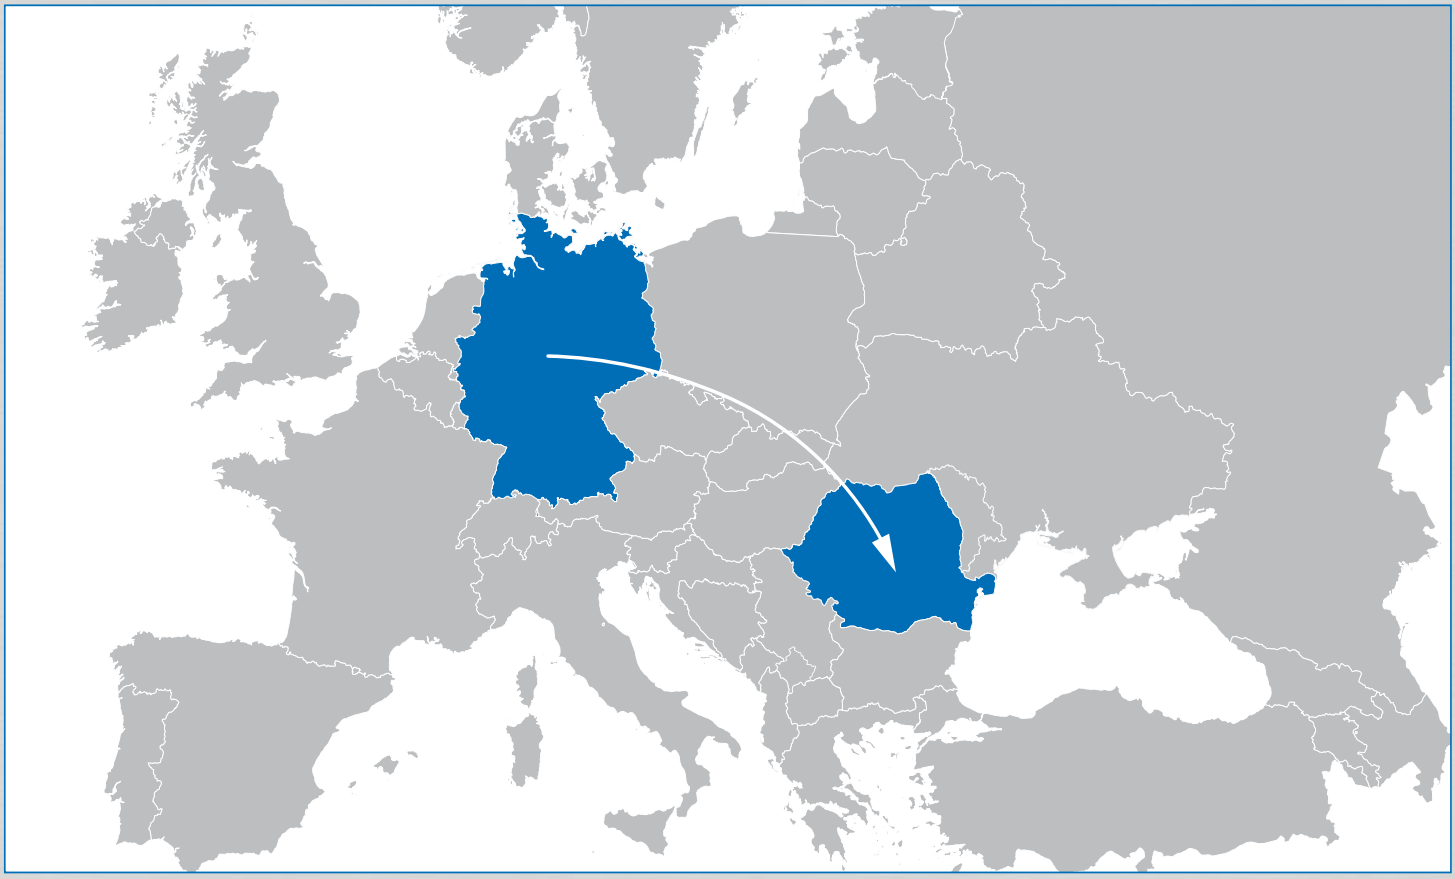
# Un parteneriat de succes

ROCAST vă oferă în România direct din depozitul central din Germania peste 35.000 de unelte și scule de cea mai înaltă calitate la prețuri competitive.

ROCAST vă asigură livrări rapide la prețuri rezonabile:

livrare în 24 de ore - cost livrare 20€
livrare în 72 de ore - cost livrare 15€
livrare în 10 zile - gratuit



Prețurile din catalog sunt exprimate în Euro, nu conțin TVA și se facturează la cursul BNR din ziua respectivă.

## STRONG PARTNER
## IMPRESSIVE CHOICE

Quality, experience and service. An unbeatable combination. As always. See for yourself: on the following pages you will find top quality products for industry and trade. And that's what makes FORMATplus stand out.

Our strength is your advantage.
And we are:

**1 CUSTOMER-DRIVEN**
Take advantage of our years of experience.

**2 REASONABLY PRICED**
We calculate the best price for you. Always.

**3 GUARANTEED**
We guarantee the quality of our tools. Every day.

**4 EFFICIENT**
48 to 72 hour delivery service depending on cost and location.

**5 EXCLUSIVE**
Only from us: FORMAT tools of the highest quality. That's a promise.

**6 VERSATILE**
Peace of mind: More than 36,000 items permanently in stock.

**7 COMPETENT**
Do you need advice on managing your materials? We can help. Every time.

**8 FLEXIBLE**
Special tools needed?
We're happy to get them for you.

# NATIONWIDE **COMPETENCE**

## PREMIUM TRADE TOOLS
ALWAYS CLOSE BY

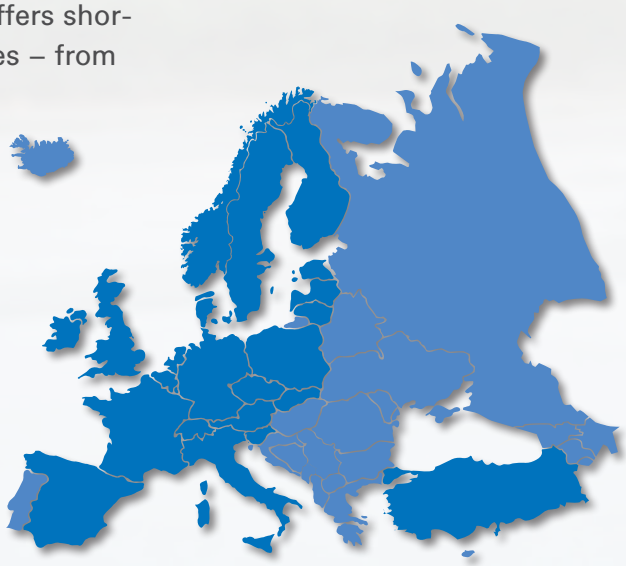
No boundaries: United Kingdom and across Europe, we have been known for many years as a system supplier and tool specialists. We keep moving and share our success with our Partners. In industry, trade, and in various institutions our customers have a wide range of benefits that only a strong and broad-based coalition of leading dealers can offer; long-term.

Your benefits:

- **Fair prices**
- **Highest delivery standards**
- **Perfect service**
- **Proper warehousing**

Proximity to our customers is how we work: our Electronic Logistics Centre (ELC) offers shorter therefore faster routes – from ordering to delivery of goods.

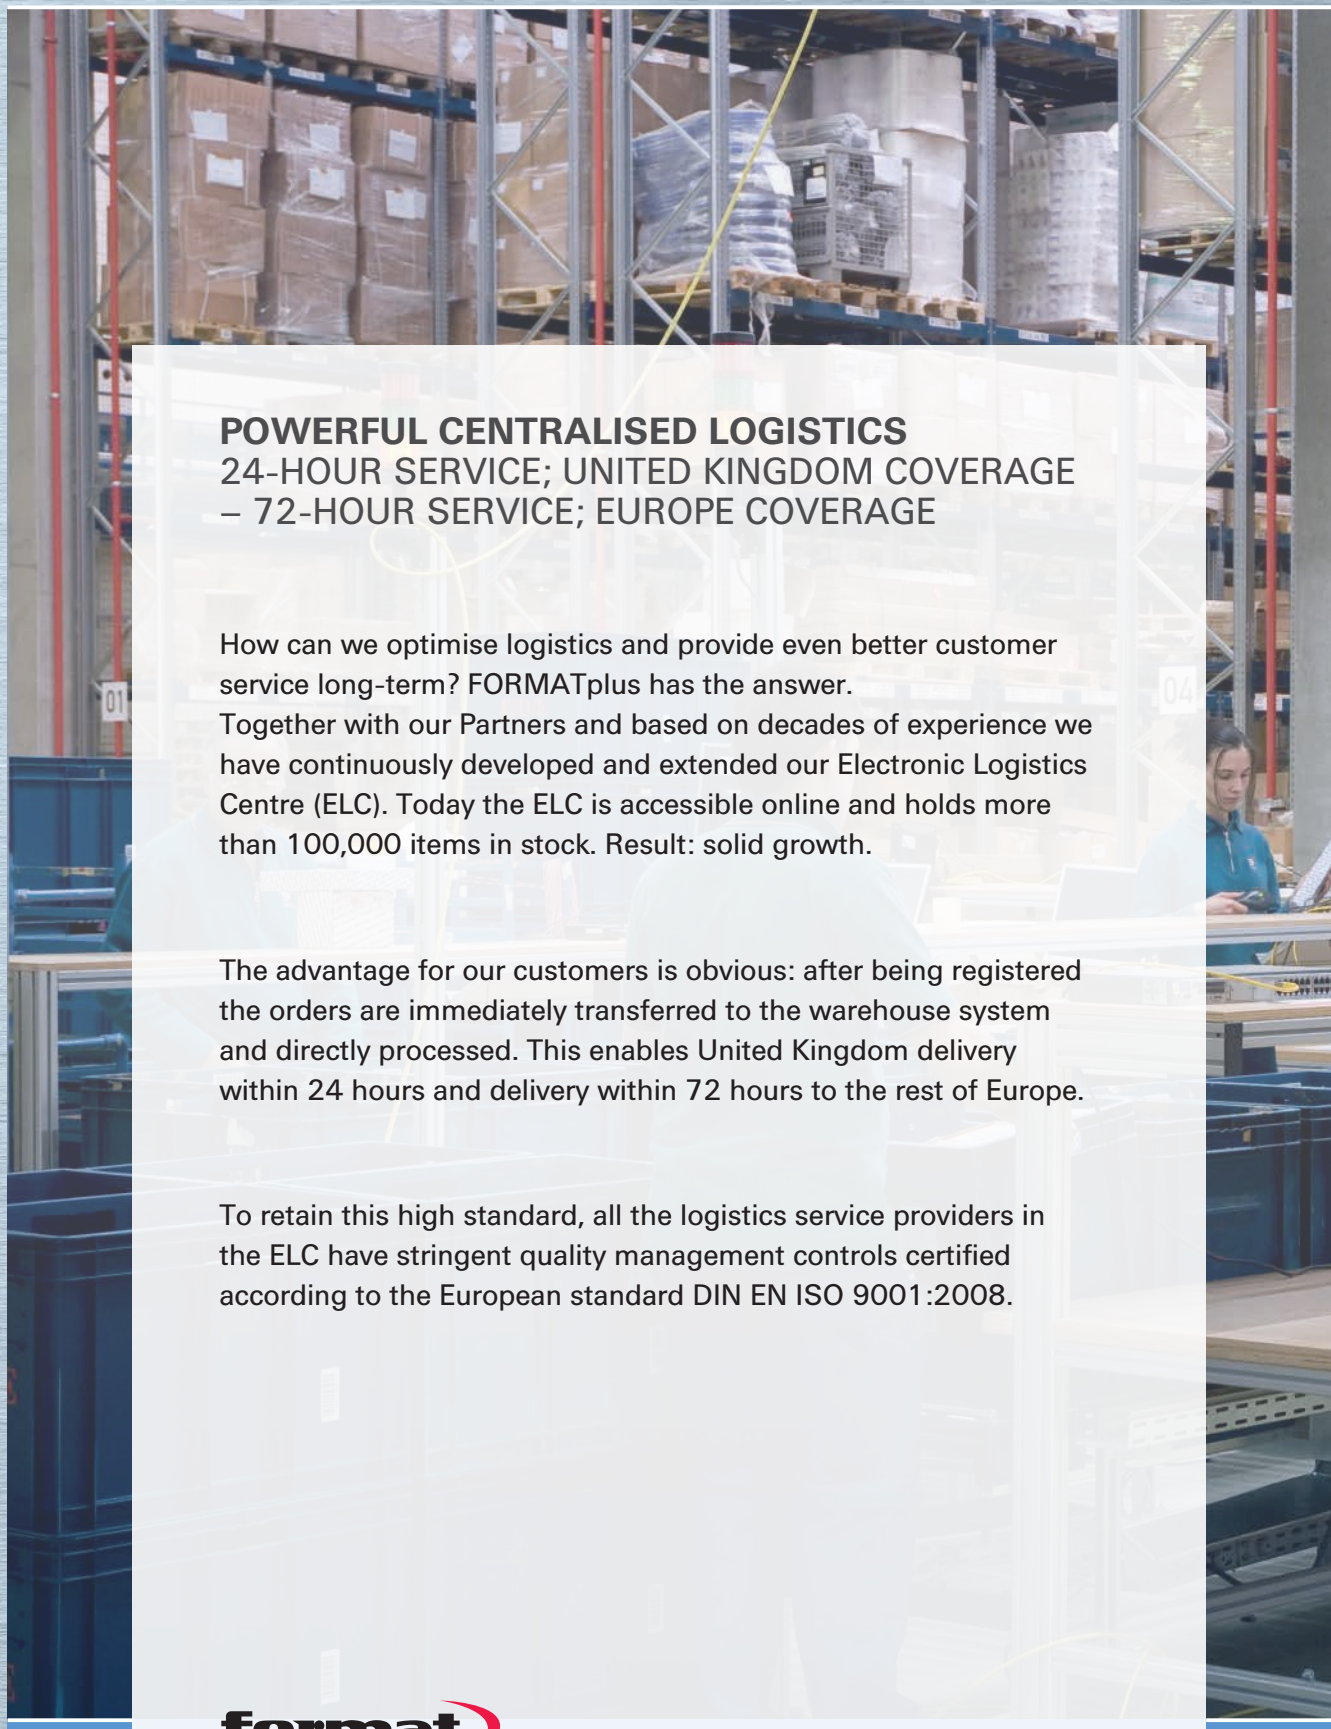
You save time.
You save money.



format professional quality plus

By your side
throughout
Europe.

# SERVICE **BY THE SHORTEST ROUTE**



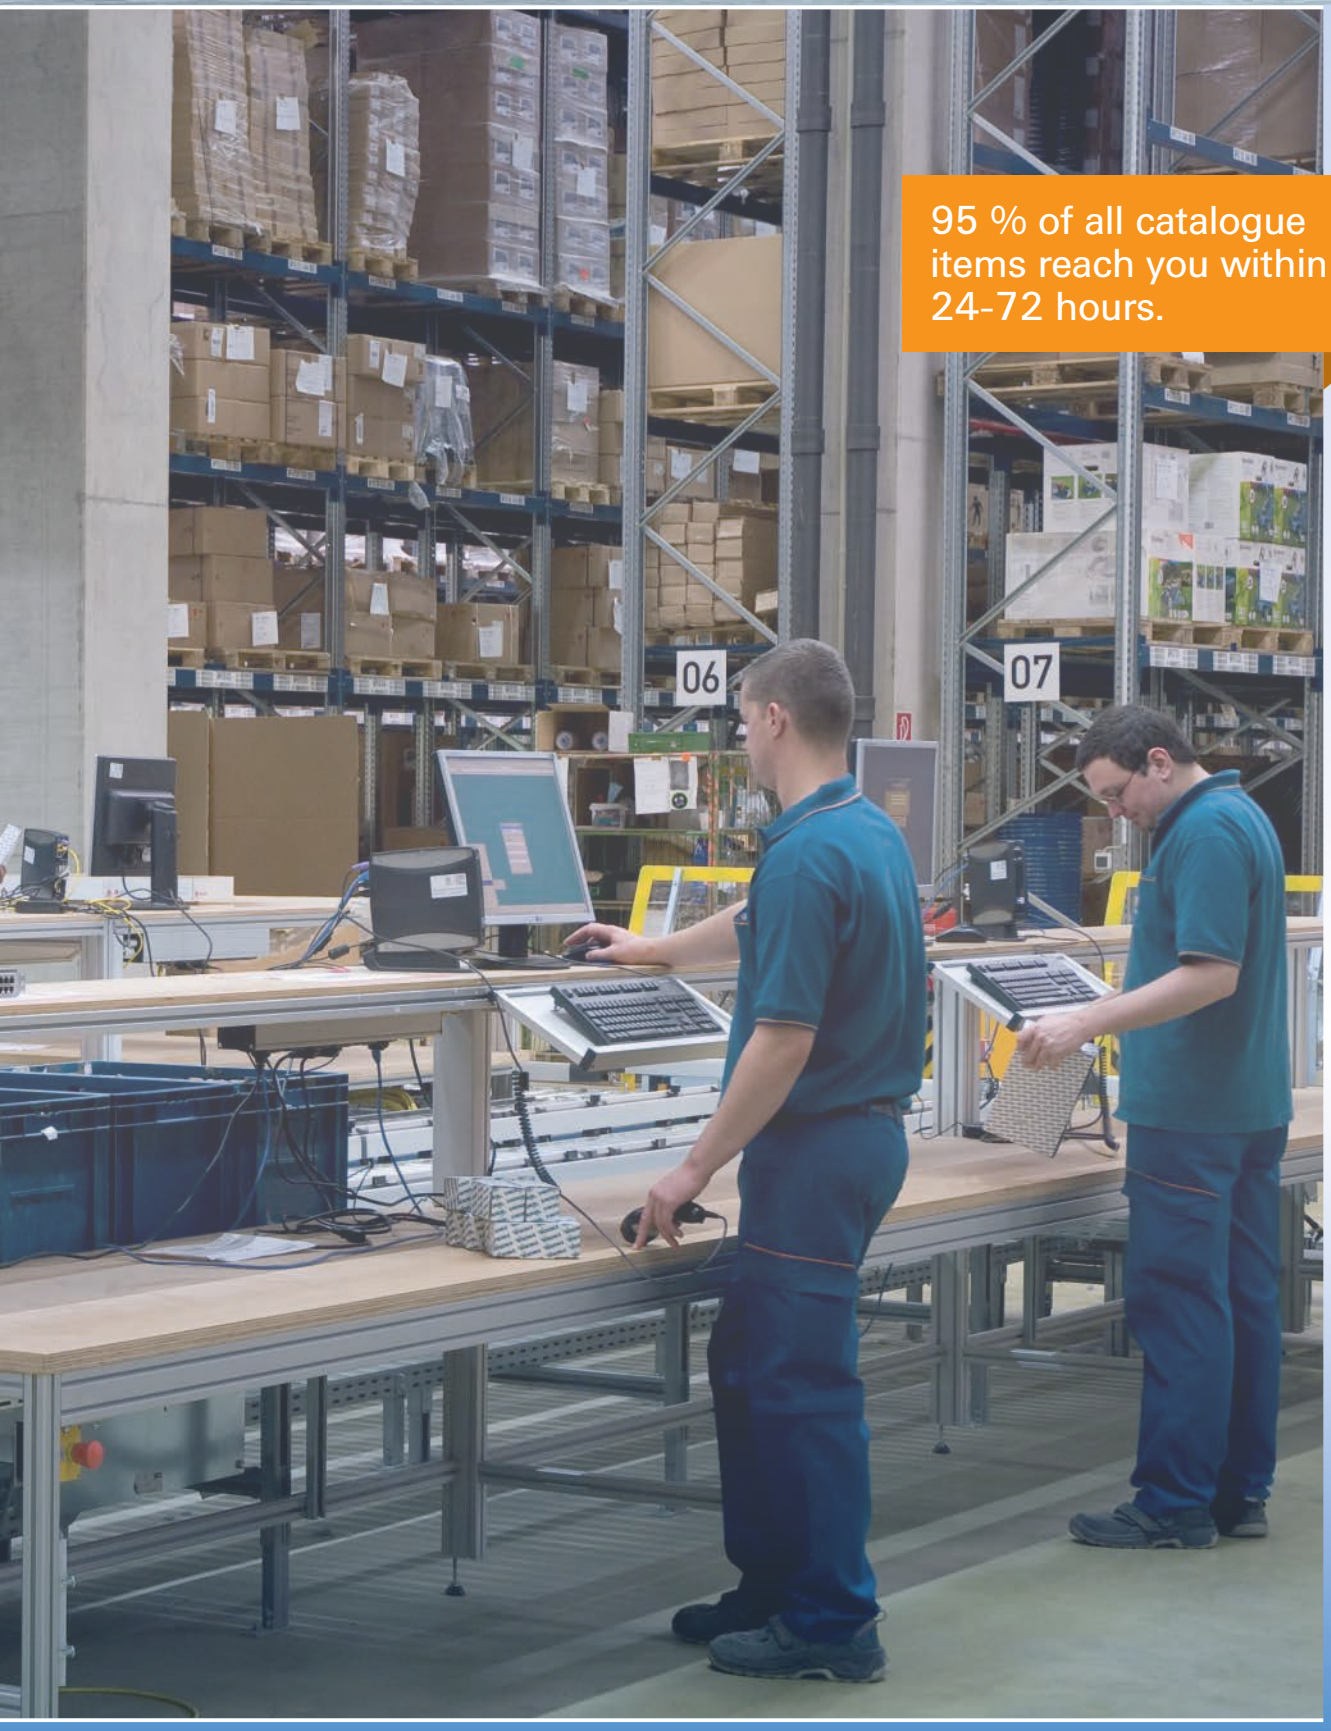
## POWERFUL CENTRALISED LOGISTICS
24-HOUR SERVICE; UNITED KINGDOM COVERAGE – 72-HOUR SERVICE; EUROPE COVERAGE

How can we optimise logistics and provide even better customer service long-term? FORMATplus has the answer.
Together with our Partners and based on decades of experience we have continuously developed and extended our Electronic Logistics Centre (ELC). Today the ELC is accessible online and holds more than 100,000 items in stock. Result: solid growth.

The advantage for our customers is obvious: after being registered the orders are immediately transferred to the warehouse system and directly processed. This enables United Kingdom delivery within 24 hours and delivery within 72 hours to the rest of Europe.

To retain this high standard, all the logistics service providers in the ELC have stringent quality management controls certified according to the European standard DIN EN ISO 9001:2008.

format professional quality plus



95 % of all catalogue items reach you within 24-72 hours.

# AN ALTERNATIVE WITH **FORMAT**

## QUALITY THROUGHOUT THE RANGE
THE CHOICE SPEAKS FOR ITSELF

The wishes, expectations and requirements of our customers are our top priority: As a Partner of FORMATplus we therefore rely on a two brand strategy.

On the one hand our range offers the branded tools of a leading international manufacturer: every professional knows them. They have been proven through daily use and are the first choice in many companies.

On the other hand in FORMAT we have the economical, high-quality alternative to the branded products: our trade name brand is made by leading manufacturers according to our strict guidelines.

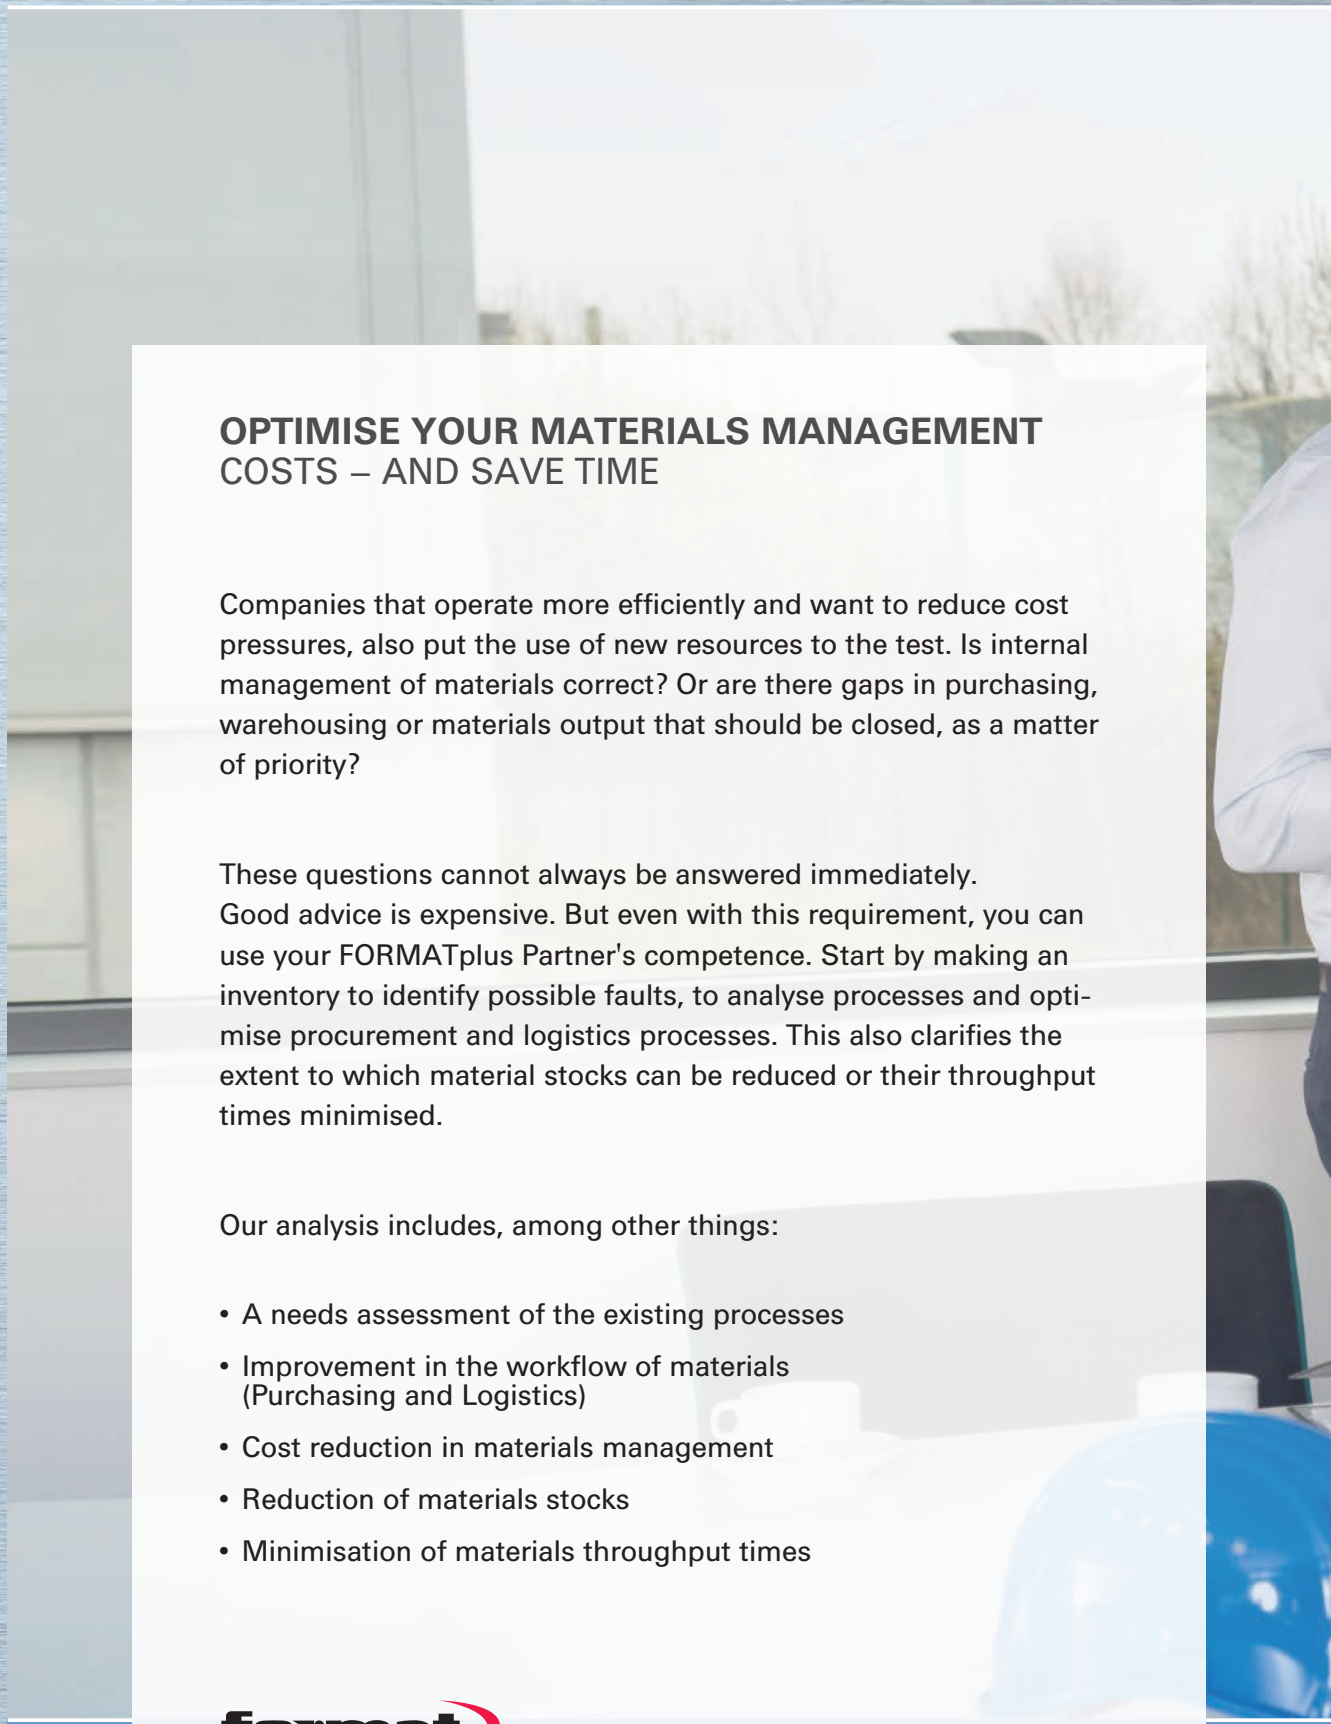
Thus for more than 25 years FORMAT has stood for quality, which is indispensable in industry and trade today and is underlined time and again by its continued growth.

You have the choice.

format professional quality plus

Tried and tested
quality and innovation
for your company.

# PROCESSES **PERFECTED**



## OPTIMISE YOUR MATERIALS MANAGEMENT
COSTS – AND SAVE TIME

Companies that operate more efficiently and want to reduce cost pressures, also put the use of new resources to the test. Is internal management of materials correct? Or are there gaps in purchasing, warehousing or materials output that should be closed, as a matter of priority?

These questions cannot always be answered immediately.
Good advice is expensive. But even with this requirement, you can use your FORMATplus Partner's competence. Start by making an inventory to identify possible faults, to analyse processes and optimise procurement and logistics processes. This also clarifies the extent to which material stocks can be reduced or their throughput times minimised.

Our analysis includes, among other things:

- A needs assessment of the existing processes
- Improvement in the workflow of materials (Purchasing and Logistics)
- Cost reduction in materials management
- Reduction of materials stocks
- Minimisation of materials throughput times

format professional quality plus

Together we will
optimise your
running costs.

# INCREASED **EFFICIENCY**

## SYSTEMS FOR OPTIMAL LOGISTICS
PROVEN TECHNOLOGY FOR YOUR BUSINESS

Our "toolbox" is not limited to just transport. If required, we also provide technical systems for efficient materials management:

eproc.III
Die Procurement-Lösung

Electronic procurement solutions specifically for industrial companies

ETT
TOOL TERMINAL

Automatic materials delivery system with computer support

[KANBAN]
LOGISTIKSYSTEM

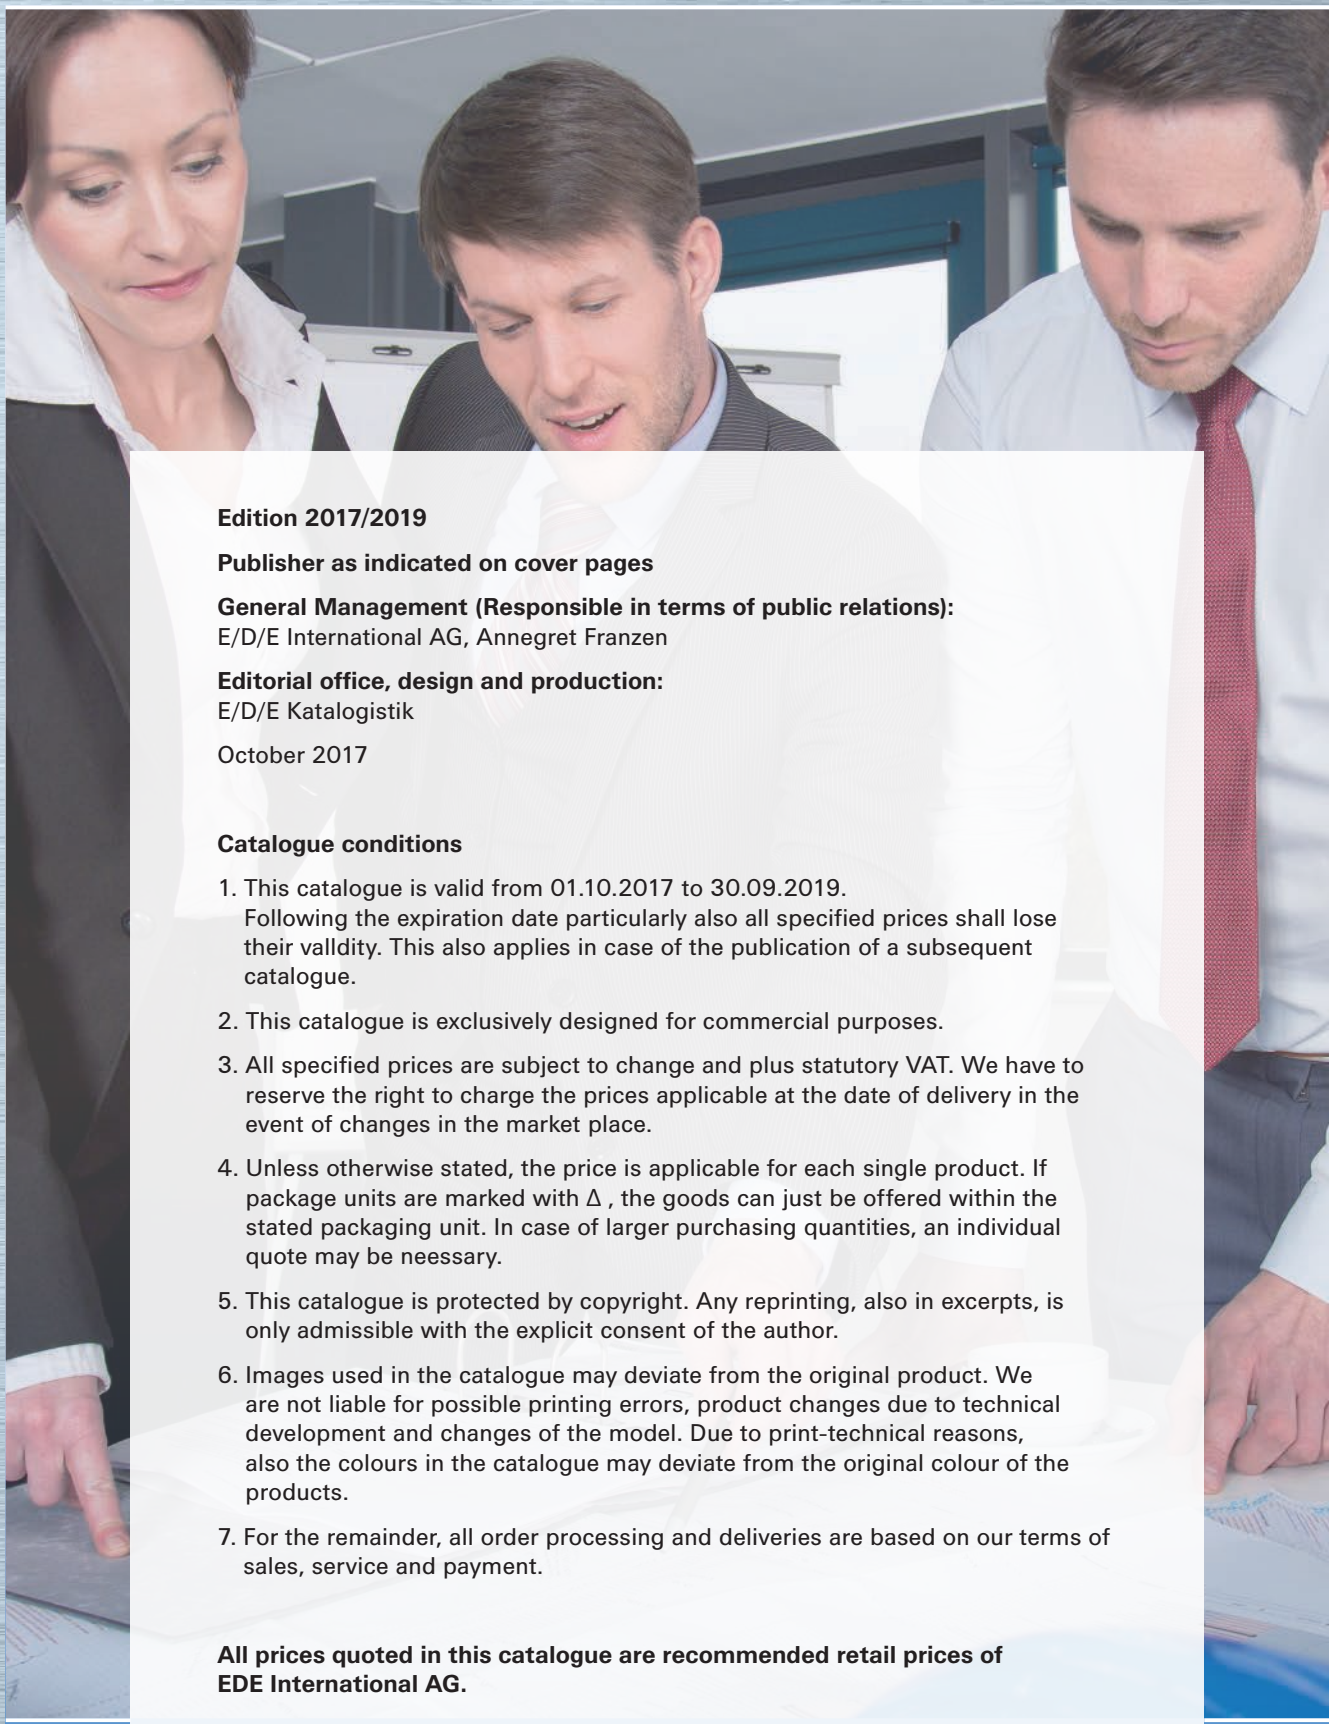
Shelf system for control of materials in continual demand

Further questions?
We're here to help.
Give us a call.

format professional quality plus

Together we'll
improve your
productivity.

# IMPRINT



**Edition 2017/2019**

**Publisher as indicated on cover pages**

**General Management (Responsible in terms of public relations):**
E/D/E International AG, Annegret Franzen

**Editorial office, design and production:**
E/D/E Katalogistik

October 2017

**Catalogue conditions**

1. This catalogue is valid from 01.10.2017 to 30.09.2019.
   Following the expiration date particularly also all specified prices shall lose their valldity. This also applies in case of the publication of a subsequent catalogue.
2. This catalogue is exclusively designed for commercial purposes.
3. All specified prices are subject to change and plus statutory VAT. We have to reserve the right to charge the prices applicable at the date of delivery in the event of changes in the market place.
4. Unless otherwise stated, the price is applicable for each single product. If package units are marked with Δ , the goods can just be offered within the stated packaging unit. In case of larger purchasing quantities, an individual quote may be neessary.
5. This catalogue is protected by copyright. Any reprinting, also in excerpts, is only admissible with the explicit consent of the author.
6. Images used in the catalogue may deviate from the original product. We are not liable for possible printing errors, product changes due to technical development and changes of the model. Due to print-technical reasons, also the colours in the catalogue may deviate from the original colour of the products.
7. For the remainder, all order processing and deliveries are based on our terms of sales, service and payment.

**All prices quoted in this catalogue are recommended retail prices of EDE International AG.**

# FOR BETTER **ORIENTATION**

## Item search and order placement made easy!

*Don't forget! Please state in every order!*

**Three details for a secure order processing:**

- 8-digit **article number** of the required article
- **Quantity**
- For control purposes – the **article description**

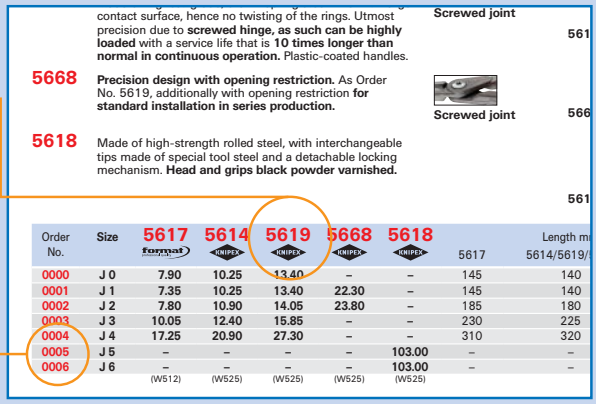
**Product groups:**
Our main catalogue contains a comprehensive tool range. To simplify the product search, the catalogue is divided in **9 product groups**.

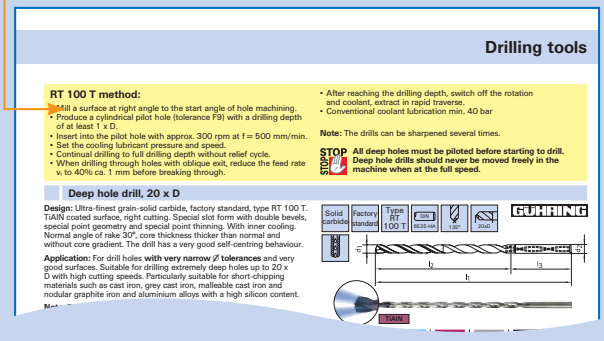
For a faster orientation you can find an overview with images of the content of the respective subgroup in front of every **product group**.

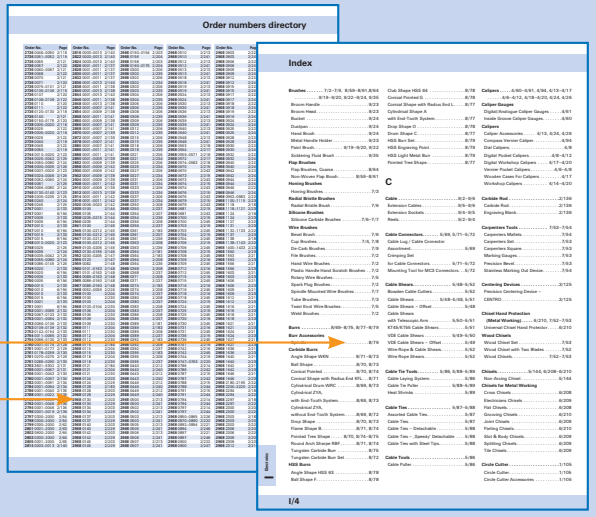
**Item numbers:**
Every single article is identified by an explicit item number. The item number consists of the 4-digit **main number** that you can find above the price column and the 4-digit **end number** that defines the different types or sizes of the respective article.

**All prices incl. VAT per piece (if not stated otherwise).**

**Table of Contents:**
**General reference:**
All texts, that are **highlighted in yellow**, constitute general reference texts.







At the end of the catalogue you will find the **key** and the **number directory**.

**www.format-quality.com**

format professional quality

# Guaranteed over all good dimensions

FORMAT means for you:
Best quality with an outstanding price-performance ratio. An added value that benefits you immediately.

You can be assured of the following: FORMAT products meet the strictest quality requirements and are therefore perfectly suitable for daily use in industry and craft.

With FORMAT you have a bigger choice, more possibilities when equipping your company. What else do you need?

## Pictogram Abstracts

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Tool material | e.g. | HSS | High-speed-HSS | HSS Co5 | HS steel with 5% Cobalt alloy content | Solid carbide | Solid carbide |
| Standard | e.g. | DIN 208-B | Equiv. to DIN 208 Form B – Spiral fluted | DIN 338 | Equiv. to DIN 338 | EN 22568 | Complies with the European standard 22568 |
| Type | e.g. | Type N | Machining of materials with normal resistance and hardness | Type W | Machining of materials with low resistance and hardness | Type H | Machining of materials with high resistance and hardness |
| Number of cutting edges | e.g. | Z 4 | Number of teeth 4 (4 cuts) | | | | |
| Thread | e.g. | M | Metric thread | 60° | With edge angle 60° | 2–3 C | Chamfer 2–3 threads, Form C |
| Tolerance | e.g. | H7 | Tolerance zone H7 | ISO 2 6H | Metric ISO threads/FORUM Usage class 2 Medium tolerance 6H | | |
| Shaft design | e.g. | DIN 1835-B | Cyl. shaft with Carrier surface acc. to DIN 1835 B | | Cylinder shaft | | |
| Point angle | e.g. | 90° | Countersink with 90° point angle | 130° | Spiral drill 130° point angle | | |
| Spiral angle | e.g. | 25–30° | Right spiral with 25° to 30° angle | ca. 7° | Left spiral with approx. 7° angle | | |
| Application | e.g. | | For through and blind holes | | Feed direction | | Dry machining possible |

## Cutting speed and feed rate

**All information regarding cutting speed and feed rate correspond to a recommended guideline.**
**This requires stable machine conditions, a low-vibration workpiece and the use of a suitable coolant.**

**Symbol mapping**

| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard processing over 60 HRC | Rust and acid resistant steels (INOX) | Ti, Ti-alloy and special steels | Cast-iron materials | Al, Al- and Mg alloy | Copper, brass, bronze |

| 0105 | 5.0 | | **Value sought 2:** | $v_f =$ | feed rate (mm/min) | | 0,110 |
| 0106 | 6.0 | | Formula: | $v_f =$ | n x f | | 0,115 |
| etc. | etc. | | Calculation: | $v_f =$ | 2785/min x 0.105 mm/U | | etc. |
| | | | Solution: | $v_f =$ | 292 mm/min | | |

## Surface finishing

Tools made of high speed steel or carbide because of their generally good basic properties are supplied with a bright finish without extra surface treatment. For special applications it is recommended that tools are optimised for diverse applications by surface finishing processes, to achieve the following goals:

- **Extended service life**
- **Lower cutting pressure**
- **Higher cutting speeds and feed rates**
- **Better surface quality**
- **Better dry processing**
- **Optimised hard processing**

### Surface finishing benefits at a glance

| | |
|---|---|
| TiN | Wear- and diffusion resistance |
| TiCN | Hardness, toughness |
| TiAlN AlTiN | Heat hardness, oxidation stability |
| Fire | Hardness, toughness, wear resistance |
| Steam | Lower slippage resistance |
| Nitrated | Hardness, wear resistance on cast iron |
| Signum | Extreme hardness, extreme heat resistance |
| Sirius® | Lower slippage resistance, high wear resistance |
| ZrN | High hardness, low friction coefficient |

### Titanium-nitride coating

TiN

Titanium-nitride is a gold-coloured protective layer applied by a PVD process (Physical Vapour Deposition). Higher hardness combined with a lower friction coefficient achieves a significantly longer service life and improved cutting performance. The TiN coating is primarily used for drills and thread bores.

### Titanium carbon-nitride coating

TiCN

Titanium carbon-nitride is a wear-protection layer applied by PVD, being harder than TiN and having a lower friction coefficient. Tool performance is increased through greater hardness and ductility combined with improved wear.
The TiCN coating is primarily used for NC drill bits, thread bores and end mills

### Titanium aluminium-nitride coating

TiAlN

Titanium aluminium-nitride is a multi-layer ceramic coating applied using the PVD method. The resulting greater hardness and oxidation stability make this coating ideal for higher speeds and feed rates for extended tool life.
The TiAlN coating is used mainly in drilling and milling machine processes, and is also recommended for dry processing.

### Aluminium titanium-nitride coating

AlTiN

Aluminium titanium nitride has a higher Al content compared to titanium aluminium nitride. This ensures an even higher oxidation resistance and has a greater layer hardness. The AlTiN coating is used mainly in drilling and milling machine processes, and is also recommended for dry processing.

### Zirconium nitride coating

ZrN

Zirconium nitride is suitable for machining non-ferrous materials, and especially for aluminium alloys. This coating is not good for cold welding of aluminium. Associated with high layer hardness and oxidation resistance are advantages that increase tool service life and effective feed rate and cutting speed.

### Fire coating (TiAlN/TiN)

Fire

Fire is a TiAlN/TiN multi-layer coating with a gradient structure. The combined benefits of TiAlN and TiN coatings are very good wear resistance with high thermal stability, hardness and toughness. In addition to the conventional wet application, this layer can also be used for minimum quantity lubrication and dry machining.
Fire coating is suitable for all spiral drills, thread bores and end mills, as well as removable discs.

### Steam tempering

steam

Steam tempering is a form of surface processing which reduces slide resistance and prevents edge build-up. Cold welding can also be avoided.
Steam tempering is primarily used with drills and thread bores.

### Nitriding

Nitrated

Nitriding is a surface machining process that increases hardness and wear resistance. Particularly for working with highly abrasive materials such as cast iron, which nitriding is particularly suitable for.
Nitriding is primarily used with drills and thread bores.

### Signum coating (TiALN/SiN)

Signum

Due to the special nano-composite structure with a protective layer of TiALN and SiN, this coating, with 5500 HV, is one of the hardest on the market. Particularly for difficult-to-machine materials. High heat wear resistance combined with high diffusion resistance.

### Sirius coating (TiAlN/zirconium nitride)

Sirius®

Sirius coating for the protection against damages to the thread cutter: the combination of TiAlN and zirconium nitride generates particularly tough tool surface with low friction values.

## Surface finishing processes compared

| Surface finish | Colour | Coating structure | Thickness µm | Hardness HV | Friction coefficient versus steel temperature | Application |
|---|---|---|---|---|---|---|
| TiN | gold-yellow | single-layer | 1–4 | 2300 | 0.50 | max. 600 C° |
| TiCN | light brown | multi-layered | 1–4 | 3000 | 0.40 | max. 400 C° |
| TiAlN AlTiN | violet | multi-layered | 3 | 3200 | 0.55 | max. 750 C° |
| Fire | red | multi-layered | 2–6 | 3300 | 0.60 | max. 850 C° |
| Steam | grey | surface treatment | max. 5 | 400 | – | max. 550 C° |
| Nitrated | silver-grey | surface treatment | 20 | 1300 | – | max. 550 C° |
| Signum | red-bronze | multi-layered | 1–5 | 5500 | 0.55 | max. 800 C° |
| Sirius® | pale gold | multi-layered | 1–5 | 3400 | 0.40 | max. 800 C° |
| ZrN | light-gold | multi-layer | 0.1–3 | 3400 | 0.50 | max. 900 C° |

## Micro drills

**Design:** HSS Co5, DIN 1899-A, type N.
Special drill, bright surface, right cutting, with reinforced shank, high concentricity and precise point geometry.

Ø tolerance: on spiral part 0/–0.004 mm.

**Application:** For drilling small holes with high drilling accuracy. Particularly suitable for high-alloy steels and for short and long chipping materials.

## Extra-short sheet metal drills with cyl. Shank

**Design:** HSS, similar to DIN 1897, Type DK 77.
Profile grinding, steam tempered surface, right cutting, with precise double-sided point geometry. With small cross-cutting and curved grinding around the circumference (no bevels). Point thinning according to DIN 1412, form A, Normal angle of rake, core thickness and core gradient.

**Application:** For drilling thin workpieces. For round and accurate drill holes (important for riveting). Particularly suitable for bodywork and metalwork, rivet holes, screw holes etc. as well as for use in hand drills.

**Note:** Further dimensions available on request.

## Machining drill (short drill) with cylinder Shank

**Design:** HSS, DIN 1897, type N.
Profile grinding, right cutting, with precise point geometry. Point thinning up to Ø 2.4 mm similar to cross-grinding; from Ø 2.4 mm according to DIN 1412, form A, Normal angle of rake, core thickness and core gradient.

**Application:** Suitable for use on machines, bench drills and hand drills. Particularly suitable for construction steels and steels up to 800 N/mm² in strength and for thin-walled materials (bodywork).

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Machining drill set

**Design:** HSS, DIN 1897, type N.
Profile grinding, right cutting, with precise point geometry. Point thinning up to Ø 2.4 mm similar to cross-grinding; from Ø 2.4 mm according to DIN 1412, form A. Normal angle of rake, core thickness and core gradient. Supplied in a robust, high quality metal cassette with automatic drill setup function when opened.

**Application:** Suitable for use on machines, drill benches and hand drills. Particularly suitable for construction steels and steels up to 800 N/mm² in strength and for thin-walled materials (bodywork).

* With intermediate sizes for tapped holes: 1 piece each Ø 3.3; 4.2; 6.8; 10.2 mm.

## Machining drill (short drill) with cylinder Shank

**Design:** HSS Co5, DIN 1897, type INOX. Profile grinding, right cutting, with precise point geometry and excellent thermal resistance. Point thinning > Ø 2.4 mm according to DIN 1412, form A, Normal angle of rake, core thickness thicker than normal and normal core gradient.

**Application:** Suitable for use on machines, bench drills and hand drills. Particularly suitable for rust/acid-resistant steels (VA steels), spring steel, austenitic steels and special alloys such as Hastelloy, Inconel and Nimonic.

## Machining drill set

**Design:** HSS Co5, DIN 1897, type INOX.
Profile grinding, right cutting, with precise point geometry and excellent thermal resistance. Point thinning from Ø 2.4 mm similar to according to DIN 1412, form A, normal angle of rake, core thickness thicker than normal and normal core gradient. Supplied in a robust, high quality metal cassette with automatic drill setup function when opened.

**Application:** Suitable for use on machines, bench drills and hand drills. Particularly suitable for rust/acid-resistant steels (VA steels), spring steels, austenitic steels and special alloys such as Hastelloy®, Inconel® and Nimonic®.

**Note:** Set consisting of (Order No. 1058).

* With intermediate sizes for tapped holes: 1 piece each Ø 3.3; 4.2; 6.8; 10.2 mm.

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Short drill with cylinder Shank

**Design: Profile grinding,** right cutting, with precise point geometry and excellent thermal resistance.
With special point thinning, angle of rake larger than normal, normal core thickness and normal core gradient.

**Application:** Suitable for use on NC machines, revolver benches and hand drills. Particularly suitable for rust/acid-resistant steels (VA steels), alloyed/non-alloyed steels up to 800 N/mm², cold/hot work steels, roller bearing steels, non-ferrous metals, cast iron materials and lots of plastics.

## Short drill with cylinder Shank

**Design:** HSSE-PM, DIN 1897, type GT 500 DZ.
Profile grinding, TiN-coated surface, right cutting, with precise point geometry and excellent thermal resistance. With special point thinning. Angle of rake normal, normal core thickness and no core gradient.

**HSSE-PM is characterised by its high toughness (higher edge strength, wear-resistant) and a longer tool life.**

**Application:** Durable and break-proof short drill made from **PM steel** for machining high-alloy steels, tempered and case-hardeing steels, cast iron, brass and bronze.

## Spiral drill cyl. Shank, rolled

**Design:** HSS, DIN 338, type N.
Right cutting, with precise point geometry, rolled.
Robust design

**Application:** The roll forged finish of the spiral drill prevents breaks in the joint. This makes it particularly suitable for robust drilling work - as a cost-effective alternative for handheld machines.

**Note:** Available as a set (Order No. 1008 on 1/15).

## Spiral drill with cyl. Ground shank

**Design: Profile grinding,** right cutting, with precise point grind as well as high concentricity and pitch accuracy. Point thinning up to ∅ 2.4 mm similar to cross-grinding, cross-grinding from 3.0 mm according to DIN 1412 C. Normal angle of rake, core thickness and core gradient.

**Application:** High-performance standard drill for drilling alloyed and non-alloyed steel.

## Spiral drill with cyl. Ground shank

**Design: Profile grinding,** right cutting, with precise point grind as well as high concentricity and pitch accuracy. Point thinning up to Ø 2.4 mm similar to cross-grinding, cross-grinding from 3.0 mm according to DIN 1412 C. Normal angle of rake, core thickness and core gradient. Supplied in a robust, high quality plastic cassette with automatic drill setup function when opened.

**Application:** High-performance standard drill for drilling alloyed and non-alloyed steel.

## Spiral drill with cyl. Shank, profile grinding

**Design:** HSS, DIN 338, type N.
Right cutting, profile grinding, bright surface, steam tempered from 2.4 mm, with precise point geometry.
Normal angle of rake, core thickness and core gradient.

**Application:** Particularly suitable for steel and steel casting (alloyed and non-alloyed) grey cast iron, malleable cast iron, nodular iron, sintered iron and graphite.

HSS | DIN 338 | Type N | 118° | 25–30°

**1001** steam

**Note:** Available as a set (Order No. 1028 on 📖 1/19).

**1002** steam

**Note:** Available as a set (Order No. 1002 on 📖 1/19).

## Spiral drill set with cyl. Shank, profile grinding

**Design: Profile grinding,** right cutting, with precise point grind as well as high concentricity and pitch accuracy. Point thinning up to Ø 2.4 mm similar to cross-grinding. Normal angle of rake, core thickness and core gradient. Supplied in a robust, high quality plastic cassette with automatic drill setup function when opened.

**Application:** Particularly suitable for steel and steel casting (alloyed and non-alloyed) grey cast iron, malleable cast iron, nodular iron, sintered iron and graphite.

HSS | DIN 338 | Type N | 118° | 25–30°

**1028** steam

Bright surface, steam tempered from 2.4 mm Ø. Normal angle of rake, core thickness and core gradient. Set consisting of (Order No. 1001).

**1002** steam

Bright surface, steam tempered from 2.4 mm Ø. Normal angle of rake, core thickness and core gradient. Set consisting of (Order No. 1002).

* With intermediate sizes for tapped holes: 1 piece each Ø 3.3; 4.2; 6.8; 10.2 mm.

## ADVANCEDLINE®

**Especially for industrial production designed as high-performance countersink**

**Benefits:**

- Up to 50 % longer life
- Up to 25 % faster countersinking
- Significantly higher cutting performance

1/115

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Spiral drill with cyl. Shank

**Design:** HSS, DIN 338, type N.
Profile grinding, TiN coated surface, right cutting, with precise point geometry. Point thinning < Ø 2.4 mm similar to cross-grinding. Normal angle of rake, core thickness and core gradient.

**Application:** Particularly suitable for steel and steel casting (alloyed and non-alloyed) grey cast iron, malleable cast iron, nodular iron, sintered iron and graphite.

**Note:** Available as a set (Order No. 1029 on 1/21).

* With intermediate sizes for tapped holes: 1 piece each Ø 3.3; 4.2; 6.8; 10.2 mm.

These Hand tap set are found on 1/164

## Spiral drill with cyl. shank

NEW

**Design:** Profile grinding, right cutting, with precise cross point geometry, normal angle of rake, core thickness and core gradient.

**Application:** The proportion of cobalt provides for improved thermal resistance, ideal for alloyed and non-alloyed steels (up to 900 N/mm² in strength), hot and cold work steels, tempered and case-hardening steels and for rust and acid-resistant steels.

## Spiral drill with cyl. Shank

**Design:** HSS Co5, DIN 338, type N.
Profile grinding, bright surface, steam tempered from 2.4 mm, right cutting, with precise point geometry. Normal angle of rake, core thickness thicker than normal and normal core gradient.
**Application:** Particularly suitable for alloyed/non-alloyed steels and casting types above 800 N/mm² in strength, hot and cold work steels, roller bearing steels, high-alloy steels, tempered steels and case hardening steels.

## Spiral drill with reduced shank

NEW

**Design:** Profile grinding, right cutting, with precise cross point geometry, offset shank, normal angle of rake, core thickness and core gradient.

**Application:** Very well suited to drilling larger drill diameters with all conventional drills with a chuck measuring up to 13.0 mm.

## High-performance spiral drill with cylinder Shank

**Design:** HSS Co8, DIN 338, type N.
**Profile grinding,** TiAlN coated surface, with high concentricity and graduation precision as well as HSS Co8 for extremely high thermal resistance. Point thinning with cross point according to NAS 907 P3 of the aircraft industry standards. Normal angle of rake, core thickness much thicker than normal and core gradient smaller than normal.

**Application:** High-performance spiral drill for particularly strong and high strength alloys based on CrNi, Hastelloy®, Inconel®, Monel®, Nimonic®, rust, acid and heat-resistant steels, hard-wearing sheets and steels and bronzes up to 1400 N/mm² in strength.
The special cross grind geometry allows very good drilling behaviour, better and cleaner hole accuracy, and excellent hole exit.

## Spiral drill with cyl. Shank

**Design:** HSS, DIN 338, type W.
Profile grinding, right cutting, bright surface, with precise point geometry as well as wide, ground clamping grooves and narrow twist. Without point thinning. Angle of rake larger than normal, normal core thickness and without core gradient.

**Application:** For drilling soft and long-chipping materials.
Particularly suitable for soft and long chipping materials, aluminium alloys (long chipping), zinc, copper, silumin, electrodes, plastics (soft) and wood.

## Spiral drill with cyl. Shank

**Design:** HSS, Co5, DIN 338.
**Profile grinding,** right cutting, with precise point geometry as well as special point thinning and excellent thermal resistance. Normal core gradient. Angle of rake larger than normal (35°). Core thickness thicker than normal, therefore very robust and flexible use.

**Application:** Suitable for short drilling depths up to 3 x D. Particularly suitable for titanium and titanium alloys, rust/acid/heat-resistant steels and austenitic steels, high strength/short chipping steels from 1400 N/mm² in strength and special alloys such as Hastelloy®, Inconel® and Nimonic®.

## Spiral drill set with cyl. Shank

**Design:** HSS, Co5, DIN 338.
Profile grinding, right cutting, with precise point geometry as well as special point thinning and excellent thermal resistance. Angle of rake larger than normal (35°), core thickness thicker than normal and normal core gradient. Supplied in a robust, high quality plastic cassette with automatic drill setup function when opened.

**FT deburring countersink EL 1300**

Sturdy universal deburring countersink with blade magazine.

## Spiral drill with cyl. Shank

**Design:** HSS, Co5, DIN 338.
Sturdy, powerful model, profile grinding, right cutting, with precise point geometry as well as special point thinning and excellent thermal resistance. Normal core gradient.

**Application:** Particularly suitable for rust/acid/heat-resistant steels and austenitic steels, high strength/short chipping steels from 900 N/mm² in strength and special alloys such as Hastelloy®, Inconel® and Nimonic®.

## Spiral drill set with cyl. Shank

**Design:** HSS Co5, DIN 338, TiN coated surface, type FU. Profile grinding, right cutting, with precise point geometry as well as special point thinning and excellent thermal resistance. Angle of rake larger than normal (35°), core thickness thicker than normal and normal core gradient. Set consisting of (order no. 1023). Supplied in a robust, high quality plastic cassette with automatic drill setup function when opened.

* With intermediate sizes for tapped holes: 1 piece each Ø 3.3; 4.2; 6.8; 10.2 mm.

## Spiral drill with cyl. Shank

**Design:** HSS Co5, DIN 338, type TF. Particularly sturdy model. Profile grinding, right cutting, bright surface, nitrated bevels from Ø 2.4 mm with precise point geometry as well as wide clamping slots with heavily rounded back edges and excellent thermal resistance. Point thinning according to DIN 1412, form A. Angle of rake larger than normal, core thickness thicker than normal and without core gradient.

**Application:** Suitable for drilling depths above 3 x D due to bevel nitration and wide clamping slots. Particularly suitable for alloyed/non-alloyed steels and casting types above 800 N/mm² in strength, hot and cold work steels, roller bearing steels, high-alloy steels, tempered steels and case hardening steels.

* With intermediate sizes for tapped holes: 1 piece each Ø 3.3; 4.2; 6.8; 10.2 mm.

## Spiral drill with cyl. Shank

**Design:** HSS Co5, DIN 338, Typ INOX. Particularly sturdy model. Profile grinding, right cutting, with precise point geometry and excellent thermal resistance. Without point thinning. Angle of rake larger than normal, core thickness thinner than normal and normal core gradient.

**Application:** Particularly suitable for rust/acid/heat-resistant and austenitic steels (INOX).

**1025** Bright
Profile grinding, bright surface.
**Note:** Available as a set (Order No. 1033 on 📖 1/35).

**1026** Bright
Profile grinding, bright surface.
**Note:** Available as a set (Order No. 1026 on 📖 1/34, 1/35).

## Spiral drill with cyl. Shank

**Design:** HSS-E PM, DIN 338, type GT 500 DZ.
TiN coated surface, right cutting, with special point geometry and ratio point thinning. Normal angle of rake, core thickness thicker than normal and without core gradient. The drill has a very good self-centring behaviour and produces short chips, even from long-chipping materials. Sturdy, powerful model, **profile grinding,** right cutting, with precise point geometry as well as special point thinning and excellent thermal resistance. Normal core gradient.

**Application:** Suitable for short drilling depths up to 5 x D. Suitable for construction and carbon steels, high alloy steels, tool steels, castings and casting alloys, magnesium alloys, non-ferrous metals and plastics.

## Pin hole conical drill with cyl. Shank

**Design:** HSS, DIN 1898/1, type N. Right cutting, surface steam tempered from Ø 3 mm with precise point geometry. Point thinning according to DIN 1412, form A. Normal angle of rake, core thickness and core gradient.

**Note:** Use for manufacturing our pin hole reamer on 1/141.

**Application:** For producing conical holes 1:50 in one step for conical pins according to ISO 2339 (DIN 1) and ISO 8736 (DIN 7978).

## Spiral drill with cyl. Shank, profile grinding, long

**Design:** HSS, DIN 340, type N.
Right cutting, bright surface, steam tempered from 2.5 mm, **profile grinding**with precise point geometry. Normal angle of rake, normal core thickness core gradient higher than normal.
Hole depth 10 x D.

**Application:** Particularly suitable for deep drilling in alloyed/ non-alloyed steels and casting types above 800 N/mm², nodular iron, sintered iron, nickel silver and graphite.
**Note:** Further dimensions available on request.

## Spiral drill with cyl. Shank, long

**Design:** HSS Co5, DIN 340, type Ti.
Profile grinding, bright surface. Right cutting, with cone-shaped point.

**Application:** Particularly suitable for titanium and titanium alloys, rust, acid, heat-resistant and austenitic steels, Hastelloy®, Inconel® and Nimonic®. Also suitable for reaming.
**Note:** Further dimensions available on request.

## Spiral drill with cyl. Shank, long

**Design:** HSS Co5, DIN 340, type TF. Profile grinding, bright surface, nitrated bevels from Ø 2.5 mm as well as wide clamping slots with heavily rounded back edges and excellent thermal resistance. Good centring characteristics due to point thinning according to DIN 1412, form A. Angle of rake larger than normal, core thickness considerably thicker than normal and without core gradient. Hole depth up to 10 x D.

**Application:** Particularly suitable for alloyed/non-alloyed steels and casting types above 800 N/mm² in strength, hot and cold work steels, roller bearing steels, high-alloy steels, tempered steels and case hardening steels.

## Spiral drill with cyl. Shank, extra long

**Design:** DIN 1869, type TF. Sturdy special drill, profile grinding, right cutting, with precise point geometry as well as wide clamping slots with heavily rounded back edges. Point thinning according to DIN 1412, form A. Angle of rake larger than normal, core thickness considerably thicker than normal and without core gradient.

**Application:** Versatile drill for drilling extremely deep holes up to 10 x D under difficult conditions such as poor chip removal, therefore causing deficient cooling of the drill tip. Particularly suitable for extremely deep holes in grey cast iron and steels up to 1000 N/mm² in strength as well as CrNi steels and INOX steels.

## Spiral drill with Morse taper Shank, rolled

**Design:** HSS, DIN 345, Typ N. Right hand cutting, roll forged/extruded without interruption structure, with precise point grind. Point thinning according to DIN 1412, form A, Normal angle of rake, core thickness and core gradient.

**Application:** Particularly suitable for steel and steel casting (alloyed and non-alloyed) grey cast iron, malleable cast iron, nodular iron, sintered iron and graphite. Rolled/extruded, without joint disconnection

**Note:** Cost-effective tool for small and medium batch sizes.

## Spiral drill with Morse taper Shank

**Design:** HSS, DIN 345, type N.
Right cutting, **profile grinding,** steam tempered surface, with precise point geometry.
Point thinning according to DIN 1412, form A. Normal angle of rake, core thickness and core gradient.

**Application:** Particularly suitable for steel and steel casting (alloyed and non-alloyed) grey cast iron, malleable cast iron, nodular iron, sintered iron and graphite.

## Spiral drill with Morse taper Shank

**Design:** HSS Co5, DIN 345, Type INOX. Profile grinding, bright surface, right cutting, with precise point geometry and excellent thermal resistance. Angle of rake larger than normal, core thickness thinner than normal and normal core gradient.

**Application:** Particularly suitable for rust/acid/heat-resistant and austenitic steels (INOX).

## Boring bush drill with Morse taper Shank

**Design:** HSS, DIN 341, type N.
Profile grinding, steam tempered surface, right cutting, with precise point geometry. Good centring characteristics due to point thinning according to DIN 1412, form A. Angle of rake, core thickness and core gradient normal.

**Application:** Suitable for drilling through boring bushes (important for sloped and uneven surfaces) as well as drilling deep holes up to 10 x D. Particularly suitable for alloyed and non-alloyed steels, steel casting, grey cast iron, malleable cast iron, nodular iron, sintered iron, nickel silver and graphite.

## Counterbore with Morse taper Shank

**Design:** HSS, DIN 343, type N.
Profile grinding, steam tempered surface, right cutting.
Normal angle of rake, normal core thickness and without core gradient.
The spiral length is longer than the height of the bushes.

**Application:** For drilling out pre-drilled, pre-cast or pre-punched holes. The sturdy construction and 3 blades means that alignment inaccuracies and runouts in pre-drilled holes are corrected. Furthermore, the drill wall surface is improved so that a reamer can be subsequently used for perfect final reaming. Please pay attention to the column "smallest Ø of pre-drilled hole".

**Note:** The cut diameter must be smaller than the hole to be drilled out. Further dimensions or HSS-E designs or VHM/HM assembly or long flute counter bores according to DIN 1864 available on request.

## Spiral drill with morse taper shank, extra long

**Design:** HSS, DIN 1870, Typ TF.
Particularly stable model, profile grinding, cutting to the right, up to Ø 16,0 mm nitrated chamfers, from Ø 16.0 mm steam tempered surface, with precise point grind and wide clamping grooves with heavily rounded back edges. Good centring characteristics due to point thinning according to DIN 1412, form A. Angle of rake larger than normal, core thickness considerably thicker than normal and without core gradient.

**Application:** Suitable for drilling extremely deep holes under difficult conditions e.g. poor chip removal, therefore causing deficient cooling of the drill tip. Particularly suitable for grey cast iron and steels up to 850 N/mm² in strength.

## Changeable head holder HT 800

**Design:** Made of high quality, high strength tool steel. Optimised flute shank according to DIN 6535, collar according to DIN 6595, stepped holder back. Absolutely backlash-free due to elastic clamping protection. High efficiency due to high feed.

DIN 6535-HE | Factory standard

GÜHRING

**Application:** Surface nickel plated, giving less wear.

## Change plate HT 800 WP

**Design:** Ultra-finest grain-solid carbide.
High toughness and bend break-resistance. The precise point geometry, 140° point angle and the ratio point thinning result in a self-centring blade geometry. Cutting tolerance h7.

**Note:** Further dimensions available on request.

**1098** Fire
Cutting tolerance: h7
**Application:** Steel, steel castings and stainless steel (ferritic and martensitic).

**1099** Fire
Cutting tolerance: m7
**Application:** Grey cast iron, nodular graphite casting and malleable cast iron.

**1102** Bright
Cutting tolerance: h7
**Application:** Aluminium and other non-ferrite metals.

**1105** TiAlN
Cutting tolerance: h7
**Application:** Stainless steel and steel castings (austenitic and austenitic/ferritic).

## Torque screwdriver for clamping screws

GEDORE

**Design:** With ergonomic and slip resistant rubber handle. Simple and exact value setting by means of the micrometer scale ring. The set values are automatically fixed by the "Positive Lock" mechanism. With precision circulation ball coupling for controlled right and left tightening. Constant repeatability with a tolerance of ±6 % of set value. When reaching the set value, the automatic slip mechanism releases clearly and prevents exceeding the value. Suitable for activating 1/4"hexagon bits according to C 6.3 DIN 3126 or with adapter piece (included in delivery) for socket wrench inserts according to DIN 3124. Conforms to EPA (Electro Protected Area).
Scope of delivery: Torque wrench with certification according to DIN EN ISO 6789, 1/4" adapter gear coupling, user manual and handle with slider.

**Application.** In the electrical and electronics industry as well as apparatus manufacturing industry. Fast and controlled tightening of screws allows application in series production and quality control.

| Order No. | Scale range | 6230 GEDORE | Scale graduation | Actuation accuracy % | Length mm |

| 0050 | 1.2–6 N•m | 361.00 (W522) | 0.1 Nm | ± 6 | 196 |

## Short stepped drill with cyl. Shank

**Design:** HSS, according to factory standard, type N.
Very torsion stable model, profile grinding, right cutting, with precise point geometry. Short form according to DIN 1897, point thinning according to DIN 1412, form A. Normal angle of rake, core thickness and core gradient. Drilling and countersinking are produced in a single step, aligned to each other. Ø tolerance: $d_1$ = h6.

HSS | Factory standard | Type N | 118°

**Note:** The cutting speed is orientated towards the large diameter, the feed towards the small diameter.

| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Centre drill

**Design:** HSS, DIN 333-R, with radius (minimal danger of breaking), 60° countersink angle, profile grinding, bright surface.
Ø tolerance: Ø 1.0–2.5 = + 0.14 mm
Ø 3.15–5.0 = + 0.18 mm
Ø 6.3 = + 0.22 mm

**Application:** Standard centre drill for producing centre holes according to DIN 332, sheet 1, form R (with radius).

**1129** Bright — Right-hand cutting.

**1134** Bright — Right-hand cutting.

**1135** Bright — Left-hand cutting.

## NC drilling device with cyl. Shank

**Design:** HSS Co5, according to factory standard.
Very sturdy model, profile grinding, right cutting, with precise point geometry and narrow cross blade. With a side clearance angle of 12°/30°. Helix angle smaller than normal, core thickness considerably smaller than normal and taper normal.
From Ø 6 mm with carrier surface according to DIN 1835-B.
Ø tolerance: h6.

**Application:** For precise drill positioning. Used for centring and chamfering thread holes in one step.

## Solid carbide centre drill

**Design:** solid carbide (K10/K20), according to factory standard. Profile grinding, bright surface, right cutting, with precise point geometry. Point thinning > Ø 1.60 mm according to DIN 1412, form A.
Ø tolerance: Ø 1.00–2.5 = + 0.14 mm
Ø 3.15–5.0 = + 0.18 mm
Ø 6.30 = + 0.22 mm

**Application:** For centring holes without protective countersinking. Particularly suitable for abrasive materials, AISI alloys, fibre-reinforced plastics, duroplasts with a sanding effect on blades and fibres, high strength steels, steel castings, grey cast iron, hard castings, manganese hard steel, CrNi steels, bronzes and light and non-ferrous metals.

## Solid carbide NC drill bit with cyl. Shank

**Design:** Solid carbide (K10/K20), type N, according to factory standard. Very sturdy model, profile grinding, right cutting, with precise point geometry and narrow cross blade. Without point thinning, with a clear side angle of 12°/30°. Angle of rake smaller than normal, core thickness much thinner than normal and normal core gradient. From Ø 6 mm with carrier surface according to DIN 6535-HB.
Ø tolerance: up to Ø 10 mm = h6,
from Ø 10 mm: cutting tolerance = h8.

**Application:**
90° –For drilling and simultaneous countersinking if a spiral drill with a smaller Ø follows.
142° –For intervening with the main blade of the following spiral drill.

Especially suitable for precise positioning and fast boring on NC machines and jig boring machines. Used for centring and chamfering thread holes in one step. Only suitable for drilling. Particularly suitable for high strength steels, steel castings, grey cast iron, hard castings, manganese hard steel, CrNi steels, bronzes and light and non-ferrous metals.

## Carbide tipped spiral drill with cyl. Shank

**Design:** Carbide (K10), DIN 8037, type N.
Right cutting, bright surface, with precise point geometry, steam tempered slots and carbide tipped cutting inserts according to DIN 8010. Point thinning according to DIN 1412, form A. Normal angle of rake, core thickness and core gradient. Delivery from Ø 3 mm: shank with carrier according to DIN 1809

**Application:** Particularly suitable for spring band steel, hard castings above 300 HB, pure molybdenum and tough bronzes.

## Solid Carbide spiral drill, SuperLine, 3 x D

**Design:** Ultra-finest grain-solid carbide, DIN 6537, type RT 100 U. Fire coated surface, right cutting with special point geometry and ratio point thinning. Normal angle of rake, core thickness thicker than normal and without core gradient. The drill has a very good self-centring behaviour and produces short chips, even from long-chipping materials.

Carbide application group: K/P – universal use.
(Ultra-fine grain K05–K50/P05–P50)

**Application:** For accurate holes with narrow Ø tolerances and good surfaces. Suitable for drilling holes up to 3 x D with the best cutting values. Particularly suitable for long and short-chipping materials such as GGS and ADI, casting materials, grey cast iron, nodular graphite iron and malleable cast iron, high alloy AISi alloys and alloy steels up to 1200 N/mm² in strength.

## Solid carbide spiral drill, 3 x D

**Design:** solid carbide, DIN 6537 K, type H.
TiAlN coated surface, right cutting with 4 surface point. Convex flutes give the tool extremely high stability and ensure the optimum chip breaking. The slot profile adapted to suit hard machining safely transports the chips out of the hole.

Carbide application group: K/P –universal use.
(Ultra-finest grain K05–K50/P05–P50)

**Application:** Suitable for holes in annealed steels up to 62 HRC.

**Note:** The drills can be sharpened and recoated several times.

Solid carbide | DIN 6537 K | Type H | DIN 6535-HA | 120° | 15° | 3xD

## Solid carbide spiral drill, 4 x D

**Design:** solid carbide, DIN 6537 K, type RT 100 VA.
TiAlN coated surface, right cutting with special point geometry and cross point thinning. Normal angle of rake, normal core thickness and without core gradient. The drill has a very good self-centring behaviour and produces short chips.

**Application:** For accurate alignment drilling **with narrow Ø tolerances** and good surfaces. Suitable for drilling holes up to 4 x D with high cutting values. Particularly suitable for cutting stainless steels.

**Note:** The drills can be sharpened and recoated several times.

## Solid carbide small diameter drill, 5 x D

NEW

GÜHRING

Solid carbide | Factory standard | 140° | 30° | 5xD

**Design:** solid carbide, according to factory standard.
TiAlN coated surface, right cutting, with special point geometry and ratio point thinning. Normal angle of rake, without core gradient. Drill with internal cooling. The drill has a very good self-centring behaviour and produces short chips, even from long-chipping materials.

**Application:** For accurate alignment drilling **with very narrow Ø tolerances** and good surfaces. Suitable for drilling holes up to 5 x D with high cutting values. Particularly suitable for long and short-chipping materials such as construction and case-hardening steels, steel castings, tempered steels, carbon steels, bronzes, castings, high alloy AlSi alloys and alloy steels up to 1400 N/mm² in strength.

| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide spiral drill, SuperLine, 5 x D

GÜHRING

Solid carbide | DIN 6537 | Type RT 100 U | 140° | 5xD

**Design:** Ultra-finest grain-solid carbide, DIN 6537, type RT 100 U. Fire coated surface, right cutting with special point geometry and ratio point thinning. Normal angle of rake, core thickness thicker than normal and without core gradient. The drill has a very good self-centring behaviour and produces short chips, even from long-chipping materials.

Carbide application group: K/P –universal use.
(Ultra-fine grain K05–K50/P05–P50)

**Application:** For accurate alignment drilling with narrow Ø tolerances and good surfaces. Suitable for drilling holes up to 5 x D with high cutting values. Particularly suitable for long and short-chipping materials such as construction and case-hardening steels, steel castings, tempered steels, carbon steels, bronzes, castings, high alloy AlSi alloys and alloy steels up to 1200 N/mm² in strength.

**Note:** The drills can be sharpened and recoated several times.

## Solid carbide spiral drill, 5 x D

**Design:** Solid carbide, DIN 6537 L, type RT 100 VA.
TiAlN coated surface, right cutting with special point geometry and cross point thinning. Normal angle of rake, normal core thickness and without core gradient, with internal cooling. The drill has a very good self-centring behaviour and produces short chips.

**Application:** For accurate alignment drilling **with very narrow Ø tolerances** and good surfaces. Suitable for drilling holes up to 5 x D with high cutting values. Particularly suitable for cutting stainless steels, titanium and Ti-alloys and special alloys.

**Note:** The drills can be sharpened and recoated several times.

High-performance cooling lubricant OPTA is found on 📖 9/106.

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Solid Carbide spiral drill, SuperLine, 7 x D

**Design:** Ultra-finest grain-solid carbide, according to factory standard, type RT 100 U.
Fire coated surface, right cutting with special point geometry and ratio point thinning. Normal angle of rake, core thicker than normal and without core gradient, with internal cooling. The drill has a very good self-centring behaviour and produces short chips, even from long-chipping materials.

Hard metal application group: K/P –universal use.
(Ultra-fine grain K05–K50/P05–P50)

**Application:** For accurate alignment drilling with narrow Ø tolerances and good surfaces. Suitable for drilling deep holes up to 7 x D with high cutting values. Particularly suitable for long and short-chipping materials such as construction and case-hardening steels, steel castings, tempered steels, carbon steels, bronzes, castings, high alloy AlSi alloys and alloy steels up to 1200 N/mm² in strength.

**Note:** The drills can be sharpened and recoated several times.

## Solid carbide spiral drill, SuperLine, 12 x D

**Design:** Ultra-finest grain-solid carbide, according to factory standard, type RT 100 U. Fire coated surface, right cutting with special point geometry and ratio point thinning. With internal cooling. Normal angle of rake, core thickness thicker than normal and without core gradient. The drill has a very good self-centring behaviour and produces short chips, even from long-chipping materials. Hard metal application group: K/P –universal use. (Ultra-fine grain K05–K50/P05–P50)

**Application:** For accurate holes with narrow Ø tolerances and good surfaces. Suitable for drilling deep holes up to 12 x D with high cutting values. Particularly suitable for economical production of deep drill holes in steel, castings and non-ferrous metals.

**Note:** The drills can be sharpened and recoated several times.

## RT 100 T method:

- Mill a surface at right angle to the start angle of hole machining.
- Produce a cylindrical pilot hole (tolerance F9) with a drilling depth of at least 1 x D.
- Insert into the pilot hole with approx. 300 rpm at f = 500 mm/min.
- Set the cooling lubricant pressure and speed.
- Continual drilling to full drilling depth without relief cycle.
- When drilling through holes with oblique exit, reduce the feed rate $v_f$ to 40% ca. 1 mm before breaking through.
- After reaching the drilling depth, switch off the rotation and coolant, extract in rapid traverse.
- Conventional coolant lubrication min. 40 bar

**Note:** The drills can be sharpened several times.

**STOP** **All deep holes must be piloted before starting to drill. Deep hole drills should never be moved freely in the machine when at the full speed.**

## Deep hole drill, 20 x D

**Design:** Ultra-finest grain-solid carbide, factory standard, type RT 100 T. TiAlN coated surface, right cutting. Special slot form with double bevels, special point geometry and special point thinning. With inner cooling. Normal angle of rake 30°, core thickness thicker than normal and without core gradient. The drill has a very good self-centring behaviour.

**Application:** For drill holes **with very narrow Ø tolerances** and very good surfaces. Suitable for drilling extremely deep holes up to 20 x D with high cutting speeds. Particularly suitable for short-chipping materials such as cast iron, grey cast iron, malleable cast iron and nodular graphite iron and aluminium alloys with a high silicon content.

**Note:** The drills can be sharpened several times.

## Solid carbide drill reamer, 4 flute, 5 x D

NEW

**Design:** Right cutting, 4 cutting edge, special bevel and special thinning.

**Application:** For drilling and reaming into the full piece **in one step**, with a possible achievable drill hole tolerance of IT7. This significantly reduces the main and additional, with the same surface quality, dimensional accuracy and roundness as reaming.

## VHM spiral drill, SuperLine, 5 x D

**Design:** Ultra-finest grain-solid carbide, DIN 6537, type FT 200. Surface bright, right hand cut, 3 cutting edges with point-like tip, special bevel and special thinning. Normal angle of rake 28°, core thickness thicker than normal and without core gradient.

**Application:** For drilling into the full piece for holes with an accurate position and shape up to 5 x D. Particularly for castings and long chipping al-alloys.

**POSISTOP**

Workpiece stop for clamping short parts with a workpiece diameter of 15-130 mm.

## SDS-plus hammer drill

**Design:** SDS-plus mounting shank, quiet drilling and effective drill dust transportation thanks to aggressive tip and helix design allow the optimum impact energy rate. Certified by the Prüfgemeinschaft Mauerbohrer (PGM) according to the requirements of the Deutschen Instituts für Bautechnik (DIBt).

**Application:** For hammer drills with SDS-plus mounting shank.

**1250** With special blade for concrete, limestone, masonry.

**1272** NEW With 4 cutting edges for concrete, masonry, natural stone, sand-lime brick, ceramic tile, marble, brick.

**1255** With bionic blade for concrete, masonry, concrete reinforcement, limestone, marble, brick.

* Pre-drill at least 150 mm deep with a short drill of the same diameter.
** Designed as a twist hammer drill

## SDS-plus hammer drill set

**1253** Set consisting of (order no. 1250).

**0010** Supplied in plastic cassette
**0005** Supplied in metal cassette.

**1272** NEW Set consisting of (order no. 1250).

**0010** Supplied in plastic cassette
**0005** Supplied in metal cassette.

**1255** Set consisting of (order no. 1255).

Supplied in Heller Maxxbox.

## SDS-plus drill

**1254** **Design:** Paddle blade with 3 wings for improved effectiveness in material removal and better force transfer when drilling due to the waved head design. The embedded carbide head withstands armouring hits. Long service life due to the extremely durable single-phase carbide alloy, very fast drilling dust removal without deflagration due to the wide twist shape, vibration optimised triple twist, DuraTec annealing process using high temperature soldering and shot-blasting technology. Certified by Prüfgemeinschaft Mauerbohrer (PGM) according to the requirements of the Deutschen Instituts für Bautechnik (DIBt).

**Application:** Concrete of even the hardest qualities, reinforced concrete, natural stone, masonry, brick.

**1252** **Design:** Blade profile in Y-shape for even better cutting performance and smooth running. High drilling speed, ergonomically optimised - protects joints and muscles. The computer calculated Twinmax twist profile guarantees an optimised impact energy rate. HST annealed surface for higher break-resistance in hammer drilling operation and higher strength for armouring hits. Certified by the Prüfgemeinschaft Mauerbohrer (PGM) according to the requirements of the Deutschen Instituts für Bautechnik (DIBt).

**Application:** Concrete, stone, masonry, marble, brick.

## SDS-max hammer drill

**1265**

**Design:** 2 blades for faster drilling results. High drilling speed thanks to optimised head geometry. Precise initial drilling behaviour due to special blade design. The wide twist shape ensures good drilling progress. HST annealed surface for higher break-resistance in hammer drilling operation. Certified by the Prüfgemeinschaft Mauerbohrer (PGM) according to the requirements of the Deutschen Instituts für Bautechnik (DIBt).

**Application:** Concrete, stone, masonry.

**1269**

**Design:** Triple wing blade for increased effectiveness in material removal. Higher transfer of force when drilling due to wave-shaped head design. Extended service life due to single-phase carbide alloy. Embedded carbide head - withstands armouring hits. Very fast drilling dust removal without deflagration due to the wide twist shape. Vibration-optimised triple helix. DuraTec annealing process using high temperature soldering and shotblasting technology. Certified by the Prüfgemeinschaft Mauerbohrer (PGM) according to the requirements of the Deutschen Instituts für Bautechnik (DIBt).

**Application:** Concrete of even the hardest qualities, reinforced concrete, natural stone, masonry, brick.

**1270**

**Design:** Robust cutting profile in Y-form enables precise positioning and ideal drill start behaviour. Particularly powerful and strong, even in case of armouring hits, thanks to the stabilised main blade. High service life in concrete and armouring due to enlarged, rounded secondary blade. Better hold when starting to drill and prevention of splintering due to reinforced 2-point centring tip. Extremely fast drilling rate due to large-volume Twinmax 3D spiral. With DuraTec annealing process using high temperature soldering and shot-blasting technology. Certified by the Prüfgemeinschaft Mauerbohrer (PGM) according to the requirements of the Deutschen Instituts für Bautechnik (DIBt).

**Application:** Concrete, stone, masonry, marble, brick.

* Pre-drill at least 150 mm with a short drill with the same diameter.

## Carbide core cutter

**Design:** Stable bits/socket/cutter set with SDS-plus or hex drive shank and hardened steel body with M16 internal thread. The optimum round motion ensures clean holes and the low-wear carbide teeth ensure maximum stability. High quality slot soldering with long tool life, including in hard materials. Supplied incl. replaceable centre drill. Max. drilling depth 50 mm.

**Application:** For concrete, stone, masonry, brick, tile and light construction materials etc.

**Note:** Suitable mount shank and centre drill (order no. 1274).

| Order No. | Ø mm | 1271 format | Area of use | Shank |
|---|---|---|---|---|
| 0650 | 68 | 54.60 | Switch boxes | Hexagon SW 12 mm |
| 0800 | 80 | 64.40 | Junction boxes | Hexagon SW 12 mm |
| 0651 | 68 | 56.70 | Switch boxes | SDS-plus |
| 0801 | 80 | 64.40 (W120) | Junction boxes | SDS-plus |

## Diamond bit

**Design:** Diamond socket countersink with extremely durable high-end diamond blades for excellent material removal and high drilling speeds. The innovative drill head with special twist shape endures high drilling speed, fast drilling dust removal and reduce segment wear. Extremely precise and clean results, even in damp sandstone. Perfect for installations thanks to the exact cut in dry drilling with low levels of wear. Max. drilling depth 60 mm.

**Application:** For sandstone, masonry.

| Order No. | Ø mm | 1274 format | Area of use | Number of segments |
|---|---|---|---|---|
| 0680 | 68 | 91.70 | Switch boxes | 3 |
| 0820 | 82 | 100.50 (W120) | Junction boxes | 4 |

| Order No. | Mandrel | 1274 format |
|---|---|---|
| 0005 | Hexagon SW 12 mm | 15.40 |
| 0006 | SDS-plus | 20.50 (W120) |

## HM centre drill

**Design:** Carbide centre drill in sturdy design for fast and safe drill start on all surfaces. To suit mount Shank (order no. 1271/1274).

| Order No. | Ø mm | 1274 format | Length mm | Suitable for |
|---|---|---|---|---|
| 0008 | 9 | 4.13 | 120 | HM-Bohrkrone Bestell-Nr. 1271 |
| 0010 | 8 | 4.13 NEW (W120) | 130 | Diamant-Bohrkrone Bestell-Nr. 1274 |

## Carbide hammer drill bit RatioQuick

**Design:** Increased drilling dust removal due to alternate flat and trapezoidal tooth design. Extremely fast propulsion, perfect mix of chisels and drills in one step, strong penetration even in armoured concrete.

**Application:** For concrete, stone, masonry, marble, brick. Use with centre drill (order no. 1276 1000).

| Order No. | Ø mm | 1276 heller | Area of use | Number of Carbide teeth |
|---|---|---|---|---|
| 0065 | 65 | 125.00 | Switch boxes | 6 |
| 0080 | 80 | 150.00 (W119) | Junction boxes | 8 |

## HM centre drill Ratio Quick

**Design:** Centre drill in sturdy design for fast and safe drill start on all surfaces. For carbide hammer drill bit Ratio Quick

| Order No. | Ø mm | 1276 heller | Length mm |
|---|---|---|---|
| 1000 | 12 | 21.40 (W119) | 155 |

## RebarCutter armouring drill

**Design:** With embedded and individually soldered carbide teeth. The drill also has an integrated ejector aid for simple removal of the armouring from the drill body. The shank has a thread for quick changeover between the armouring drill and hammer drill.

**Application:** For use with SDS-plus ratio adapter, 100 % suitable for hammer drills. Ideal for reinforced concrete with the usual building site armouring. The hammer drill hits armouring. The armouring drill is used and the armouring drilled through. Then the hammer drill is used again and drilling continues.

**Note:** Only cut through armouring with authorisation from a structural engineer.

| Order No. | Ø mm | 1266 heller | Drilling depth mm | Total length mm |
|---|---|---|---|---|

## Adapter for Ratio Quick hammer drills

**Application:** For armouring drill RebarCutter (order no. 1266) and Ratio carbide hammer drill (order no. 1276) in SDS-plus or SDS-max hammer drills.

| Order No. | Mandrel | 1267 heller | Length mm |
|---|---|---|---|
| 0010 | SDS-plus | 37.20 | 108 |
| 0020 | SDS-max | 37.20 (W119) | 185 |

## Multi-purpose keyhole saw Allmat

**Design:** High drill bit with sturdy base and ground carbide teeth on all sides, which can be sharpened. The clamping area is large and therefore ensures quick drill dust removal without sticking. Drilling residues are also easy to remove. Max. drilling depth 65 mm.

**Application:** Ideal for installation of sockets and junction boxes. **Torsion-free drilling**is guaranteed and sockets are countersunk in one step due to the high and sturdy drill body. The partially ground teeth prevent burning when drilling in wood. Suitable for a number of materials such as aluminium, insulation, gas concrete, plasterboard, wood and sandstone. For use on machines with SDS-plus and hexagon shank.

| Order No. | Ø mm | 1275 heller | Area of use |
|---|---|---|---|
| 0680 | 68 | 33.90 | Switch boxes |
| 0820 | 82 | 43.60 (W121) | Junction boxes |

To suit mount shank (order no. 1275).

| Order No. | Ø mm | 1275 heller | Length mm |
|---|---|---|---|
| 0010 | 8 | 4.80 (W121) | 100 |

## Stone and concrete drill

**Design:** With round shank. The computer calculated twist profile ensures optimum removal of drilling dust, smoother drilling and optimum impact energy transport. Extremely long tool lives are achieved by the high strength soldering of carbide plates and the annealed surface, which results in a guaranteed higher break-resistance in impacts and higher strength for armouring hits. Up to 50% more holes than standard concrete drills. Certified by the Prüfgemeinschaft Mauerbohrer.

**Application:** For concrete, stone, masonry, brick, light construction materials, granite and marble.

## Stone and concrete drill set

**Design:** Supplied in full steel cassette. Set consisting of (order no. 1259).

| Order No. | Set contents mm | 1268 format |
|---|---|---|
| 0010 | 4; 5; 2 x 6; 8; 10; 12 | 15.70 (W120) |

## Stone drill set

**Design:** Impact drill with round shank. Rolled spirals for normal loads. Equipped with carbide cutting plate for standard drilling performance. Supplied in plastic cassette

**Application:** For stone, masonry, brick and light construction materials.

| Order No. | Set contents mm | 1268 format |
|---|---|---|
| 0005 | 4; 5; 6; 8; 10 | 6.95 (W120) |

1268 0005

## Concrete and natural stone drill ProXtreme

**Design:** Triangular mount prevents "slipping" in the chuck. Wide range of applications and perfect centring thanks to the partially ground carbide plate. Excellent speed due to optimum head geometry and the large volume twist design. The special hard-jet technique ensures extremely good performance properties, a long service life and excellent drill start behaviour.

**Application:** Concrete, granite, marble, masonry, wall tiles, sandstone, stone.

| Order No. | Ø mm | 1258 heller | Spiral length mm | Total length mm |

## Allmat universal drill

**Design:** Universal drill with round shank. Easy drill start, even on smooth and hard surfaces, thanks to the diamond-ground carbide cross blade. With a ground outer diameter for exact drilling holes. Designed for a longer service life.

**Application:** For masonry, wall tiles, marble, plastics, light materials, metal, non-ferrous metals and coated chipboard. Also suitable for use with light impacts.

| 1000 | 5; 6; 8; 10 | 20.90 (W119) |

## Glass drill QuickBit CeramicMaster

**Design:** With tapering cross blade and refined surface for less friction and a longer service life. Exact drill start, including on smooth and sensitive surfaces. The blades can be sharpened. **With 1/4" hexagon shank.**

**Application:** Glass and tile drill. Exact holes on sensitive and smooth surfaces are achieved by the geometry of the cross blade. For ceramic, tiles, hard-fired tiles, glass, Perspex, mirror glass etc.

# DampMaster Compact

Wood and building moisture analyser for 3 groups of wood and 8 construction materials.

Laserliner Innovation in Tools

4/153

## Precision sheet spiral drill (spiral counter bore)

**Design:** According to factory standard, CBN deep sharpened, straight fluted. Chuck slippage is avoided by the 3-surface shank. With cross point and laser print of hole Ø and speed. The hole Ø can still be read with the tool rotating.

**Application:** For burr-free drilling and reaming of sheets, pipes and profiles. Works without burrs and chatter marks and can be used in hand drills and box column drills. No punch marking required.

| | |
|---|---|
| For steel plate | 0.1–2.0 mm |
| Nirosta sheet (V2A) | 0.1–1.0 mm |
| Plastics | up to 10.0 mm |
| Non-ferrous metals | 0.1–5.0 mm |

**Note:** To increase the service life, we recommend the use of drilling paste (Order No. 1312 0005, 📖 1/97).

## Stepped drill for crash barrier assembly

**Design:** HSS, TiCN coated surface.
Stepped drill with cross point and variable spiral slot. Chuck slippage is avoided by the 3-surface shank. The special cone in the cylindrical area prevents tipping or catching during the drilling process. Drill chuck protection with integrated attachment ring. With laser print of hole Ø and speed. The hole Ø can still be read with the tool rotating.

**Application:** Specially for holes in crash barriers and fully galvanised materials. Insert depth up to 3.5 mm.

**Note:** Use of drilling oils possible.

**Information on articles for cable screw-connections**
The threads are metric ISO precision thread, each with a gradient of 1.5 for all sizes. In distribution cabinets with wall thicknesses up to max. 3-5.5 mm, cable screw connections are screwed into the body. The thread core hole is drilled with one of our stepped drills for cable screw connections. Special cutting tap bits (M12-M32) have been developed for the corresponding thread. The cutting taps have a long pilot tip, which is used to fix the tool in the hole in order to create a 100 % aligned thread, even with single-sided pressure. The tap drive is designed so that it can be operated with a standard hexagon insert ("nut) and a ratchet using just one hand. This type of drive saves time and space.

## Special cutting tap bit for cable screw connections

NEW

**Design:** Short design with hexagon drive for working with one hand, including in difficult to access areas. Guide pins for thread core holes for perfect, aligned threads.
Drive with nut and ratchet.
For metric ISO precision thread DIN 13.

**Application:** Specially for processing distribution boxes with wall thicknesses of 3.0 mm to max. 5.5 mm.

## Spot weld miller hexagon shank

**Design:** HSS.
With double-sided cutting, replaceable and rotating milling bit as well as setting screw for precisely setting the milling depth. The hexagonal shank causes a 100% power transfer, thus in every bushing the countersink is extremely slip-free. Scope of supply: spot weld milling cutter with milling bit and centring pin.

**Application:** For detaching spot welded sheet parts without misshaping the sheet or pulling it out.

**Welding protection helmet Optrel e650**

Suitable for electrodes, metal inert gas, high performance, cored wire, TIG, plasma and micro-plasma welding as well as plasma cutting.

## Core drills

NEW

format professional quality

**Design:** HSS-Co, AlTiN coated surface, with Weldon shank ∅ 19 mm, 2 carrier surfaces and 1 countersink for Rota-Quick®.
Inner hole 6.35 mm.

**Application:** For use in magnetic base drills and column drills with MK mount. The core drill only machines a thin material ring. The remaining drill core is ejected by a guide and ejector pin using spring force. The chips are quickly moved up for disposal and the risk of breakage minimised. Even large drilling diameters require relatively low amounts of energy. The core drill machines only a small part of the overall area in comparison to the spiral drill. This results in huge savings in power and time.

Inner hole 6.35 mm.

**Application:** For use in magnetic base drills and column drills with MK mount. The core drill only machines a thin material ring. The remaining drill core is ejected by a guide and ejector pin using spring force. The chips are quickly moved up for disposal and the risk of breakage minimised. Even large drilling diameters require relatively low amounts of energy. The core drill machines only a small part of the overall area in comparison to the spiral drill. This results in huge savings in power and time.

## Accessories for core drills

**1326** **Design:** Guide pin for core drill. To suit core drill (order no. 1326 and 1327).

**1327 2019 + 3019** **Design:** Tool holder AMK2/AMK3 morse cone 2 or 3 for core drills with Weldon shank Ø 12–60 mm. With automatic internal cooling and nipple for coolant tube. To suit all machines with drilling spindle MK2 or MK3. New, improved and lighter design with soft-touch grip element for better handling and lower machine loads. Supply includes coolant connection nipple.

**1327 4019 + 5019** **Design:** Quick-change mount holder Rota-Quick® morse cone 2 or 3 for all machines with drilling spindle MK3, Ø 12–60 mm. With automatic internal cooling and nipple for coolant tube.
The quick-clamp mount Rota-Quick® allows a very quick tool change without additional tools. Supply includes coolant connection nipple and stable plastic case.

**Functions:** Turn the ring in a clockwise direction and hold - insert the core drill in the mount - let go of the ring - it stops automatically.
To suit core drill (order no. 1326 and 1327).

## Circle cutter

**Application:** Metal sheets up to 5 mm in thickness and plastics and sealing materials etc. up to 30 mm in thickness can be cut with GFS circle cutters. Thicker materials can also be cut out by using special blades. The various Ø can easily be set by moving the clamping device. For cutting out holes in sheet metal, composite materials and plastics. Cuts elastic materials with the corresponding blades (HSS-E, HSS-E, TiN coated; carbide soldered) without losses.

The circle cutters are available in 3 sizes:

**Type Liliput:** Suitable for holes from 18 mm to 80 mm. The blades are clamped directly in crossbars. Mounts for straight and drawing cuts are available.

**Type 00:** Suitable for holes from 30 mm to 200 mm. The blades are clamped in special steel holders. The tools with cyl. or MK2 shank are only suitable for machining metals with Ø up to 120 mm.

**Type 00a:** Suitable for holes from 30 mm to 400 mm. The blades are clamped in special steel holders. Vertical design.

## Circle cutter

**Design:** Liliput, scope of delivery:
1 centre drill Ø 5 mm.
1 HSS blade no. 122 for thin-walled sheets. Mount option for drawing blade no. 122 and straight blade no. 2 and no. 3.

| Order No. | Type | 1330 afs | Cutting range mm | Shank Ø mm |
|---|---|---|---|---|

## Countersink bit 90° with 1/4" hexagonal shank

HSS | DIN 335-C | Z 3 | 90°

format professional quality

**Design:** HSS, DIN 335-C. 90° countersink angle. Radial taper-ground, bright surface, with straight clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials.
The hexagonal shank (1/4" bit shank according to DIN 2126) causes a 100 % power transfer, thus in every bushing the countersink is extremely slip-free.

**Application:** Suitable for universal chatter and burr-free drilling, countersinking, milling and deburring work. The countersink bit can also be used as a hand deburrer together with the corresponding activation tools such as grips, toggles or ratchets with a 1/4" hexagon mount.

**Note:** Sufficient supply of coolant is essential.

## Spiral drill bit

is found on 1/8, 6/153.

## Cross hole countersink, 90°

**Design:** HSS, 90° countersink angle, with cylinder shank. With evenly running special taper-ground in the cone coat. The good blade geometry results in a light, spiral cut. The chips are pushed up in the shank direction by the inclined hole and cannot damage the countersink. This makes the countersink round and protects the machine spindle.

**Application:** Suitable for light and chatter-free hole deburring and countersinking. **Particularly suitable for long chipping materials.** Sharpening is possible by simply resharpening using an abrasive pencil on the blade front. Spiral fluted with fixed pilot pin

## Cross hole countersink, 90°

**Design:** HSS, Co5. 90° countersink angle. With evenly running special taper-ground in the cone coat. The good blade geometry results in a light, spiral cut. The chips are pushed up in the shank direction by the inclined hole and cannot damage the countersink. This makes the countersink round and protects the machine spindle.

**Application:** Suitable for light and chatter-free hole deburring and countersinking. Equally suitable for almost all materials due to the excellent cutting properties. Sharpening is possible by simply resharpening using an abrasive pencil on the blade front.

## 90° countersinks and deburring countersinks with cylinder Shank

**Design:** DIN 335-C. 90° countersink angle. Axial and radial taper-ground and CBN deep-ground. With straight, u-shaped clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials.

**Application:** Suitable for universal chatter and burr-free drilling, countersinking and deburring work for countersunk screws DIN 963, DIN 964, DIN 965 and DIN 966 in one step. Please note the large countersink range!
The excellent cutting properties and easy machining process result from the cone-shaped back taper on the coat and angle of rake. The countersink achieves the best results with the strongest feed and lowest cutting speed.

**Note:** Sufficient supply of coolant is essential for uncoated designs.

## 90° countersinks and deburring countersinks with cylinder with uneven pitch

NEW

**Design:** With radial taper, **uneven pitch** and straight clamping slots. Also provided with cutting and clearance angles for the most common materials.

**Application:** The strong uneven pitch allows a particularly smooth run when countersinking meaning that the surface is cleaner and that the cutting load is reduced to a minimum. Suitable for countersinking and deburring work for countersunk screws DIN 963, DIN 964, DIN 965, and DIN 966 in one step.

## 90° manual deburrer

**Design:** HSS, DIN 335-D, 90° countersink angle. Axial and radial taper-ground and CBN deep-ground, bright surface With straight clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials as well as a user-friendly 2-component handle.

**Application:** For drilling, countersinking and deburring work by hand for countersunk screws DIN 963, DIN 964, DIN 965 and DIN 966 and DIN 7991.

# ADVANCEDLINE®

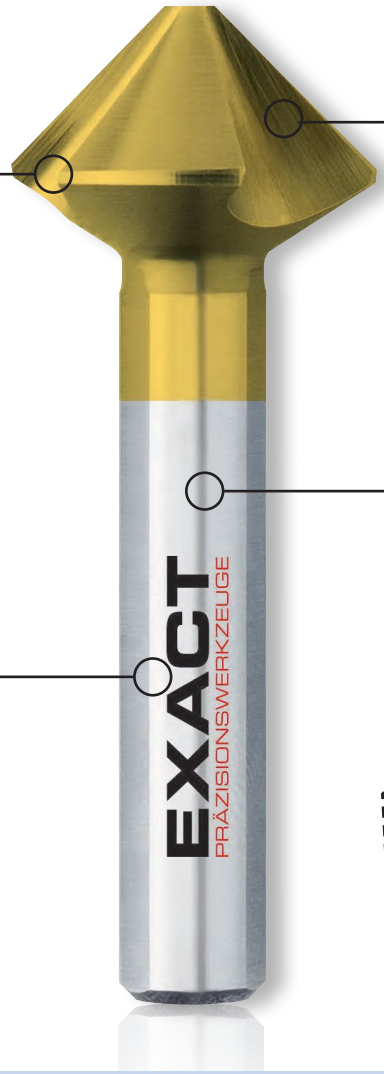
## THE SENKER INNOVATION

**NEW**
**CUTTING GEOMETRY**

Harmonious division prevents uneven wear of cutting edges

**OPTIMISED GRINDING PROCESS**

Extremely high rotation accuracy with noticeably reduced effort



**PATENTED ROTASTOP®-SHAFT**

100 % security against slipping of countersink in chuck with optimum torque transmission

**MORE PERFORMANCE**

Extreme high wear and heat resistance guarantees maximum life spans

TEST IT

## ADVANTAGE THROUGH INNOVATION

### Advantages

+ up to 50% longer life
+ up to 25 % quicker sinking
+ extremely quiet run
+ no slipping in chuck
+ optimum sinking pattern

Also available in various coatings

EXACT
PRÄZISIONSWERKZEUGE

## 90° "ADVANCED LINE®" countersinks and deburring countersinks with Rotastop-shank®

**Design:** Similar to DIN 335-C. New, innovative taper-ground process. Optimised machining geometry resulting in up to 50% longer tool life. Rotastop-shank® for good torque transmission, no spinning in the drill chuck. With straight, u-shaped clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials.

**Application:** Suitable for universal chatter and burr-free drilling, countersinking and deburring work for countersunk screws DIN 963, DIN 964, DIN 965 and DIN 966 in one step. Please note the large countersink range!
The excellent cutting properties and easy machining process result from the cone-shaped back taper on the coat and angle of rake. The countersink achieves the best results with the strongest feed and lowest cutting speed.

**Note:** Sufficient supply of coolant is essential for uncoated designs.

## Countersinks and deburring countersinks 90° ASP

HSS-E PM | DIN 335-C | Z 3 | 90°

format professional quality

**Design:** HSS-E PM, ASP2030®, DIN 335-C. 90° countersink angle. Axial and radial taper-ground and CBN deep-ground, bright. With straight, u-shaped clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials.

**Application:** Particularly suitable for the highest loads in INOX steel, stainless steel and Hardox. Suitable for universal chatter and burr-free drilling, countersinking and deburring work for countersunk screws DIN 963, DIN 964, DIN 965, DIN 966 and DIN 7991 in one step. Please note the large countersink range!
The excellent cutting properties and easy machining process result from the cone-shaped back taper on the coat and angle of rake. The countersink achieves the best results with the strongest feed and lowest cutting speed.

**Note:** Sufficient supply of coolant is essential. HSS-E PM has, in comparison to conventional HSS steels, a consistent, fine grained material structure. This means they have good hot hardness, pressure resistance and resistance to wear.

## 60° countersinks and deburring countersinks with cylinder Shank

HSS | DIN 334-C | Z 3 | 60°

format professional quality

**Design:** HSS, DIN 335-C. 60° countersink angle. Axial and radial taper-ground. With straight, u-shaped clamping slots and drilling spaces ground from full pieces. Also provided with cutting and clearance angles for the most common materials.

**Application:** Suitable for universal chatter and burr-free drilling, countersinking and deburring work for countersunk screws DIN 963, DIN 964, DIN 965, DIN 966 and DIN 7991 in one step. Please note the large countersink range!
The excellent cutting properties and easy machining process result from the cone-shaped back taper on the coat and angle of rake. The countersink achieves the best results with the strongest feed and lowest cutting speed.

**Note:** Sufficient supply of coolant is essential for uncoated designs.

## Piloted countersink combination system

HSS

**Design:** Consisting of holder, countersink pilot pins.
The GFS pin-countersink combination system covers a wide range of drilling and countersinking combinations due to the holder variation options with the countersinks and pilot pins.

**This results in the following advantages:**

1. Only 4 holder sizes are required for a working range of 5 mm to 85 mm.
2. The pilot pins rotating versions in size 1 from Ø 8.5 mm and in size 2 from Ø 14.0 mm and are provided with internal cooling.
3. Pin countersinks HSS-TiN coated and with soldered carbide blades are available from stock.
4. Pin countersinks are also available with turning plate assembly from Ø 32 mm.
5. The individual elements can be combined in anyway within one size.
6. The pilot pins can be replaced without removing the countersink.

**Application:** Suitable for DIN countersinks and with the corresponding pin/countersink combinations for step holes or countersinks outside of the norm. The holder remains in the machine when changing. The countersink and pin are clamped using a hexagon screwdriver according to DIN 911.

**Note:** Sufficient supply of coolant is essential.

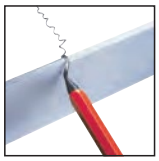
## FT quick deburrer tool set RB 1000

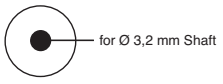
**Design:** Set consisting of:
1 sturdy 12 mm hexagon aluminium handlef with blade mount made of steel

1 replaceble HSS blade E 100 (order no. 1498 0240)

**Application:** Manageable deburring tool for occasional deburring work.

| Order No. | 1494 |
|---|---|
| 0010 | 8.70 (W193) |





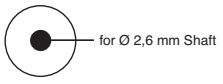
format professional quality

## FT universal deburrer set B – EL 1100

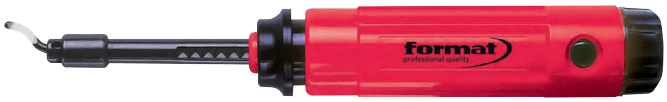
**Design:** Set consisting of:
1 universal plastic handle EL 1000 FT with blade magazine
1 blade holder EL 0100 FT
1 HSS blade B 10 (order no. 1498 0200)
1 HSS blade B 20 (order no. 1498 0220)

**Application:** Universal deburring tool for all fine and medium deburring work on holes as well as on straight, convex and concave edges.

| Order No. | 1484 |
|---|---|
| 0010 | 11.70 (W193) |



format professional quality

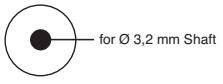


## FT universal deburrer set E – EL 1200

**Design:** Set consisting of:
1 universal plastic handle EL 1000 FT with blade magazine
1 blade holder EL 0200 FT
1 HSS blade E 100 (order no. 1498 0240)
1 HSS blade E 200 (order no. 1498 0260)
1 HSS blade E 300 (order no. 1498 0270)

**Application:** Universal deburring tool for all medium and the heaviest deburring work on holes as well as on straight, convex and concave edges.

| Order No. | 1486 |
|---|---|
| 0010 | 14.25 (W193) |



format professional quality

## FT deburring countersink EL 1300

**Design:** Set consisting of:
1 universal plastic handle EL 1000 FT with blade magazine
1 blade holder EL 0300 FT
For all countersinks type C
1 HSS countersink head C20 (order no. 1498 0530)

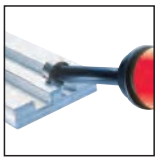
**Application:** Sturdy universal deburring countersink for holes above Ø 4 mm. For HSS countersink heads up to Ø 30 mm.

| Order No. | 1488 |
|---|---|
| 0010 | 35.20 (W193) |

format professional quality

## FT keyway deburrer EL 1400

**Design:** Set consisting of:
1 length adjustable blade holder EL 0400 FT for blades with the ID letter "K"
1 blade FT N80K
1 universal plastic handle EL 1000 FT
**Application:** For keyways, shanks and drill holes. For slot widths corresponding with the blade size.

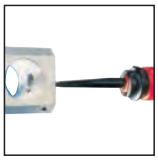


| Order No. | 1488 format |
|---|---|
| 0015 | 19.90 (W193) |

## FT inner deburrer EL 1501

**Design:** Set consisting of:
1 length blade holder EL 0500 FT
1 45° offset deburring blade FT D66
1 universal plastic handle EL 1000 FT
1 Allen key EL DK10 FT

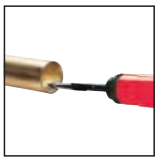
**Application:** For deburring the insides of cross-holes, piercings and indentations.



| Order No. | 1488 format |
|---|---|
| 0020 | 25.10 (W193) |

## FT medium triangular scraper EL 1600

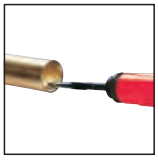
**Design:** Set consisting of:
1 blade holder EL 0602 FT with inner thread (NF 10)
1 replaceable triangular blade FT T40 with outer thread
1 universal plastic handle EL 1000 FT
1 protective cap

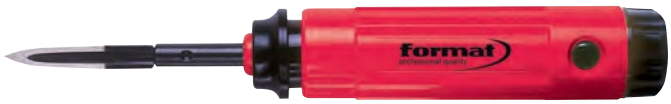


| Order No. | 1490 format |
|---|---|
| 0005 | 20.40 (W193) |

## FT maxi-triangular scraper EL 1601

**Design:** Set consisting of:
1 universal plastic handle EL 1000 FT with blade magazine
1 blade holder EL 0602 FT with length adjustment 6-125 mm
For all scrapers type T
1 HSS triangular scraper blade T60 with protective cap
**Application:** Sturdy triangular scraper for deburring difficult areas.





| Order No. | 1490 format |
|---|---|
| 0010 | 23.40 (W193) |

## FT double sheet deburrer tool set DB 2000

**Design:** Set consisting of:
1 sturdy plastic handle with hand protection
2 round HSS cutting discs N 80
(order no. 1498 0600)

**Application:** The blade runs along the full length on both sides. This allows sheets and bars up to 12 mm in thickness to be deburred on both sides at the same time. For stainless steel sheets corresponding cutting discs N 80 M 42 (Order No. 1498 0610) are available.

| Order No. | 1492 format |
|---|---|
| 0010 | 22.10 (W193) |

## FT deburrer tool set EL 7000

**Design:** Supplied in a plastic case.

**Application:** The hand deburrer set covers 80 % of all applicable deburring work. Concave edges, holes, cross-holes, surfaces and slots can be deburred with this set. The deburring tools used most often immediately at hand.

| Order No. | Set contents | | 1496 format |
|---|---|---|---|
| 0007 | 1 quick deburrer EL-RB 1000 | (order no. 1494 0010) | 115.00 |
| | 1 E-set EL 1200 | (order no. 1486 0010) | |
| | 1 B-set EL 1100 | (order no. 1484 0010) | |
| | 1 medium triangular scraper EL 1600 | (order no. 1490 0005) | |
| | 1 deburring countersink EL 1300 | (order no. 1488 0010) | |
| | 1 slot deburrer EL 1400 | (order no. 1488 0015) | |
| | 1 inner deburrer EL 1501 | (order no. 1488 0020) | |

(W193)

## FT deburrer tool set GT 1000

NEW

**Design:** 4 standard deburring tools, handy and practical in pocket knife format. Lightweight and space-saving. All blades can be replaced.
**Application:** For individual deburring on outer and inner surfaces and for drill holes.

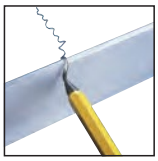
| Order No. | Set contents | 6725 format |
|---|---|---|
| 0004 | GT-E100 blade,<br>GT-B20 blade,<br>GT-D50 triangular scraper,<br>GT-BC1040 crank countersink | 57.70 |

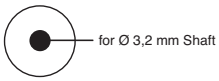
(W193)

## Quick deburrer tool set RB 1000

**Design:** Set consisting of:
1 sturdy 12 mm hexagon aluminium handlef
with blade mount made of steel
1 replaceble HSS blade E 100
(order no. 6719 0240)

**Application:** Manageable deburring tool for occasional deburring work.





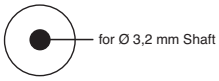
GRATTEC

| Order No. | 6713 GRATTEC |
|---|---|
| 0010 | 9.40 (W554) |

## Compact deburrer set GT-K

**Design:** Set consisting of:
1 compact handle with wear-resistant steel blade guide
1 HSS blade GT-E 100 (Order No. 6719 0240)
1 HSS blade GT-E 200 (Order No. 6719 0260)
1 HSS blade GT-E 300 (Order No. 6719 0270)

**Application:** Universal deburring tool for all deburring work on holes as well as on straight, convex an concave edges.



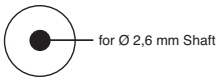
GRATTEC

| Order No. | 6703 GRATTEC |
|---|---|
| 0010 | 15.45 (W554) |

## FT universal deburrer set B – EL 1100

**Design:** Set consisting of:
1 universal plastic handle EL 1000 GT with blade magazine
(Order No. 6719 0010)
1 blade holder EL 0100 GT
(Order No. 6719 0100)
1 HSS blade B 10
(Order No. 6719 0200)
1 HSS blade B 20
(Order No. 6719 0220)

**Application:** Universal deburring tool for all fine and medium deburring of holes as well as on straight, convex and concave edges.



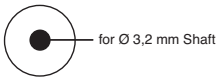
GRATTEC

| Order No. | 6704 GRATTEC |
|---|---|
| 0010 | 12.65 (W554) |

## FT universal deburrer set B – EL 1200

**Design:** Set consisting of:
1 universal plastic handle EL 1000 GT with blade magazine
(order no. 6719 0010)
1 blade holder EL 0200 GT
(order no. 6719 0110)1
1 HSS blade E 100
(order no. 6719 0240)
1 HSS blade E 200
(order no. 6719 0260)
1 HSS blade E 300
(order no. 6719 0270)

**Application:** Universal deburring tool for all medium and the heaviest deburring work on holes as well as on straight, convex and concave edges.



GRATTEC

| Order No. | 6705 GRATTEC |
|---|---|
| 0010 | 15.30 (W554) |

## Deburring countersink EL 1300

**Design:** Set consisting of:
1 universal plastic handle EL 1000 GT with blade magazine (order no. 6719 0010)
1 blade holder EL 0300 GT For all countersinks type C (order no. 6719 0130)
1 HSS countersink head C20 (order no. 6719 0530)

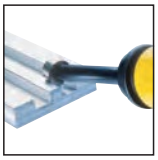
**Application:** Sturdy universal deburring countersink for holes above ∅ 4 mm. For HSS countersink heads up to ∅ 30 mm.

| Order No. | 6706 GRATTEC |
|---|---|
| 0010 | 36.70 (W554) |

## GT keyway deburrer EL 1400

**Design:** Set consisting of:
1 length adjustable blade holder EL 0400 GT for blades with the ID letter "K"
1 blade GT N80K
1 universal plastic handle EL 1000 GT

**Application:** For keyways, shanks and drill holes. For slot widths corresponding with the blade size.



| Order No. | 6706 GRATTEC |
|---|---|
| 0015 | 20.80 (W554) |

## GT inner deburrer EL 1501

**Design:** Set consisting of:
1 blade holder EL 0500 GT (order no. 6719 0150)
1 45° offset deburring blade GT D66 (order no. 6719 0440)
1 universal plastic handle EL 1000 GT (order no. 6719 0010)
1 Allwn key EL DK10 GT

**Application:** For deburring the insides of cross-holes, piercings and indentations.

| Order No. | 6706 GRATTEC |
|---|---|
| 0020 | 26.20 (W554) |

## GT medium triangular scraper EL 1600

**Design:** Set consisting of:
1 blade holder EL 0602 GT with inner thread (NF 10) (order no. 6719 0120)
1 replaceable triangular blade GT T40 with outer thread (order no. 6719 0400)
1 universal plastic handle EL 1000 GT (order no. 6719 0010)
1 protective cap.

| Order No. | 6707 GRATTEC |
|---|---|
| 0005 | 21.20 (W554) |

## Maxi-triangular scraper EL 1601

**Design:** Set consisting of:
1 universal plastic handle EL 1000 GT with blade magazine
(order no. 6719 0010)
1 blade holder EL 0602 GT with length adjustment 6-125 mm
For all scrapers type T
(order no. 6719 0120)
1 HSS triangular scraper blade T60 with protective cap
(order no. 6719 0410)

**Application:** Sturdy triangular scraper for deburring difficult areas.

GRATTEC

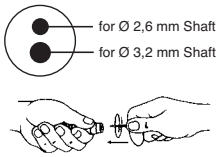
| Order No. | 6707 GRATTEC |
|---|---|
| 0010 | 25.40 (W554) |

## Softgrip deburrer set SG 1000

**Design:** Set consisting of:
1 robust, ergonomically shaped softgrip handle EL SG 3000 GT
with comfortable finger hollow and blade magazine
(order no. 6719 0020)
1 HSS-Plus blade B 10 S
(order no. 6719 0210)
1 HSS-Plus blade E 100S
(order no. 6719 0250)

**Application:** Due to the twin mount, all B-blades with a Ø 2.6 mm and all E-blades with a Ø 3.2 mm shank can be used.

**Note:** The Plus-blades are distinguished by a long tool life and suitability for stainless steels.



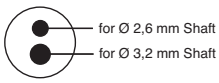
GRATTEC

| Order No. | 6708 GRATTEC |
|---|---|
| 0010 | 16.10 (W554) |

## Softgrip deburring countersinks set SG 1500

**Design:** Set consisting of:
1 robust, ergonomically shaped softgrip handle EL SG 3000 GT
with comfortable finger hollow and blade magazine
(order no. 6719 0020)
1 HSS crank countersink head BC 1650 Ø 3.2 mm, outer Ø 16.5 mm
(order no. 6719 0500)

**Application:** Due to the twin mount, all B-blades with a Ø 2.6 mm and all E-blades with a Ø 3.2 mm shank can be used. By connecting with the countersunk head, faster countersinking and chamfering with less fatigue is enabled for drill holes up to Ø 16.5 mm.



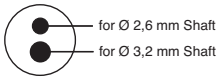
GRATTEC

| Order No. | 6709 GRATTEC |
|---|---|
| 0010 | 32.80 (W554) |

## Softgrip chamfering tool set SG 1100

**Design:** Set consisting of:
1 robust, ergonomically shaped softgrip handle EL SG 3000 GT
with comfortable finger hollow and blade magazine
(order no. 6719 0020)
1 HSS crank countersink bell EX 2000 Ø 3.2 mm, outer Ø 4-18 mm
(order no. 6719 0510)

**Application:** Due to the twin mount, all B-blades with a Ø 2.6 mm and all E-blades with a Ø 3.2 mm shank can be used. Deburring and chamfering of round material up to Ø 18 mm are enabled by connecting with the deburring bell.



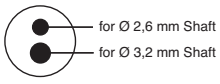
GRATTEC

| Order No. | 6710 GRATTEC |
|---|---|
| 0010 | 26.80 (W554) |

## Softgrip piercing deburrer set SG 1200

**Design:** Set consisting of:
1 robust, ergonomically shaped softgrip handle EL SG 3000 GT with comfortable finger hollow and blade magazine (order no. 6719 0020)
1 HSS crank piercing deburrer BO 1000 Ø 3.2 mm (order no. 6719 0300)

**Application:** Due to the twin mount, all B-blades with a Ø 2.6 mm and all E-blades with a Ø 3.2 mm shank can be used. Inner piercings and slots for o-rings as well as securing rings can easily be deburred by connecting with the crank piercing deburrer.



GRATTEC

| Order No. | 6711 GRATTEC |
|---|---|
| 0010 | 21.80 (W554) |

## Double sheet deburrer tool set DB 2000

**Design:** Set consisting of:
1 sturdy plastic handle with hand protection
2 round HSS cutting discs N 80 (order no. 6719 0600)

**Application:** The blade runs along the full length on both sides. This allows sheets and bars up to 12 mm in thickness to be deburred on both sides at the same time. For stainless steel sheets corresponding cutting discs N 80 M 42 (Order No. 6719 0610) are available.

GRATTEC

| Order No. | 6712 GRATTEC |
|---|---|
| 0010 | 23.80 (W554) |

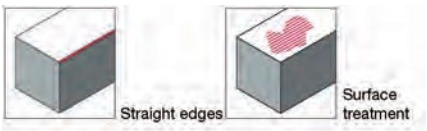
## Keramicut deburrer

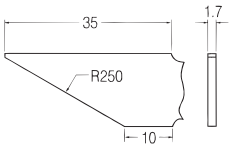
**Design:** Keramicut deburrers are the perfect tool for deburring problems with plastic and light metal workpieces. This results in the following advantages:

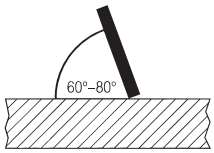
1. Due to the extra hard ceramic blade, plastics and other soft materials are easily deburred.
2. Due to the wear-resistant and sturdy ceramic blade, the tool has a long service life.
3. Damage-free work without rejects is possible due to the spherical blade (r = 250 mm).
4. There is no risk of injury due to the blunt 90° blade angle.

**Application:** For on-the-spot removal of materials on plastic and light metal workpieces. Position the blade on the area for deburring at an angle of 60–80° and draw over the workpiece in a continual motion. Do not apply excessive pressure.

GRATTEC







**6713** Robust, ergonomically shaped softgrip handle with comfortable finger hollow and fixed ceramic blade.

**6700** Oval plastic grip with replaceable ceramic blade CR 2200.

Ceramic blade CR 2200

## Softgrip set SG 2000/SG 2001

**Design:** Robust, ergonomically shaped softgrip handle with comfortable finger hollow and blade magazine. The Plus-blades are distinguished by a long tool life and suitability for stainless steels.

for Ø 2,6 mm Shaft
for Ø 3,2 mm Shaft

**Application:** Due to the twin mount, all B-blades with a Ø 2.6 mm and all E-blades with a Ø 3.2 mm shank can be used. The deburring tool is suitable for all fine, medium and the hardest deburring work.

| Order No. | Set contents | | 6718 GRATTEC |
|---|---|---|---|
| 0010 | 1 Soft handle EL SG 3000GT | (order no. 6719 0020) | 41.70 |

(W554)

## Universal deburrer set

**Design:** With sturdy handles. Scope of supply:

for Ø 3,2 mm Shaft

Red: HSS blade GT-E 200 for casting and brass.
Yellow: HSS blade E 150 for plastics. Particularly suitable for fine deburring work.
Blue: HSS-Co blade E 100 S for steel, stainless steel and aluminium.

## Reverse deburrer RC 1000/RC 2000/RC 2200

**Design:** Sturdy, round aluminium handle with hexagon wrench to change the blade in the hollow handle. The pivoting HSS blades cut both sides and can be replaced.

**Application:** By pressing the back button, the blade pivots in the shank and the tool can be guided through the hole (see diagram).

GRATTEC

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Hand reamer

**Design:** HSS, DIN 206-B, with approx. 7° left spirals and long, conical point (approx. 1/3 of cutting length). The uneven tooth pitch ensure chatter-free and accurate drilling. With cylinder shank with square drive. Bright surface

**Application:** Perfectly suited for single production or repair work, only for reaming through-holes. Not suitable for machining blind holes due to the long, conical point geometry. Also suitable for holes with interrupted cut. Particularly suitable for steel materials up to 500 N/mm² in strength e.g. general construction steels, steel materials up to 900 N/mm² in strength such as machine steels, tempered steels, tool steels, case-hardening steels, casting materials and non-ferrous metals such as aluminium, brass, copper and bronzes.

**Note:** Tap wrenches for manual actuation - see 1/223.

for mounting hand reamers.

## Hand reamer, adjustable

HSS | DIN 859 | Form B

approx. 7°

BECK MAPAL GROUP

**Design:** HSS, DIN 859, form B, with cylinder shank and square drive.
The uneven tooth pitch ensure chatter-free and accurate drilling. The body of the reamer is slotted, the nominal Ø can be increased to approx. 1/100 by turning the head screw in. The setting should be made using a ring gauge ( order no. 4411). All required adaptations can be set and wear compensated. Reamers are set to the nominal size.
Store depressurised.
The Ø 4 and 5 mm are straight fluted, spiral fluted from Ø 6 mm (left spiral 7°).

**Application:** Perfectly suited for single production or repair work, only for reaming through-holes. Not suitable for machining blind holes due to the conical point geometry and head screw. Also suitable for holes with interrupted cut. Particularly suitable for steel materials up to 500 N/mm² in strength e.g. general construction steels, steel materials up to 900 N/mm² in strength such as machine steels, tempered steels, tool steels, case-hardening steels, casting materials and non-ferrous metals such as aluminium, brass, copper and bronzes.

**Note:** The hand reamer is sensitive to impacts and chips should therefore not be knocked out, but blown or washed out. Tap wrenches for manual actuation see 📖 1/223.

## Limit plug gauge

for testing drilled holes.

HELIOS·PREISSER

📖 4/72

## Hand reamer, quick adjustment

**Design:** Right cutting, with replaceable blades made of HSS, factory standard and cylinder shank with square drive. The uneven blade pitch ensure chatter-free and accurate drilling. The reamer can be progressively set within the stated adjustment range. The setting should be made using a ring gauge (order no. 4411). Bright surface.

**Application:** Particularly suitable for repair work. Only for reaming through-holes. Not suitable for machining blind holes due to the head screw. Particularly suitable for steel materials up to 500 N/mm² in strength e.g. general construction steels, steel materials up to 900 N/mm² in strength such as machine steels, tempered steels, tool steels, case-hardening steels, casting materials and non-ferrous metals such as aluminium, brass, copper and bronzes.

**Note:** Tap wrenches for manual actuation – see 1/223.

## Hand cone reamer

**Design:** HSS, DIN 9-B with left spiral approx. 7°. The uneven tooth pitch ensure chatter-free and accurate drilling. With cylinder shank with square drive. Bright surface

**Application:** For reaming conical holes for taper pins according to DIN 1, DIN 258, DIN 1447, DIN 7977 and DIN 7978. Perfectly suited for single production or repair work. Also suitable for holes with interrupted cut. Pre-drill with a cylindrical spiral drill or pin drill.
Particularly suitable for steels up to 500 N/mm² in strength such as non-ferrous metals, plastics, steels up to 1000 N/mm² amd casting materials.

**Note:** Tap wrenches for manual actuation – see 1/223.

## NC machine reamer

**Design:** HSS-E, dimensions similar to 212. Centring up to Ø 3.70 mm on both sides with 90° full point, above with inner centring, with straight shank Ø for standardised mounting in hydraulic expansion chucks and high accuracy chucks. The clamping accuracy is significantly improved due to the narrow tolerance of the shanks. With cylinder shank, tolerance h6. Bright surface.

Reamer manufacturing tolerances:
– full diameter and 1/10 mm dimensions H7,
– 1/100 mm dimensions of Ø 1.01 to 5.03 mm 0.00/+0.004 mm, over Ø 5.03 mm 0.00/+0.005 mm.

**Application:** For reaming through holes, because of the short trim cut (from 3.8 mm) conditionally suitable for reaming blind holes.

## NC machine reamer

NEW

**Design:** HSS-E, dimensions similar to 212. Centring up to Ø 3.70 mm on both sides with 90° full point, above with inner centring, with straight shank Ø for standardised mounting in hydraulic expansion chucks and high accuracy chucks. The clamping accuracy is significantly improved due to the narrow tolerance of the shanks. With cylinder shank, tolerance h6. Bright surface.

HSS | Factory standard | H7

BECK MAPAL GROUP

Reamer manufacturing tolerances:
– full diameter and 1/10 mm dimensions H7,
– 1/100 mm dimensions of Ø 1.01 to 5.03 mm 0.00/+0.004 mm, over Ø 5.03 mm 0.00/+0.005 mm.

**Application:** For reaming through holes, because of the short trim cut (from 3.8 mm) conditionally suitable for reaming blind holes.

## Carbide machine reamer

**Design:** Solid carbide up to nominal Ø 9.0 mm, carbide (K10) from nominal Ø 10.0 mm DIN 8093, with approx. 7° left spirals, with long cutting section, short point and uneven tooth pitch. This achieves clean and exact drilling.
With cylinder shank Tolerance h7. Bright surface.

Carbide | DIN 8093 | H7 | approx. 7°

format professional quality

**Application:** For reaming through-holes and also suitable for reaming blind holes due to the short point. Particularly suitable for high alloy and annealed steels up to 52 HRC, casting materials and soft non-ferrous metals such as aluminium and brass.

## High performance reamer HNC for through-hole

**Design:** High performance reamer HNC with internal cooling for through-hole with special HPC cutting geometry, right cutting, twist fluted, EU pitch, for mounting in hydraulic expansion chucks, shrink chucks and high accuracy chucks. TiAlN coated surface Full Ø fit H7, hundredth Ø tolerance +0.004/0.

**Application:** For reaming through holes. Particularly suitable for high alloy and steels as well as casting materials.

## Hand tap set

**Design:** HSS, DIN 2184, type N, bright surface.
3 piece set consisting of roughing tap with point form A (6–8 threads), second tap with point form D (3.5–5 threads) and finish tap with point form C (2–3 threads).

**Application:** For Whitworth threads according to DIN 11. Particularly suitable for high strength materials up to 1200 N/mm² in strength and rust-free and acid-resistant steels.

## Cutting tap 1/4" bit

**Design:** Tap bit, 1/4" hexagon mount for metric ISO thread according to DIN 13.

**Application:** Cutting tap bits are designed for thread drilling with cordless screw drills and handheld drills with left and right motion. However, they are also suitable for drilling by hand and on stationary drilling machines. Your cordless screw drill should have a minimum power of 7.5 Volt. Make sure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil.
rpm: lowest settings (0–450 $min^{-1}$),
torque: maximum setting.

## Combi-bit 1/4"

**Design:** HSS, bright surface. With 1/4" hexagon shank

**Application:** For drilling core holes, thread drilling and deburring in one step, for regular metric threads according to ISO DIN 13.
Combi-bits are designed for thread drilling with cordless drills and handheld drills with left and right motion. However, they are also suitable for drilling by hand and on stationary drilling machines. Only through-holes with up to a maximum thread depth of 1 x D can be produced. Particularly suitable for assembly work and small batches. Make sure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil (order no. 9829).

# ALL-ROUNDER AT YOUR SIDE

**Unbeatable – three tools in one.** This team player saves space, time and money: It is always the winning combination when out on the road, as the FORMAT Combi-Bit allows core hole drilling, tapping and deburring in one step.
The advantages of this combination speak for themselves in the long run - reduced set-up time and up to 50 percent longer service life. Also the risk of fracture is much lower.
The heat-treated induction zone makes this tool perfect, as it allows for greater bend and elasticity.
Proven FORMAT quality meets technical innovation: this all-rounder leaves no prayers unanswered for professional use.
**Time is precious.**

Combi-bit SGE 1/4" (order no. 1656 0001, 📖 1/178, 6/156)

**3 IN 1 TOOL**

## Combi-bit 1/4"

**Design:** With cross-grinding and 1/4" hexagon shank.

**Application:** For drilling core holes, thread drilling and deburring in 1 step. The heat-treated induction zone allows for increased bending elasticity, thus significantly reducing the risk of fracture, thereby up to **50% higher** life. Combi-bits are designed for thread drilling with cordless drills and handheld drills with left and right motion. However, they are also suitable for drilling by hand and on stationary drilling machines. Material thickness not more than nominal thread Ø (M6 = 6 mm material thickness). Particularly suitable for assembly work and small batches. Make sure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil (Order No. 9829).

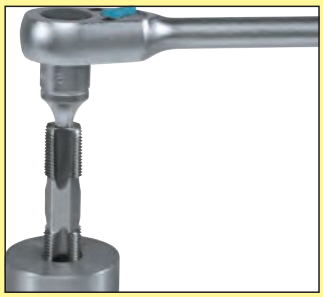
Threading tool assortment **HexTap**

**Application:**
for general use
- Easy to machine materials up to 900 N/mm²
- Non-alloyed and low alloy steels
- For through-holes and blind holes
- For manual use

**Benefits:**
- Pilot pins for accurately aligned fixing
- Roughing and finish tap in one tool
- Use for difficult to access areas
- For producing new threads
- For drilling and repairing damaged threads



## Cutting tap bit HexTap S

**Design:** Tap bit, 1/4" hexagonal mount for pipe threads according to DIN ISO 228.

**Application:** Cutting tap bits are designed for thread drilling with cordless screw drills and handheld drills with left and right motion. However, they are also suitable for drilling by hand and on stationary drilling machines. Your cordless screw drill should have a minimum power of 7.5 Volt. Make sure that the tool axis and hole axis are precisely aligned and use appropriate cutting oil.

## V-COIL thread repair set

**Drilling:** Bore out damaged thread with normal spiral drills. Boring out is not required for spark plug threads - the combined drilling and cutting tool should be used. Please note that larger holes are required for thread formers.

**Check:** Check the tap and thread bolt for the same thread and gradient.

**Thread:** Cut the mounting thread in the bored out hole with the special V-COIL taps. The use of cutting oil is recommended.

**Installing the thread insert:** Place the insert on the tool and make sure that the carrier pin is in the slot opening and then make the right setting with the adjustment ring. Then turn in the thread insert in the thread direction applying light pressure.
**Do not turn against the running direction,** as the pin can break off.

**Breaking the pin:** After installation, take the insertion tool out and remove the carrier pin with the pin breaker. The pin should be removed with long nose pliers for larger dimensions and spark plug threads. After completing these steps, a thread is produced that is often better and stronger than the original thread due to the narrow and exact tolerances as well as the spring thread forming.

Supplied in a plastic cassette up to M12, and in a metal cassette from M14.

**Application:** Thread armouring of materials with low shearing resistance e.g. aluminium and magnesium alloys, in mechanical engineering, in automobile, electro and medical technology and in aviation and aerospace. Thread repair of damaged or worn threads. Reject recovery.

## Blind hole machine tap

**Design:** DIN 371 or DIN 376, tolerance range ISO 2/6H, type N, with point form C (2–3 threads).

M2 –M10 DIN 371 with reinforced shank,
M12–M30 DIN 376 with overflow shank.

**Application:** For regular metric threads according to ISO DIN 13. Particularly suitable for universal materials such as construction steels, machining steels, case-hardening steels, tempered steels, nitriding steels and nodular graphite iron.

**1684** steam — HSS-E, steam tempered surface.

**1700** TiN — HSS-E, TiN coated surface.

**1674** TiN — HSS-E PM, TiN coated surface.

**Note:** HSS-E PM is distinguished by its high resilience (stronger edge stability, wear resistance) and a higher tool life. Advantages: Significantly higher process reliability, up to 1/3 longer life and better thread surface.

## Through-hole machine tap

**Design:** DIN 371 or DIN 376, tolerance range ISO 2/6H, type INOX, with spiral point form B (4-5 threads).

M2 –M10 DIN 371 with reinforced shank,
M12–M30 DIN 376 with overflow shank.

**Application:** For regular metric threads according to ISO DIN 13. Particularly suitable for rust/acid-resistant steels such as sulphured steels, austenitic steels, martensitic steels and ferritic steels.

## Through-hole machine tap

**Design:** HSS-E, DIN 371 or DIN 376, tolerance range ISO 2/6H, type H, with spiral point form B (4-5 threads).

M2 –M10 DIN 371 with reinforced shank,
M12–M24 DIN 376 with overflow shank.

**Application:** For regular metric threads according to ISO DIN 13. Particularly suitable for high strength steels such as tempered steels, alloyed cold work steels and high-speed steels.

## Blue and red: TANDEM taps

Two in one: The **taps with a blue and red coloured ring** allow machining of rust and acid-resistant steels as well as high-strength steels. They are universal geniuses that can sustainably reduce your tool costs. We can offer you these quality products from German production at an attractive price.
**Note:** Machine taps are found from 📖 1/199.

## Through-hole machine tap

**Design:** With chamfer form B (2-3 threads).

M3 –M10 DIN 371 with reinforced shank,
M12–M20 DIN 376 with overflow shank.

**Application:** Universal taps with a broad range of metric regulation thread according to DIN ISO 13.

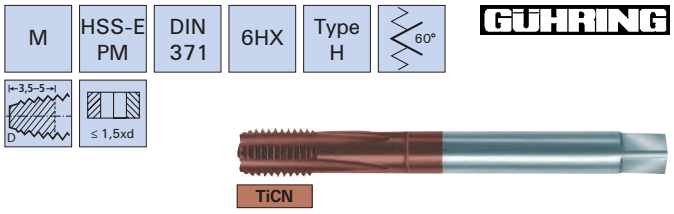
## Through-hole machine tap

**Design:** HSS-E PM, tolerance range 6HX, type H, with spiral point form D (6-7 threads).

**Application:** For regular metric threads according to ISO DIN 13. Particularly suitable for annealed steels up to 56 HRC.

**Note:** HSS-E PM is distinguished by its high resilience (stronger edge stability, wear resistance) and a higher tool life.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Through-hole machine tap, left thread

**Design:** HSS-E, tolerance range ISO 2/6H, type N, with spiral point form B (4-5 threads). Bright surface.

M3 –M10 DIN 371with reinforced shank,
M12–M20 DIN 376 with overflow shank.

**Application:** For metric left threads according to DIN ISO 13. Particularly suitable for general steels, construction steels, machining steels and case-hardening steels.

## Through-hole machine tap (nut tap)

**Design:** HSS-E, DIN 357, tolerance range ISO 2/6H, type N, extra long, the point length is approx. 21-23 threads. Bright surface

**Application:** For regular metric threads according to ISO DIN 13. Especially for thread cutting in hard to access areas. Particularly suitable for general steels, construction steels, machining steels and case-hardening steels.

## Through-hole machine tap

**Design:** HSS-E, DIN 374, tolerance range ISO 2/6H, type INOX, with spiral point form B (4-5 threads).

**Application:** For metric precision threads according to DIN ISO 13. Particularly suitable for rust/acid-resistant steels such as sulphured steels, austenitic steels, martensitic steels and ferritic steels.

## Blind hole machine tap

**Design:** HSS-E, DIN 2184-1, tolerance range 2B, type N, with point form C (2–3 threads).

UNC No. 4–40 to 3/8–16 with reinforced shank, UNC 7/16–14 to 7/8–9 with overflow shank.

**Application:** For UNC thread, unified coarse thread, ANSI B1.1. Particularly suitable for general steels, construction steels, machining steels, case-hardening steels and tempered steels.

## Machine thread former (with lubricating slots)

**Design:** HSS-E, DIN 371 or DIN 376, with feed length form C (2–3 threads).

M3 –M10 DIN 371 with reinforced shank,
M12–M16 DIN 376 with overflow shank.

**Application:** For regular metric threads according to ISO DIN 13. Particularly suitable for all forming materials such as construction steels, machining steels, case-hardening steels, cold work steels, hot work steels, nitriding steels and stainless steels, aluminium, al-alloys, copper, Cu-alloys, brass and bronzes.

## Machine thread former (with lubricating slots)

**Design:** HSS-E PM, DIN 371 or DIN 376, tolerance range 6HX, type INOX, with feed length form C (2–3 threads). TiN coated surface

M3 –M10 DIN 371 with reinforced shank,
M12–M16 DIN 376 with overflow shank.

**Application:** For regular metric threads according to ISO DIN 13. Particularly suitable for all forming materials such as construction steels, machining steels, case-hardening steels, cold work steels, hot work steels, nitriding steels and stainless steels, aluminium, al-alloys, copper, Cu-alloys, brass and bronzes.

**Note:** HSS-E PM is distinguished by its high resilience (stronger edge stability, wear resistance) and a higher tool life.

## Tool holder

**Design:** Chrome-plated full steel design, the ratchet can be changed over from left to right motion or with central locking. With annealed, parallel clamping jaws and adjustable cross handle.

**Application:** For clamping square shanks - particularly suitable for work in enclosed spaces due to the adjustable cross handle.

| Order No. | Square span mm | 1850 format | For Tap shanks according to DIN | For Tap shanks according to ISO | Total length mm |

## Die holder

**Design:** Housing large dimensions, turnbuckles according to DIN sizes.

**Application:** For directly mounting closed and slotted die stocks according to EN 22568 and EN 24801.

format professional quality

**1865** Housing die-cast alloy, grey hammered coating, handles from size 20 x 5 mm made of galvanised, rust protected machine steel. Can be unscrewed from size 45 x 14.

**1867** Body made of powder metal and painted, handles steam tempered, nitrated and polished.

DIN 250

## Tap extractor

**Design:** Very durable tool with spring tempered and adjustable fingers. The guide sleeve can be moved lengthways and therefore takes very high torsion forces.

**Application:** For loosening and unscrewing broken taps with 3 slots (order no. 1852) or 4 slots (order no. 1848). The fingers are inserted into the slots on the broken tap and secured with the guide bush by sliding the upper retainer ring. The broken off tap piece is moved back and forth with a tap wrench until it loosens and can be screwed out.

WALTON COMPANY

**1852** For 3-slot tap.

**1848** For 4-slot tap.

## Tap borer

**Design:** Solid carbide, type N. The Tap borer has 3 blades.

**Application:** Extraction must take place dry at ca. 1500–3500 rpm. With use of the right tap bore-out tool, the core of the tap is quickly bored out and the rest of the tap can be cleanly blown out of the drill hole. The workpiece must be clamped very steadily so that movement does not happen at higher speeds. A centring must be produced first by starting the tap bore-out tool up several times if the tap has broken off at an angle. Boring out can only be started now. Furthermore, the chips should be removed by "air blow" several times.
A vibration can be felt just before the end of the bore-out process. The extractor should now be removed.
The new thread can then be cut with a tap. Due to the high stresses caused by boring out, the cutting edges of the tap bore-out tool need to be resharpened from time to time.

## Solid carbide thread milling cutter TM SP for inner thread

**Design:** Ultra-finest grain-solid carbide, with internal supply of coolant and 27° right spiral slots to achieve optimum cutting conditions. The milling principle results in an exact thread depth, a very high surface quality in the thread, process-reliable machining of difficult to cut materials and thread production very close down to the base.

**Application:** For regular metric threads (both right and left thread) according to ISO DIN 13 for through-holes and blind holes.

**Note:** Solid carbide thread milling cutter for additional thread types (UNC, UNF, pipe thread etc.) on request. You will further information in the technical appendix.

## Solid carbide thread milling cutter GFM for inner thread

**Design:** Ultra-finest grain-solid carbide, with internal supply of coolant and 15° right spiral slots to achieve optimum cutting conditions. The milling principle results in an exact thread depth, a very high surface quality in the thread, process-reliable machining of difficult to cut materials and thread production very close down to the base. Larger Ø ranges can also be processed under consideration of the thread gradient.

**Application:** For regular metric threads (both right and left thread) according to ISO DIN 13 for through-holes and blind holes.

**Note:** Solid carbide thread milling cutter for additional thread types (UNC, UNF, pipe thread etc.) on request. You will further information in the technical appendix.

## Solid carbide thread milling cutter DTMC-SP for inner thread

**Design:** Ultra-finest grain-solid carbide, with 27° right spiral slots to achieve optimum cutting conditions as well as with 45° countersink bevel. The milling principle results in an exact thread depth, a very high surface quality in the thread, process-reliable machining of difficult to cut materials and thread production very close down to the base.

**Application:** For drilling, countersinking and thread cutting with a single tool. For regular metric threads (both right and left thread) according to ISO DIN 13 for through-holes and blind holes.

**Note:** Solid carbide tap milling cutter for additional thread types (UNC, UNF, pipe thread etc.) on request. You will further information in the technical appendix.

| | 2 | 0.003 |
| | 2 | 0.003 |
| | 2 | 0.003 |
| | 2 | 0.003 |
| | 2 | 0.003 |
| | 2 | 0.007 |
| | etc. | etc. |

The stated feed values relate to the groove cutters.

## Surface finishing

Tools made of high speed steel or carbide because of their generally good basic properties are supplied with a bright finish without extra surface treatment. For special applications it is recommended that tools are optimised for diverse applications at surface finishing processes, to achieve the following goals:

**– Extension of the tool's life**

**– Reduced cutting force**

**– Increased cutting speed and feed rate**

**– Improved surface finish**

**– Improved dry processing**

**– Optimised hard processing**

### Surface finishing benefits at a glance

| | |
|---|---|
| TiN | Wear- and diffusion resistance |
| TiCN | Hardness, toughness |
| TiAlN | Heat hardness, oxidation stability |
| Fire | Hardness, toughness, wear resistance |
| Steam tempered | Lower slippage resistance |
| Nitrated | Hardness, wear resistance on cast iron |
| Signum | Extreme hardness, extreme heat resistance |
| ZrN | High hardness, low friction coefficient |

### Titanium-nitride coating — TiN

Titanium-nitride is a gold-coloured protective layer applied by a PVD process (Physical Vapour Deposition). Higher hardness combined with a lower friction coefficient achieves a significantly longer service life and improved cutting performance. TiN coating is primarily used for drills and thread bores.

### Titanium carbon-nitride coating — TiCN

Titanium carbon-nitride is a wear-protection layer applied by PVD, being harder than TiN and having a lower friction coefficient. Tool performance is increased through greater hardness and ductility combined with improved wear.
The TiCN coating is primarily used for NC drill bits, thread bores and end mills.

### Titaninum aluminium-nitride coating — TiAlN

Titanium aluminium-nitride is a multi-layer ceramic coating applied using the PVD method. The resulting greater hardness and oxidation stability make this coating ideal for higher speeds and feed rates for extended tool life.
The TiAlN coating is used mainly in drilling and milling machine processes, and is also recommended for dry processing.

### Titaninum aluminium-nitride S coating — TiAlN-S

This coating is particularly recommended for machining hardened materials (> 70 HRC). It is used mainly for end mills and is characterised by high wear resistance. Dry machining is also possible as is HSC machining.

### Diamond coating — Diamond

This coating is particularly suitable for the processing of reinforced plastics, aluminum and copper alloys.
The friction coefficient on steel is very low.

### Fire coating (TiAlN/TiN) — Fire

Fire is a TiAlN/TiN multi-layer coating with a gradient structure. The combined benefits of TiAlN and TiN coatings are very good wear resistance with high thermal stability, hardness and toughness. In addition to the conventional wet application, this layer can also be used for minimum quantity lubrication and dry machining.

### Zirconium nitride coating — ZrN

Zirconium-nitride is suitable for machining non-ferrous materials, and especially for aluminum alloys. This coating is not good for cold welding of aluminium. Associated with high layer hardness and oxidation resistance are advantages that increase tool service life and effective feed rate and cutting speed.

### Steam tempering — Steam tempered

Steam tempering is a form of surface processing which reduces slide resistance and prevents edge build-up. Cold welding can also be avoided.
Steam tempering is primarily used with drills and thread bores.

### Nitriding — Nitrated

Nitriding is a surface machining process that increases hardness and wear resistance. Particularly for working with highly abrasive materials such as cast iron, which nitriding is particularly suitable for.
Nitriding is primarily used with drills and thread bores.

### Signum coating (TiALN/SiN) — Signum

Due to the special nano-composite structure with a protective layer of TiALN and SiN, this coating, with 5500 HV, is one of the hardest on the market. Particularly for hard machinability materials. High heat wear resistance combined with high diffusion resistance.

## Surface finishing processes compared

| Surface Finish | Colour | Coating structure | Thickness µm | Hardness HV | Friction coefficient versus steel temperature | Application |
|---|---|---|---|---|---|---|
| TiN | gold-yellow | single-layer | 1 –4 | 2300 | 0.50 | max. 600° |
| TiCN | light brown | multi-layer | 1 –4 | 3000 | 0.40 | max. 400° |
| TiAlN | violet | multi-layer | 3 | 3200 | 0.55 | max. 750° |
| TiAlN-S | blue | multi-layer | 0.5–4 | 4500 | 0.45 | max. 1200° |
| Diamond | black | – | 0.5–2 | 5000 | 0.15 | max. 350° |
| Fire | red | multi-layer | 2 –6 | 3300 | 0.60 | max. 850° |
| ZrN | light-gold | multi-layer | 0.1–3 | 3400 | 0.50 | max. 900° |
| Steam tempered | grey | surface treatment | max. 5 | 400 | – | max. 550° |
| Nitrated | silver-grey | surface treatment | 20 | 1300 | – | max. 550° |
| Signum | red-bronze | multi-layer | 1 –5 | 5500 | 0.55 | max. 800° |

## End mill

**Design:** HSS-E PM, type N, DIN 844-K, 30°, **TiAlN-coated,** with centre cut.

**HSS-E PM has outstanding durability (greater edge stability, more wear-resistant) and a longer tool life.**

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral and end milling.

## Fine Pitch Rippa Cutters

**Design:** HSS-E PM, Type HR, DIN 844-K, 30°. With centre cut, suitable for drilling. **TiAlN-coated.**

**HSS-E PM has outstanding durability (greater edge stability, more wear-resistant) and a longer tool life.**

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling and drill cutting.

## Dovetail Cutters

**Design:** HSS-E, type N, bright.

**Application:** Can be used for milling dovetail guides with an angle tolerance of α ± 15'.

**2256** Bright — DIN 1833 C, 45°.

**2257** Bright — DIN 1833 C, 60°.

**2258** Bright — DIN 1833 D, 45°.

**2259** Bright — DIN 1833 D, 60°.

# GÜHRING

**Under the PREMIUM trade tools umbrella is the ultra-efficient combination of synergies, quality assurance and guaranteed service delivery.**

**Use the service and dedication of PREMIUM Partners together with GÜHRING.**

Good reasons for choosing **Gühring:**

- Unique hard-metal technology
- Unique coating technology
- Unique finishing technology
- Unique research & development on geometry, coatings and cutting materials
- 700 field technicians for applications
- Production & service centres close to customers on all continents

➤ Unique quality, customer-friendly service and one of the biggest tool programmes with 90,000 items from a single source!

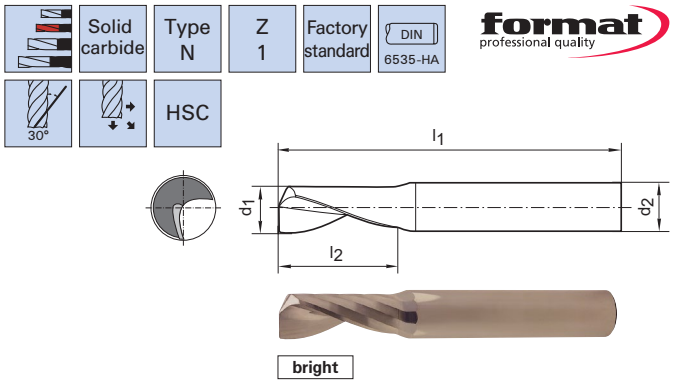
## Solid Carbide Single Flute Router

**Design:** Solid carbide, type N, according to factory standard, 30°, bright, with 1 cutting edge. Flute finest cut (mirror cut).

**Application:** Suitable for contour and plunge milling as well as milling out slots and notches on windows, doors and other profiles made of aluminium and plastic. Also suitable for other non-ferrous metals under certain conditions.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide 2 Flute Slot Drill for Aluminium

**Design:** Solid carbide (K10/K20), type W, according to factory standard, 25°, bright, offset shank, with centre cut. Polish grinding, stable cutting edges.

**Application:** Can be used for milling keyways and feather key grooves as well as for trimming and finishing milling. Besides the main use with machining aluminium, it is suitable for working with plastic.

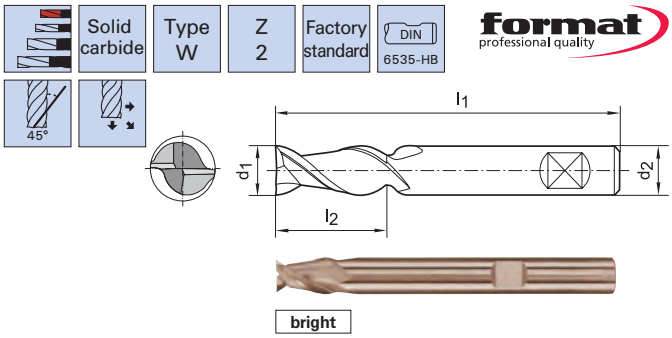
## Solid Carbide 2 Flute Slot Drill for Aluminium

**Design:** Solid carbide (K10/K20), type W, according to factory standard, 45°, with centre cut.

**Application:** Can be used for peripheral milling and drill cutting. The 45° spiral results in a soft and peeling cut and thus a high surface quality. Burr formation on the cutting edges is avoided. Particularly suitable for machining aluminium.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide 2 Flute Slot Drills

**Design:** Solid carbide (K10/K20), type N, DIN 6527, 30°, with centre cut.

**Application:** Can be used for milling keyways and feather key grooves P9 as well as for universal machining.

## Solid Carbide 3 Flute Mini Slot Drills

**Design:** Ultra-fine grit solid carbide, 45°, **fire-coated.**

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible. Air cooling recommended.**

**Application:** Can be used for milling keyways and feather key grooves as well as for universal machining. Feed is approx. 50% higher than with a 2-edged cutter.
The 45° spiral results in a soft and peeling cut and thus a high surface quality. Burr formation on the cutting edges is avoided.

## Solid carbide rough mill for aluminium

NEW

**Design:** Solid carbide, factory standard, with centre cut. Surface polished.

**Application:** For the machining of aluminium, aluminium alloys, short- and long-chipping brass. For many applications, the complete milling process can be covered with one miller.

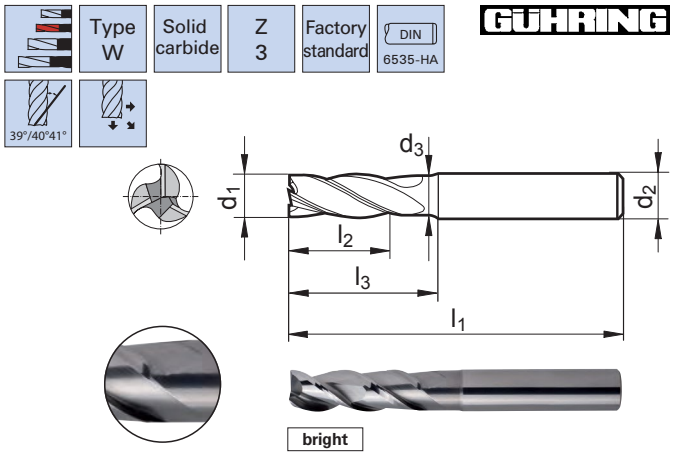
## Solid carbide roughing cutter for aluminium 3 x D

NEW

GÜHRING

**Design:** Solid carbide, factory standard, bright, core fissure, nano-polished cutting edges, with centre cut. Surface polished.

**Application:** For the machining of aluminium, aluminium alloys, short- and long-chipping brass.
Tools with a cutting length of 3 x D are core reinforced and are suitable for keyway/roughing of $a_p = 1 \times D$, HPC-roughing and smoothing over the entire cutting length.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

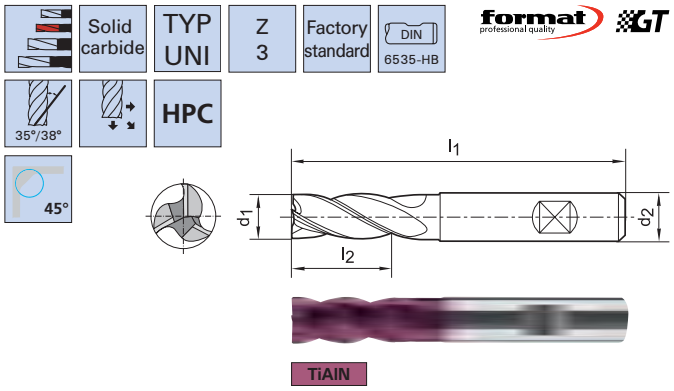
## Solid carbide high performance cutter FORMAT GT, UNI

NEW

**Design:** Solid carbide, type UNI, according to factory standard, TiAlN-coated, unevenly twisted and unevenly pitched, cutting tips with 45° cutting corner chamfer, extended flutes.

**Application:** Universally applicable for roughing and smoothing, for large cutting depths with utmost machining performance at very regular run. **The dynamic rotation allows HPC application with increased cutting values at ideal chipping values.**



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid carbide high performance cutter FORMAT GT, INOX

NEW

**Design:** Solid carbide, type INOX, DIN 6527, TiAlN-coated, unevenly twisted and unevenly pitched, cutting tips with 45° cutting corner chamfer, extended flutes.

**Application:** For INOX and titanium materials, for roughing and smoothing, for large cutting depths with utmost machining performance at very regular run and soft cut. **The dynamic rotation allows HPC application with increased cutting values at ideal chipping values.**

| 0010 | 4; 5; 6; 8; 10; 12 (order no. 2348) | 156.50 (W212) |

## Solid Carbide 3 Flute Slot Drill

**Design:** Type NH, DIN 6527, 45°, with centre cut.

**Application:** Can be used for universal machining. Feed is approx. 50% higher than with a 2-edged cutter. The 45° spiral results in a soft and peeling cut and thus a high surface quality. Burr formation on the cutting edges is avoided.

## Solid Carbide Hi-Helix 3 Flute Slot Drill

**Design:** Solid carbide (K10/K20), type NH, DIN 6527, 45°, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for universal machining. Feed is approx. 50% higher than with a 2-edged cutter. The 45° spiral results in a soft and peeling cut and thus a high surface quality. Burr formation on the cutting edges is avoided.

## Solid Carbide Vari-Helix 3 Flute Slot Drill

**Design:** Ultra-fine grit solid carbide, type NH, DIN 6527, 41°/43°/45°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling as well as for universal machining. Can be used for rough grinding, slot cutting and finishing milling. The irregular spiral lead 41°/43°/45° results in particularly smooth running and thus extremely good workpiece surface quality for finishing milling operations. In addition, feeds higher by up to 60% can be realized for slot cutting and rough milling. A much longer tool life is achieved than with conventional tools. The 3-edged cutter has a larger gullet and can thus also be used for very large cutting depths.

## Solid Carbide Hi-Helix End Mills

**Design:** Ultra-fine grit solid carbide, type H, according to factory standard, 50°, **TiAlN-coated,** with centre cut.

**Application:** For slot cutting and for universal machining. Also suitable for trimming and finishing milling. Feed is approx. 50% higher than with a 2-edged cutter. The extremely high spiral lead results in particularly smooth running and thus low deviation in shape and a very good surface on the workpiece. Particularly suitable for **VA machining**.

## Solid carbide high performance cutter FORMAT GT, UNI

NEW

**Design:** Solid carbide, type UNI, according to factory standard, TiAlN-coated, unevenly twisted and unevenly pitched, cutting tips with 45° corner cutting chamfer.

**Application:** Universally applicable for roughing and smoothing, with utmost machining performance at very regular run. **The dynamic rotation allows HPC application with increased cutting values at ideal chipping values.**

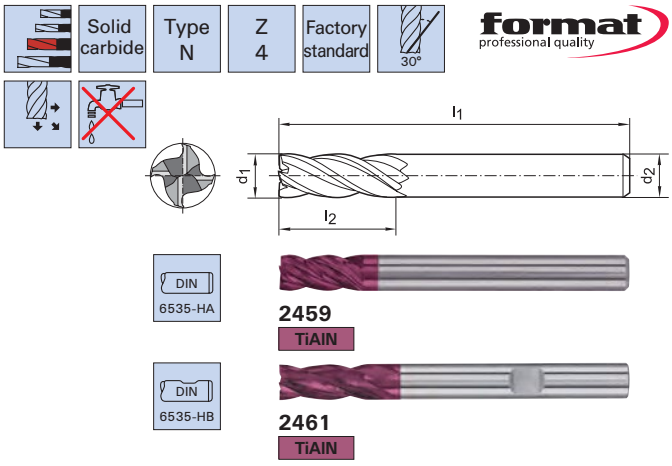
## Solid Carbide 4 Flute End Mill

**Design:** Solid carbide (K10/K20), type N, according to factory standard, with irregular pitch, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling and drill cutting. The irregular pitch results in low-vibration running and thus a high surface quality. Burr formation on the cutting edges is avoided.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide Vari-Helix 4 Flute Endmill

**Design:** Ultra-fine grit solid carbide, type NH, DIN 6527, 40/42°, **fire-coated,** with centre cut.

**Application:** Can be used for peripheral milling as well as for universal machining. **For milling depths up to 2 x D.** Can also be used for trimming and finishing milling. Can be used for rough grinding, slot cutting and finishing milling. The irregular spiral lead 36°/38° results in particularly smooth running and thus very good surface on the workpiece. A much longer tool life is achieved than with conventional tools.

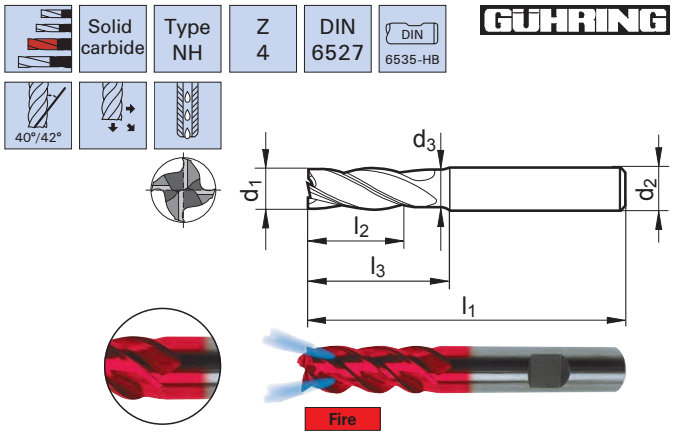
## Solid Carbide Vari-Helix 4 Flute End Mill with Through Coolant

**Design:** Ultra-fine grit solid carbide, type NH, DIN 6527, 40/42°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**With inner cooling: Increase in tool life of up to 50%, since chip blockage is reduced.**

**Application:** Can be used for peripheral milling as well as for universal machining. **For milling depths up to 2 x D.** Can also be used for trimming and finishing milling. Can be used for rough grinding, slot cutting and finishing milling. The irregular spiral lead 40°/42° results in particularly smooth running and thus very good surface on the workpiece. A much longer tool life is achieved than with conventional tools.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid carbide end mill with 35°/38° spiral lead

**Design:** Ultra-fine grit solid carbide, type N, DIN 6527, 35°/38°, with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible. Air cooling recommended.**

**Application:** Can be used for peripheral milling as well as for universal machining. **For milling depths up to 2 x D.** Can also be used for trimming and finishing milling. Can be used for rough grinding, slot cutting and finishing milling. The irregular spiral lead 35°/38° results in particularly smooth running and thus very good surface on the workpiece. A much longer tool life is achieved than with conventional tools, as well as maximum stability during machining. In addition, feeds higher by up to 60% can be realized.

## Solid Carbide Vari-Helix 4 Flute End Mills

**Design:** Ultra-fine grit solid carbide, type NH, DIN 6527, 36/38°, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling as well as for universal machining. Can be used for rough grinding, slot cutting and finishing milling. The irregular spiral lead 36°/38° results in particularly smooth running and thus extremely good workpiece surface quality for finishing milling operations. In addition, feeds higher by up to 60% can be realized for slot cutting and rough milling. A much longer tool life is achieved than with conventional tools.

## Solid Carbide Necked Var-Helix 4 Flute End Mill

**Design:** Solid carbide, type N, DIN 6527L, 35°/38°, **Signum-coated,** with centre cut.

**Application:** Can be used for grooving, ramping (up to 45°), roughing, smoothing and drilling with high speeds with one tool in various materials.

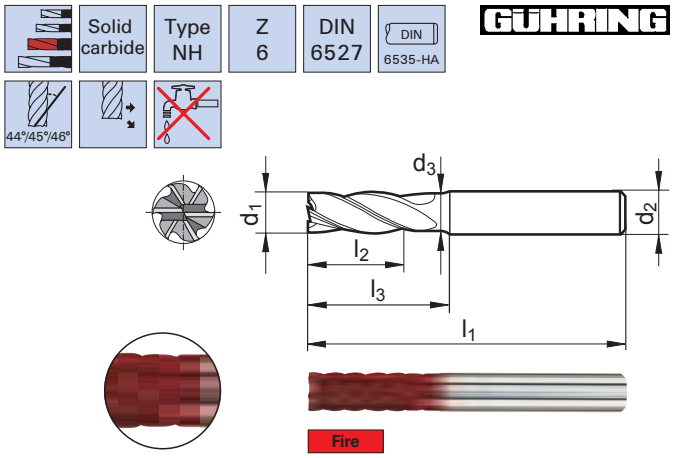
## Solid Carbide Multi-Flute Vari-Helix End Mill

**Design:** Ultra-fine grit solid carbide, type NH, DIN 6527, 44°/45°/46°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling as well as for universal machining. Can also be used for trimming and finishing milling. Can be used for rough grinding and finishing milling. The irregular spiral lead 44°/45°/46° results in particularly smooth running and thus very good surface on the workpiece. A much longer tool life is achieved than with conventional tools.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

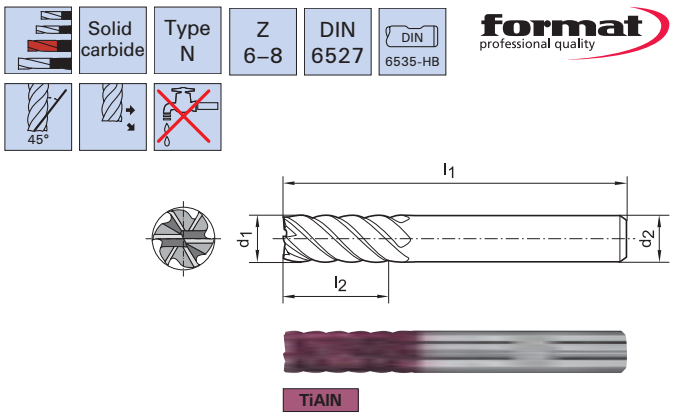
## Solid carbide end mill

**Design:** Ultra-fine grit solid carbide, type N, according to factory standard, 45°, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling, trimming and high-precision finishing. The 45° spiral results in a soft and peeling cut and thus a high surface quality. Burr formation on the cutting edges is avoided. Particularly suitable for **machining stainless steel**.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

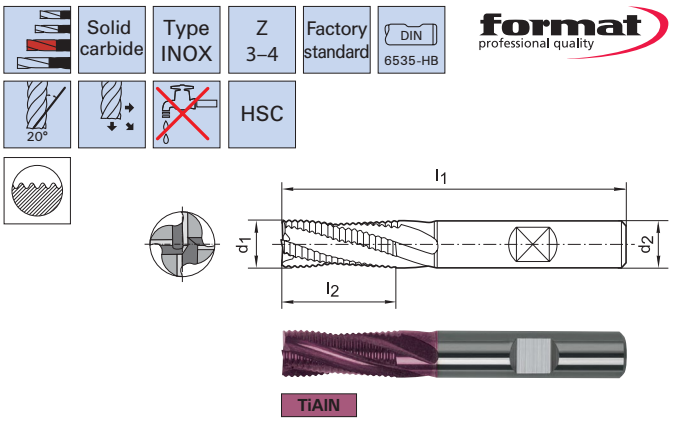
## Solid Carbide Rippa Cutter for Hard Machining

**Design:** Ultra-fine grit solid carbide, type HR, according to factory standard, 20°, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for rough milling. The fine cord toothing produces small chips which are easy to remove. This improves tool life and achieves a better surface finish.
Particularly suitable for **INOX machining** and **for HSC machining up to 62 HRC.**



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide 4 Flute Rippa Cutter

**Design:** Ultra-fine grit solid carbide, type NF, DIN 6527, 36/38°, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for rough milling, slot cutting and finishing milling. The fine cord toothing produces small chips which are easy to remove. This improves tool life and achieves a better surface finish. The irregular spiral lead 36°/38° results in low-vibration running and thus a very high surface quality. A much longer tool life is achieved than with conventional tools.

## Solid Carbide 4 Flute Rippa Cutter with Through Coolant

**Design:** Ultra-fine grit solid carbide, type NRf, DIN 6527, 30°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**
**With inner cooling: Increase in tool life of up to 50%, since chip blockage is reduced.**

**Application:** Can be used for rough milling. The fine cord toothing produces small chips which are easy to remove. This improves tool life and achieves a better surface finish.

Articles marked ◊ are not held in stock, procurement is effected at short notice.

## Solid Carbide Multi-Flute Rippa Cutter

**Design:** Ultra-fine grit solid carbide, type HR, according to factory standard, 45°, **TiAlN-coated,** with centre cut.

**Application:** Can be used for MTC (Multi-Task-Cutting) on new generation lathing/milling machines (MTM). The fine cord toothing produces small chips which are easy to remove. This improves tool life and achieves a better surface finish.

## Solid Carbide Necked Multi-Flute Rippa Cutter

**Design:** Ultra-fine grit solid carbide, type HR according to factory standard, 45°, **TiAlN-coated**, with centre cut and **free zone.**

**Application:** Can be used for MTC (Multi-Task-Cutting) on new generation lathing/milling machines (MTM). The fine cord toothing produces small chips which are easy to remove. This improves tool life and achieves a better surface finish.

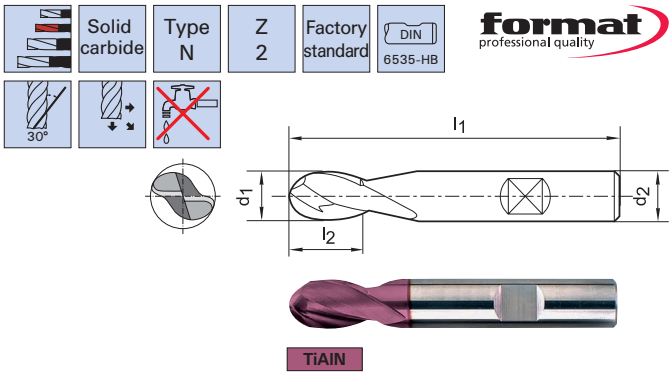
## Solid Carbide 2 Flute Ball Nose Slot Drills

**Design:** Solid carbide (K10/20), type N, according to factory standard, 30°, TiAlN, with centre cut.

**Application:** Universal milling cutter for copy-milling work. Can be used to a limited extent for plunge cutting, traversing, peripheral milling, traverse milling and slot cutting.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide 2 Flute Ball Nose Slot Drills

**Design:** Ultra-fine grit solid carbide, type N, DIN 6527, 30°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for copy milling and slot cutting as well as for universal machining.

**Note:** Copy milling, cutting values preferred at ap = 0.05 x $d_1$ and ae = 0.1 x $d_1$.

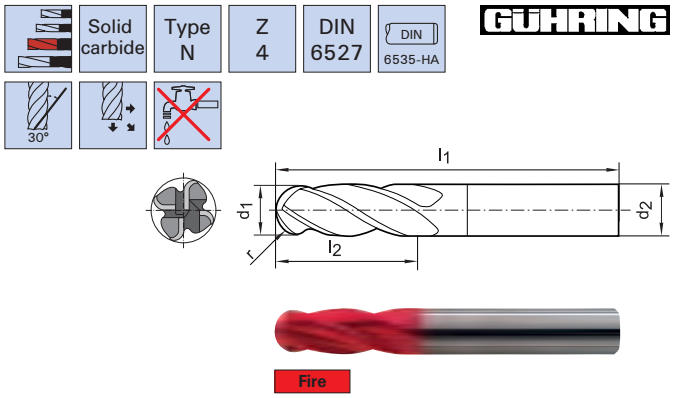
## Solid carbide radius cutter

**Design:** Ultra-fine grit solid carbide, type N, DIN 6527, 30°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for copy and finishing milling as well as for trimming and peripheral milling. Particularly suitable for **INOX machining**.

**Note:** Copy milling, cutting values preferred at ap = 0.05 x $d_1$ and ae = 0.1 x $d_1$.



| Order No. | Steels up to 850 N/mm² | Steels up to 1000 N/mm² | Steels up to 1400 N/mm² | Steels up to 42 HRC | Steels up to 52 HRC | Steels up to 56 HRC | Steels up to 60 HRC | Hard machining over 60 HRC | Stainless and acid-resistant steels (INOX) | Ti steels, Ti alloys, special steels | Cast iron materials | Al, Al and Mg alloys | Copper, brass, bronze |

## Solid Carbide 2 Flute Necked Ball Nose Slot Drills

**Design:** Ultra-fine grit solid carbide, type N, according to cfactory standard, 30°, **Signum-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**
**These tools should only be used in shrink or hydro-.expansion chucks.**

**Application:** Can be used for copy milling. The neck chip channel makes optimum tool range possible and thus makes it suitable for mould-making applications. Suitable for machining hardened materials **up to 54 HRC**.

**Note:** Copy milling; cutting values preferred at ap = 0.05 x $d_1$ and ae = 0.1 x $d_1$.

## Solid Carbide Necked 2 Flute Ball Nose Slot Drills for hard Machining

**Design:** Solid carbide **NANO,** type N, according to factory standard, 30°, **TiAlN-S-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for copy milling. The neck chip channel makes optimum tool range possible and thus makes it suitable for mould-making applications. The tool life increases with minimal amount lubrication or air cooling. The tool can either be used with a pivoted or straight spindle.
Suitable for HSC machining up **to 70 HRC**.

## Solid Carbide 2 Flute Slot Drill with Corner Radius

**Design:** Ultra-fine grit solid carbide, type N, DIN 6527, 30°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible. These tools should only be used in shrink or hydro-.expansion chucks.**

**Application:** Can be used for copy milling and slot cutting as well as for universal machining with corner radius to avoid notching effects on the workpiece – less corner wear during slot cutting. Suitable for HSC machining..

## Solid Carbide 2 Flute Torus Cutter with Corner Radius for Hard Machining

**Design:** Solid carbide (K05/10), type N, according to factory standard, 30°, **Signum-coated,** with tapered neck – see dimension $l_3/l_4$ (clear area) and centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible. These tools should only be used in shrink or hydro-.expansion chucks.**

**Application:** Can be used for copy milling, traverse and slot cutting. The tool life increases with MQL or air cooling. The tool can either be used with a pivoted or straight spindle. Recommended for HSC machining **up to 56 HRC**.

**Note:** Copy milling, cutting values preferred at ap = 0.1 x $d_1$ and ae = 0.5 x $d_1$.

## Solid carbide ratio mill for aluminium treatment

NEW

GÜHRING

**Design:** Solid carbide (K05/10), type W, DIN 6527, 39° 40° 41°, **nano-polished.**

**Application:** Suitable for grooving, roughing and smoothing in aluminium and aluminium alloys. Low in vibrations due to nano-polished cutting with micro support chamfers Traverse cutting with split point with reinforced cutting and more chipping space for drill and chamfer milling.

## Solid Carbide 4 Flute Necked End Mill with Corner Radius for Hard Machining

**Design:** Ultra-fine grit solid carbide, type H, according to factory standard, 30°, **Signum-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for copy milling. The neck chip channel makes optimum tool range possible and thus makes it suitable for mould-making applications. The tool life increases with MQL or air cooling. The tool can either be used with a pivoted or straight spindle. Suitable for machining hardened materials **up to 62 HRC**.

**Note:** Copy milling, cutting values preferred at ap = 0.1 x $d_1$ and ae = 0.5 x $d_1$.

## Solid Carbide 4 Flute End Mill with Corner Radius for Hard Machining

**Design:** Ultra-fine grit solid carbide, type N, according to factory standard, 30°, **TiAlN-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling. With corner radius to avoid notching effects on the workpiece. Suitable for HSC machining **up to 70 HRC**.

## Solid Carbide Long Series Multi Flute Necked End Mill with Corner Radius for Hard Machining

**Design:** Ultra-fine grit solid carbide (K50), type H, according to factory standard, 55°, **Signum-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling, trimming and high-precision finishing. **For large milling depth up to 3 x D.** Ideal for use in mould-making and dip working thanks to the neck chip channel and corner radius with long range. The extremely high spiral lead and reinforced core results in particularly smooth running and thus low deviation in shape and a very good surface on the workpiece. Suitable for HSC machining **up to 62 HRC**.

## Solid Carbide Long Series Multi Flute Necked End Mill with Corner Radius for Hard Machining

**Design:** Ultra-fine grit solid carbide, type N, DIN 6527 L, 45°, **fire-coated,** with centre cut.

**Cutting speed approx. 50% higher than with non-coated tools. Dry machining possible.**

**Application:** Can be used for peripheral milling, trimming and high-precision finishing, with corner radius to avoid notching effects on the workpiece – less corner wear during plunge cutting and slot cutting. The 45° spiral results in a soft and peeling cut and thus a high surface quality. Burr formation on the cutting edges is avoided. Suitable for HSC machining.

## HSSe Metal Slitting Saw Blade for GF Saws

**Design:** material no. 1.3243 HSS-E DMo5, bright, hardened and repeatedly annealed to **65-66 HRC.** With collar, without pin holes
Tooth shape: BW

**Application:** Can be used with portable GF pipe saws.. For cutting construction steels, non-alloyed tool steel, chrome steel and stainless steel, pipes made of high-alloyed steels (stainless steel). The saw blades can be re-sharpened several times.

## HSS Metal Slitting Saw Blade

**Design:** Precision of keyway cutting in accordance with DIN 1840, hollow-ground.
HSS-DMo5, bright, hardened and repeatedly annealed to **63–65 HRC** – with or without collar according to manufacturer's specifications – high-precision ground. Without pin holes.

HSS DMo5 | DIN 1837 | DIN 1838

K T S Sägetechnik

**2655** blank

**DIN 1837 A – herringbone tooth,** fine tooth pitch.

**Application:** For thin-walled materials and shallow cutting depths. For machining short-chipping materials.

**2656** blank

**DIN 1838 B – curved tooth,** coarse tooth pitch.

**Application:** For thick-walled materials and larger cutting depths.

**2657** blank

**DIN 1838 C – curved tooth with roughing and finishing teeth,** coarse tooth pitch

**Application:** High stock removal capacity possible thanks to chip breaking. For thick-walled materials and medium to large cutting depths.

Tooth shape: **Herringbone tooth A**

## Slitting Saw Blade Holder

**Design:** Shank in accordance with DIN 1835-B tempered, outer and inner Ø ground.
Concentricity tolerance: 0.01 mm.

**Application:** For the precise securing, clamping and seating of metal circular saw blades in accordance with DIN 1837 / 1838 using Weldon shank with a saw blade Ø of 20–100 mm.

**Scope of delivery:** With clamping screw and intermediate ring, without circular saw blade.

## Set of Slitting Saw Blade Holders

**Design:** Set of saw blade holders with tool carrier.
Shank in accordance with DIN 1835-B quenched and tempered, outer and inner Ø ground.
Concentricity tolerance: 0.01 mm.

**Scope of supply:** With tightening screw, intermediate ring in case, without circular saw blades.

**Application:** For the precise securing, clamping and seating of metal circular saw blades in accordance with DIN 1837 / 1838 using Weldon shank with a saw blade Ø of 20–63 mm.

## High Precision – Bore Reduction Ring for Slitting Saw Blades

**Design:** Made of special alloy, ground flat. For a perfect fit, knurled on the outer edge.

**Application:** For reducing the bore of metal circular saw blades from Ø 40 mm to Ø 32 mm.

## Solid Carbide Slitting Saw Blade

**Design:** Solid carbide, bright, laterally hollow-ground using mirror finish procedure, without pin holes.

Solid carbide

KTS Sägetechnik

**2678** Bright
Fine tooth pitch, with herringbone tooth.
For processing small cutting depths.

**2679** Bright
Coarse tooth pitch with curved tooth.
For processing large cutting depths and cross-sections.

**2678** bright

**2679** bright

## Metal circular saw blade

**Design:** Steam-tempered surface, suitable for all common machine types.

**Tooth types:** HZ: suitable for cutting solid materials and thick pipes with wall thickness > 3 mm.
BW: Standard tooth shape for cutting pipes.

**2667**
**Steam tempered**

Made of high-speed steel.

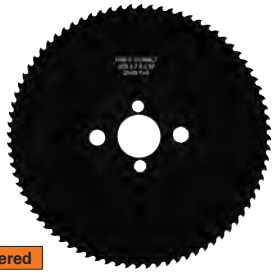
HSS

Steam tempered

**2668**
**Steam tempered**

Made of cobalt-alloyed high-speed steel.
For the cutting of non-corrosive steels or steels with a high tensile strength.

HSS-E



Steam tempered

## HSS Metal Slitting Saw Blade

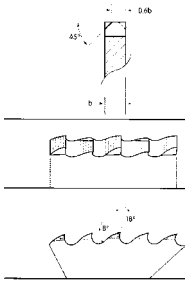
**Design:** Material no. 1.3343 (HSS-DMo5), bore H7, in accordance with DIN 1840, hollow-ground. The base material is laser-cut with a bright surface finish. Hardened and multiple times tempered to **63–65 HRC.**

HSS DMo5

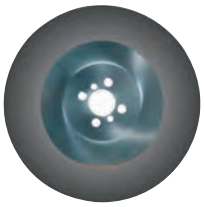
format professional quality

**2671** High-performance "Base Cut", wear-resistant coating according to the PVD process as protection against material pick-up, to improve tool life and use of coolant.

**Application:** Can be used on manual, semi-automatic and fully automatic sawing machines. For cutting construction steels, non-alloyed tool steel, tough and hard and tough materials (V 2A, V 4A) with material strengths up to **850 N/mm².** Universal use for steel **and** stainless steel.

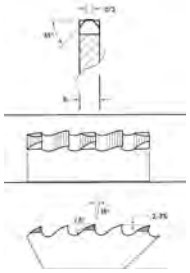


**Tooth shapes BW = curved tooth alternately bevelled up to 4 mm tooth pitch.**

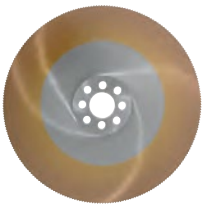


**2673** Very powerful "Eco", highly wear-resistant coating according to the PVD process as protection against material pick-up, to improve tool life and use of coolant.

**Application:** Can be used on manual, semi-automatic and fully automatic sawing machines. For cutting construction steels, non-alloyed tool steel, tough and hard and tough materials (V 2A, V 4A) with material strengths up to **1000 N/mm².** Universal use for steel **and** stainless steel.



**HZ = curved tooth with roughing and finishing teeth for all tooth pitches over 4 mm**



**2674** TiN Highly durable **TiN-coating.** With significantly reduced friction coefficient and greater temperature resistance.

**Application:** Outstandingly for automatic sawing machines and for the use of minimum quantity lubrication / minimum quantity cooling. The highly wear-resistant coating and improved gliding properties make it the preferred choice for permanent use / serial cutting. Permits higher cutting speeds and feeds while increasing tool life.

## Segmental Circular Saw Blade

**Design:** Segments made of HSS-DMo5, bright, hardened and repeatedly annealed to **63–65 HRC.** Body made of hardened and tempered special steel with a strength of approx. 1400 N/mm². The extremely tapered relief grinding of the segments in conjunction with the ground cooling channels ensures optimum coolant feed to the cutting area and thus guarantees optimum stock removal.
**Tooth shape HZ =** Curved tooth with roughing and finishing teeth.

**Application:** For cutting construction steel and non-alloyed tool steel with material strengths up to 850 N/mm². Particularly suitable for machines with powerful drive capacities and changing material cross-sections.

**Note:** Always use sufficient coolant.

## Carbide Tipped Circular Saw Blade for Jepson Circular Saw

**Design:** High quality hard-metal equipped saw blades (Dry Cutter) for JEPSON-cold circular saws, also for universal use. Without pin holes. Special tooth shape

**Application:** Saw blades particularly suited for dry cut in metal. Saw fast, with little burr and without cooling. Steel, non-ferrous metals, composites and plastic, cable channels. Achieve high cutting quality and long tool lives. (Heed speeds, see table.)

## Carbide Tipped Circular Saw Blade

Carbide

format professional quality

**2680** **Design: Trapeze flat tooth, positive**
The cutting speed should not be below 50 m/s for aluminium and 30-40 m/s for solid material.

**Application:** Mainly for use on circular saw benches which cut against the direction of feed. For profiles and solid material, format, mitre and longitudinal cuts in aluminium and other non-ferrous metals as well as for cutting synthetic resins, mainly thicker cross-sections.

**2683** **Design: Trapeze flat tooth, negative**
The cutting speed should not be below 50 m/s for aluminium and 30-40 m/s for solid material.

**Application:** Mainly for use on mitre saws with oscillating saw blades or other circular saw benches which cut against the direction of feed. For thin-walled profile made of aluminium and plastic, particularly anodised profiles.

## Keyhole Saw HSS/HSCo Bi-metal

**Design:** made of HSS bimetal for extreme cutting performance The bimetal design provides maximum safety and combines wear-resistance with long tool life and precision. No breaking even under increased load. With a solid base plate for more threads, thus increasing concentricity and axial run-out precision. The slots at the side make core removal easier. Cutting depth: 38 mm.
Supplied without mandrel and without drills.
With combination toothing 4/6 TPI for low vibration run in high-alloyed steel and stainless steel from 2 mm.

**2700** HSS, for steel

**2708** HSS Co5, for stainless steel.

**Application:** Can be used in connection with drills or cordless drill, allows large-calibre, exact drilling e.g. for pipe conduits in airconditioning, automobile or systems engineering.
Suitable for non-alloyed steels up to 700 N/mm², non-ferrous and light metals, plastic and wood processing.

Great price thanks to set combination.

## Keyhole Saw Set HSS/HSCo Bi-metal

**Design:** Supplied in plastic case.

**Application:** Format hole saws have a welded-on tooth edge of HSS or HSS Co5, which provides you with an extremely high cutting performance. The bimetal design provides maximum safety and combines wear-resistance with long tool life and precision. No breaking under increased load. Welded seams make format hole saws run more precisely and make them easier to handle particularly when used with portable drills. The slots at the side make core removal easier.
In addition the hole saws posses a **Combi-toothing of 4/6 TPI** for low-vibration run in material from 2 mm. With solid base plate, this provides more threads and greater stability as well as true running and side stroke precision.
Suitable for non-alloyed steels up to 700 N/mm², non-ferrous and light metals, plastic and wood processing.

## Keyhole Saw HSS Bimetal with Power Change Adaptor

**Design:** The bimetal Progressor keyhole saw with robust teeth made of high-quality HSS Matrix II steel with 8% cobalt alloy is extremely resistant and durable. Does not stop at stainless steel. With the **Power-Change-Adapter** it is possible to quickly and safely mount as well as release the keyhole saw and center drill without tools. Easy core removal thanks to side slots or by removing the hole saw with centre drill.
The top cutting performance is achieved thanks to the innovative reinforced **4/5 Tpi progressive tooth system** with the 10° cutting angle.

**Cutting depth: 40 mm.**

**Application:** Ideal for sawing stainless steel, steel, non-ferrous metal, hard wood, chipboard, plastic, acrylic, fibre composites etc.

## Power Change adapter technology

Innovative Power Change adapter technology puts an end to tiresome screwing on and off. The innovative adapter system allows hole saw and centre drill to be fixed and removed again quickly and safely without tools being required. The safety screw for the centre drill is also a thing of the past.

## Keyhole Saw HSS Bimetal with Power Change Adaptor for use on Sheet Metal

BOSCH

The SheetMetal hole saw is especially suitable for thin metal sheets (aluminium, copper, brass, bronze, steel or stainless steel). With vario-toothing, safety stop and ejection spring from 25 mm diameter.

**4/6 TPI Variable-pattern teeth:** for a fast and precise cut.
**Safety stopper:** prevents penetration and protects the working surface.
**HSS-bimetal:** with 8% cobalt allow for extreme resilience and a long service life.
**Ejection spring:** guarantees automatic washer ejection.
**Power-Change adapter:** it is possible to quickly and safely mount as well as release the keyhole saw and center drill without tools.

## Carbide Tipped Keyhole Saw

**Design:** with axial and radial special cut, which ensures optimal cutting results. Carbide hole saws achieve long tool lives and can be **reground several times.** No breakage with increased load. The tapered centre drill ensures smooth spot drilling (spot marking is not required) and is fixed using a tightening screw. **Scope of supply: Hole saw incl. drill.**

**Application:** Can be used on portable and pillar drilling machines.

**Note: With pillar drilling machines always choose manual feed.**

**2715** **Flat cut:** with ejection spring This ejects the drilled part and protects the carbide teeth during spot drilling. For material thicknesses up to 4 mm, stainless steel up to 2 mm. From 16–30 mm the hole saw is made in one piece. From 31 mm with specially hardened bit holders to compensate the torsion forces. We recommend MK 2/MK 3 from 31 mm. The sturdy design results in high concentricity. The CAD-optimised rake angles with special cut ensure high cutting performance and tool life. For flat material

**2722** **MBS:** With ejection spring. This ejects the drilled part and protects the carbide teeth during spot drilling. For material thicknesses up to max. 10 mm. (With material thicknesses over 6 mm the tool needs to be set down for chips to be emptied several times.) From 37 mm with specially hardened bit holders to compensate the torsion forces. We recommend MK 2/MK 3 from 37 mm. The solid construction and further developed cutting geometry produces significantly better cutting behaviour associated with a high cutting performance and with a high cutting performance and service life. For flat material, but also suitable on raw material and concaved surfaces.

**2728** **Deep cut:** Without ejection spring. For material thickness up to 4 mm, stainless steel up to 2 mm. Especially suited for pipe material and curved surfaces.

## Saw blade quality

**Soft wood:** High carbon steel for use in softer materials such as wood, wood fibre boards and plastics.
**HSS:** Fully hardened high-speed steel for use in harder materials such as metal, aluminium and non-ferrous metals.
**Bimetal:** Highly flexible, almost non-breakable combination of HCS and HSS, long service life. Can be used for hard woods, abrasive wooden materials, hard plastic, non-ferrous metals and metals.
**Carbide-tipped:** The HSC blade is equipped with carbide teeth and is thus suitable for abrasive materials such as glass-fibre-reinforced plastics, asbestos cement, hard woods and aerated concrete.

**Tooth design:**
**Teeth milled, side clearance side set:**
Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.
**Teeth milled, side clearance wavy set:**
Blade with fine result for straight cuts in plywood, soft steel, aluminium, non-ferrous metals and plastics.

**Teeth ground, side clearance side set:** Blade for clean, fast cuts in wood.
**Teeth ground, side clearance lead angle ground:** Blade with taper ground back for side clearance; for precise, fine and clean cuts in wood and plastic.

**Tooth pitch:**
Small tooth pitch for fine cuts with slower work progress, in hard and/or thin material such as metals and non-ferrous metals.
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

**Application:**
Saw blades are subject to high mechanical and thermal loads.
For this reason, the use of specific coolants, e.g. cutting oil (for steel, metals) or water (for aluminium, INOX, thin sheets), is recommended in order to extend the wear-resistance of the saw blade.

## Jigsaw blades for wood

**Saw blade quality:**
**HCS:** High carbon steel for use in softer materials such as wood, wood fibre boards and plastics.

**Bimetal:** Highly flexible, almost non-breakable combination of HSC and HSS, long service life. Can be used for hard woods, abrasive wooden materials, hard plastic, non-ferrous metals and metals.

**Tooth design:**
**Teeth milled, side clearance side set:** Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.
**Teeth milled, clearance wavy set:** Blade with fine result for straight cuts in plywood, soft steel, aluminium, non-ferrous metals and plastics.

**Teeth ground, side clearance side set:** Blade for clean, fast cuts in wood.
**Teeth ground, side clearance lead angle ground:** Blade with taper ground back for side clearance; for precise, fine and clean cuts in wood and plastic.

**Design: 5 pieces on card.**
**Suitable for:** Bosch, AEG, Milwaukee, DeWalt, ELU, Festool, Hitachi, Mafell, Makita, Metabo, Protool.

## Jigsaw blade for wood with metal

BOSCH

**Saw blade quality:**
**Bimetal:** Highly flexible, almost unbreakable combination of HCS and HSS. The area of application covers hard wood, abrasive wooden materials, hard plastics, non-ferrous metals and metals.

**Tooth design:**
**Teeth milled, side clearance side set:** Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.
**Design: 5 pieces on card.**
**Suitable for:** Bosch, AEG, Milwaukee, DeWalt, ELU, Festool, Hitachi, Mafell, Makita, Metabo, Protool.

| Order No. | Bosch No. | 2736 BOSCH | Cutting length mm | Material | Metal mm | Wood mm | Plastic mm | Tooth pitch mm | Type of tooth | Use |
|---|---|---|---|---|---|---|---|---|---|---|
| 0106 | T 345 XF | 12.95 | 106 | Bimetal | 3–10 | < 65 | 3–10 | progressive 2.4–5 | milled; side set | For construction wood with nails (< 65 mm), Alu/plastic pipes + profiles (∅ 3–10 mm), quick cuts with plunge tip. |

(W247)

## Jigsaw blades for special applications

**2735**

**Saw blade quality:**
**Carbide-tipped:** The HSC blade is equipped with carbide teeth and is thus suitable for abrasive materials such as glass-fibre-reinforced plastics, asbestos cement, hard woods and aerated concrete.

**Tooth pitch:** Small tooth pitch for fine cuts with slower work progress, in hard and/or thin material such as metals and non-ferrous metals.
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

**2736**

**Saw blade quality:**
**HSS:** Fully hardened high-speed steel for use in harder materials such as metal, aluminium and non-ferrous metals.
**Bimetal:** Highly flexible, almost non-breakable combination of HSC and HSS, long service life.
Can be used for hard woods, abrasive wooden materials, hard plastic, non-ferrous metals and metals.
**Carbide-tipped:** The HSC blade is equipped with carbide teeth and is thus suitable for abrasive materials such as glass-fibre-reinforced plastics, asbestos cement, hard woods and aerated concrete.

**Tooth design:** Teeth milled, side clearance side set. Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.

**Tooth pitch:** Small tooth pitch for fine cuts with slower work progress, in hard and/or thin material such as metals and non-ferrous metals.
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

**Application:**
Saw blades are subject to high mechanical and thermal loads. For this reason, the use of specific coolants, e.g. cutting oil (for steel, metals) or water (for aluminium, INOX, thin sheets), is recommended in order to extend the wear-resistance of the saw blade.
**Design: 5 pieces on card, T 341 HM, 3 pieces on card.**
**T 141 carbide, 1 blade on card .**
**Suitable for:** Bosch, AEG, Milwaukee, DeWalt, ELU, Festool, Hitachi, Mafell, Makita, Metabo, Protool.

| Order No. | Bosch No. | 2735 format | 2736 BOSCH | Cutting length mm | Material | Wood mm | Plastic mm | Tooth pitch mm | Type of tooth | Use |
|---|---|---|---|---|---|---|---|---|---|---|
| 0008 | T 101 BIF | – | 13.10 | 59 | Bimetal | 1.5–15 | – | 1.7 | Lead angle ground, teeth ground | Specially designed for laminate, plastic-coated boards and multiplex boards. |
| 0071 | T 101 A | – | 11.30 | 74 | HSS | – | 2–20 | 2 | Lead angle ground, teeth ground | For fine, straight cuts, ideal for Perspex and polycarbonate. |

## Jigsaw blades for plastics

**Saw blade quality:**

**HSS:** Fully hardened high-speed steel for use in harder materials such as metal, aluminium and non-ferrous metals.
**Bimetal:** Highly flexible, almost non-breakable combination of HSC and HSS, long service life. Can be used for hard woods, abrasive wooden materials, hard plastic, non-ferrous metals and metals.
**Carbide-tipped:** The HSC blade is equipped with carbide teeth and is thus suitable for abrasive materials such as glass-fibre-reinforced plastics, asbestos cement, hard woods and aerated concrete.

**Tooth design:** Teeth milled, side clearance side set. Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.

**Tooth pitch:** Small tooth pitch for fine cuts with slower work progress, in hard and/or thin material such as metals and non-ferrous metals.
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

**Application:**
Saw blades for clean cutting results in typically commercial plastics and shapes.
**Design: 5 pieces on card, T 108 BHM and T 301 CHM, 3 pieces on card.**
**Suitable for:** Bosch, AEG, Milwaukee, DeWalt, ELU, Festool, Hitachi, Mafell, Makita, Metabo, Protool.

| Order No. | Bosch No. | 2736 BOSCH | Cutting length mm | Material | Plastic mm | Tooth pitch mm | Type of tooth | Use |
|---|---|---|---|---|---|---|---|---|
| 0150 | T 102 D | 8.60 | 100 | HCS | 5–30 | 4.0 | Lead angle ground, teeth ground | For the problem-free, clean sawing of polypropylene (PP) and similar soft thermoplastic materials. |
| 0155 | T 102 H | 8.60 | 100 | HCS | 3–30 | 2.3 | Lead angle ground, teeth ground | For the problem-free, clean sawing of PVC and similar soft thermoplastic materials. |
| 0160 | T 302 H | 12.65 | 132 | HCS | 3–65 | 2.3 | Lead angle ground, teeth ground | For PVC (polyvinyl chloride), is often used for windows and structural elements. |
| 0165 | T 102 BF | 11.30 | 92 | BiM | 2–20 | 1.8 | ground, side set | For the clean, splinter-free sawing of PMMA (polymethyl methacrylate), is used e.g. for balcony panelling and shower doors. |
| 0170 | T 108 BHM | 22.60 | 92 | Carbide | 0–20 | 2.2 | Carbide-tipped, ground | Use: For easy, clean sawing of CFK and similar plastics such as carbon fibre. |
| 0175 | T 301 CHM | 31.70 | 117 | Carbide | 0–65 | 3.3 | Carbide-tipped, ground | For easy cutting of Corian® and similar solid surface materials such as Varicor®. |

|---|---|---|---|---|---|---|---|
| 0111 | T 130 Riff | 12.40 | 59 | Carbide | 5–15 | Carbide-tipped | For soft ceramic wall tiles, GRP, cast iron, coarse cut. |
| | | (W247) | | | | | |

## Saw blade quality:

**HCS:** High carbon steel for use in softer materials such as wood, wood fibre boards and plastics.

**Bimetal:** Highly flexible, almost non-breakable combination of HSC and HSS, long service life. Can be used for hard woods, abrasive wooden materials, hard plastic, non-ferrous metals and metals.
**Carbide-tipped:** The HSC blade is equipped with carbide teeth and is thus suitable for abrasive materials such as glass-fibre-reinforced plastics, asbestos cement, hard woods and aerated concrete.

**Tooth design:**
**Teeth milled, side clearance side set:** Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.
**Teeth milled, clearance wavy set:** Blade with fine result for straight cuts in plywood, soft steel, aluminium, non-ferrous metals and plastics.

**Teeth ground, side clearance side set:** Blade for clean, fast cuts in wood.
**Teeth ground, side clearance lead angle ground:** Blade with taper ground back for side clearance; for precise, fine and clean cuts in wood and plastic.

**Tooth pitch:**
Small tooth pitch for fine cuts with slower work progress, in hard and/or thin material such as metals and non-ferrous metals.
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

**Application:**
Saw blades are subject to high mechanical and thermal loads.
For this reason, the use of specific coolants, e.g. cutting oil (for steel, metals) or water (for aluminium, INOX, thin sheets), is recommended in order to extend the wear-resistance of the saw blade.

## Sabre saw blades for wood

**Saw blade quality:**
**HCS:** High carbon steel for use in softer materials such as wood, wood fibre boards and plastics.

**Tooth design:**
**Teeth ground, side clearance side set.** Blade for clean, fast cuts in wood and plastic.

**Tooth pitch:**
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

**Application:**
Saw blades are subject to high mechanical and thermal loads. For this reason, the use of specific coolants, e.g. cutting oil (for steel, metals) or water (for aluminium, INOX, thin sheets), is recommended in order to extend the wear-resistance of the saw blade.

**Design: 5 pieces in PVC pouch, (exception: 2748, 25 piece)**
**Suitable for:** All saber, reciprocal and tiger saws with standard shank.

**2746 0007**
For timber (< 150 mm), boards: chipboard, MDF (6–60 mm), plywood, plastic (< 150 mm), wooden wall (< 150 mm). Effortless fine cut.

**2744/46/48 0010**
For timber, wooden walls, boards: chipboard, MDF, plywood, plastic, specially designed for plunge cuts.

**2744/46/48 0020**
For rough wood, nail-free, green wood, pruning, firewood.

## Sabre saw blades for metal

**Saw blade quality:**
**Bimetal:** Highly flexible, almost non-breakable combination of HSC and HSS, long service life. Can be used for hard woods, abrasive wooden materials, hard plastic, non-ferrous metals and metals.

**Tooth design:**
**Teeth milled, side clearance side set.** Blade with relatively coarse cut and fast work progress in hard and soft wood, aluminium, plastics and non-ferrous metals.
Teeth milled, side clearance wavy set. Blade with fine result for straight cuts in plywood, soft steel, aluminium, non-ferrous metals and plastics.

**Tooth pitch:**
Small tooth pitch for fine cuts with slower work progress, in hard and/or thin material such as metals and non-ferrous metals.
Large tooth pitch for coarser cuts coupled with fast work progress in soft and/or thick material such as wood and plastic.

2x2 Tooth: Aggressive tooth: Large tooth pitch, large gullet for high cutting speed and fast chip discharge. Sturdy tooth: Small tooth pitch, small gullet, reinforced tooth back for long service life.

format professional quality
BOSCH

**Application:**
Saw blades are subject to high mechanical and thermal loads. For this reason, the use of specific coolants, e.g. cutting oil (for steel, metals) or water (for aluminium, INOX, thin sheets), is recommended in order to extend the wear-resistance of the saw blade.

**Design:** 5 pieces in PVC pouch, (exception: 2748, 25 piece).
Suitable for: All saber, reciprocal and tiger saws with standard shank.

**2746 0024**
For thick metal sheets, closed pipes/profiles.

**2744/46/48 0025**
For thick metal sheets. Pipes + profiles (Ø 10–100 mm).

**2746 0027**
For thick metal sheets, fast cut.

**2744/46 0035**
For thin metal sheets. Pipes + profiles (Ø 5–100 mm).

**2746 0036**
For thin metal sheets, effortless fine cut.

**2744/46/48 0040**
For thin metal sheets (0.7–3 mm), fine pipes/profiles (Ø <175 mm), effortless fine cut, flexible flush cut.

**2744/46 0042**
For thick metal sheets, solid pipes/profiles, flexible flush cut, fast cut.

**2746 0045**
For thin metal sheets, fine pipes/profiles, effortless fine cut.

**2746 0061**
For thick metal sheets, fine pipes/profiles, effortless fine cut.

**2746 0230**
For thick metal sheets (4–12 mm), thick-walled, solid pipes and profiles (<100 mm). Ideal for pipe-cutting devices, for rescue and demolition work. Powerful coarse cut.

**2746 0235**
For thin metal sheets (0.7–3 mm), fine pipes/profiles (Ø <175 mm), effortless fine cut, flexible flush cut.

**2746 0245**
For thick metal sheets (4–12 mm), thick-walled closed and open profiles and pipes (<250 mm). Fast, precise cuts at accurate angles.

**2746 0220**
Demolition work in metal.

**2746 0210**
For thick-walled pipes and profiles, fast cuts at accurate angles.

**2746 0215**
For thick-walled pipes and profiles, fast cuts at accurate angles.

**2746 0205**
For thin-walled pipes and profiles, fast cuts at accurate angles.

## Saw blade for Bosch tandem all-purpose saw GFZ 14-35 A, 16-35 AC

**Saw blade quality:**
**HCS:** High carbon steel for use in softer materials such as wood, wood fibre boards and plastics.

**Carbide-tipped:** The HSC blade is equipped with carbide teeth and is thus suitable for abrasive materials such as glass-fibre-reinforced plastics, asbestos cement, hard woods and aerated concrete.

**Design: 2 pieces on card.**
**Suitable for:** Bosch tandem all-purpose saw GFZ 14-35 A; 16-35 AC.

BOSCH

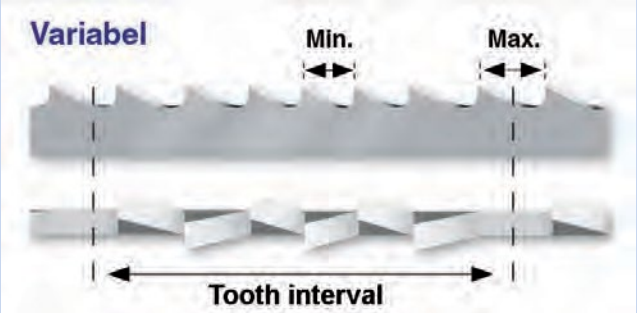
| 0000 | TF 350 NHM | 41.60 (W247) | Carbide-tipped | 408 | Set of saw blades for various materials e.g. porous concrete, railway sleepers |

## TOOTH PITCH

Tooth pitch describes the number of teeth per inch (Tpl).
1 inch is equivalent to 25.4 mm.



Variable tooth distributions are identified by two measuring figures, e.g. 2-3 TPI. Here, 2 TPI marks the maximum tooth gap and 3 TPI the minimum tooth gap.

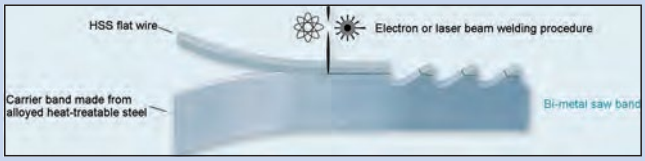
The standard offset can be used universally for cutting thicknesses as of 5 mm for steel, cast iron and hard non-ferrous metals. With a constant tooth distribution, the offset sequence is left/right/straight. With a variable tooth distribution, one tooth per interval not offset. The remaining teeth in the interval are repeated and offset left/right.

WIKUS
Präzision an der Schnittstelle

The decisive factor for the tooth pitch is the working length of the band saw blade in the workpiece. The table shows the respective upper and lower limits.

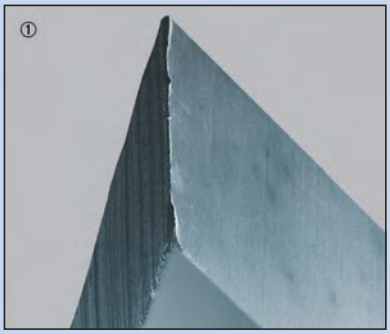
| Variable Tooth pitch TPI | Working length (mm) from | to |
|---|---|---|
| 10 –14 | – | 20 |
| 08 –12 | 10 | 30 |
| 06 –10 | 20 | 50 |
| 5 – 8 | 30 | 60 |
| 4 – 6 | 50 | 90 |
| 3 – 4 | 80 | 150 |
| 2 – 3 | 120 | 300 |
| 1.4 – 2 | 250 | 600 |
| 1.0 – 1.4 | 400 | 1000 |
| 0.85– 1.15 | 600 | 2000 |
| 0.75– 1.25 | 600 | 2000 |
| 0.7 – 1.0 | 1000 | 3000 |

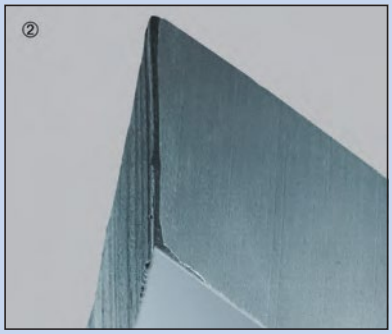
## Structure of a bimetal band saw blade

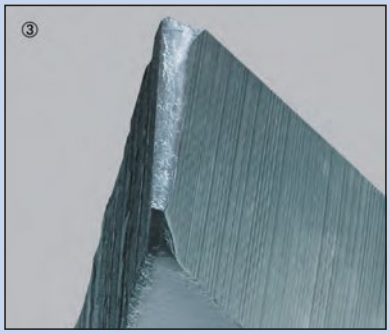


## BREAKING IN OF SAW BLADES

Correct breaking in guarantees longevity, see illustration above:
1. New cutting edge with very small edge radius
2. Optimally rounded cutting edge due to correct breaking in of saw band
3. Excessive load due to inappropriate breaking in leads to micro-chipping at the cutting edge.







**Bimetal saw bands**

Sharp cutting edges with extremely small edge radii are the prerequisite for high cutting performance.
WIKUS blades are predestined for this.
In order to maintain optimum service life, we recommend to break in the blade accordingly. Depending on the material and dimensions of the cutting object, determine the correct cutting and advancing speed (e.g. with the WIKUS bimetal cutting data slide rule). It is important that the new saw blade is only used with approx. 50% of the feed rate determined. Micro-chipping due to excessive chip thickness is thus avoided.
New saw blades can tend to vibrate and generate vibration sounds. Here, it is helpful to slightly reduce the cutting speed.
Where small workpiece dimensions are involved, approx. 300 $cm^2$ of the material should be cut to break in the blade.
If large workpiece dimensions have to be processed, we recommend to break in the blade for approx. 15 minutes.
After the breaking in period, you can slowly increase the advance to the previously determined speed rate.

**Carbide saw blades**

After selection of the optimum parameters for the application case on hand (e.g. using the WIKUS carbide cutting data slide rule) you should break in the carbide saw blade at about 75% of the cutting speed and 50% of the feed rate. It is very important to avoid vibrations. In this case, a change of cutting speed should help. After the breaking in time of approx. 15 min or 300 $cm^2$, you should slowly increase first the cutting speed and then the feed rate to the previously determined data. Before you use the blade for the first time check both the blade tension, which should be about 300 $N/mm^2$, and the oil content of the cooling lubricant. Hand refractometers can be found on page 📖 9/107 and belt tension measuring devices are available upon enquiry.

## Band saw blade HSS bimetal

**Design:** HSS bimetal, metal band saw blade with unbreakable and flexible backing material with combination tooth pitch.

**Application:** For sawing construction and low-alloy steels, as well as aluminium and non-ferrous metals.

## Band saw blade HSS bimetal

**Design:** Wear-proof tooth blades made of HSS in M42 quality combined with extremely durable tooth tips.

**WIKUS MARATHON® M42:** Tooth pitch to **5–8 teeth** per inch, cutting angle positive.

**Application:**
For sawing all steels up to 40 HRC, for layer and bundle cuts of larger workpiece dimensions, for large profiles and full materials as well as non-ferrous metals.

**WIKUS VARIO® M42:** Tooth pitch from **6–10 teeth** per inch, cutting angle 0°.

**Application:**
For sawing all steels up to 40 HRC, for profile and bundle cuts, for small and medium workpieces.

## Band saw blade HSS bimetal

**Design:** Wear-proof tooth blades made of HSS in M42 quality combined with extremely durable tooth tips.

**WIKUS PROFLEX® M42 (68-69 HRC):** Tooth pitch up to **8–11 teeth** per inch, rake angle positive, with special tooth geometry.

**Application:** For the sawing of profiles and beams of various dimensions and for sawing work susceptible to vibrations. For single and bundle cutting.

## Carbide-Band saw blade DUROSET

**Design:** Set carbide band saw blade for the performance-related machining of steels.

**Application:** For universal use on all band saw machines, including swing frames and band saw machines not suitable for carbide. Increased performance and tool life compared with bimetal saw blades.

## Band saw coil Wikus DIAMANT

**Design:** Made of alloyed tool steel for good wear resistance at tooth tips as well as the mount. In addition, the saw blade possesses an especially hardened blade backing, providing increased sturdiness and minimum wear, which allows for greater cutting parameters. **Supplied in 30.5 m coils.**

**Application:** For general sawing work with plain and low-alloy steels and non-ferrous metals.
Preferably for smaller and medium size cross cuts up to max. 70 mm length of path of contact.

**N =** Normal tooth, **cutting angle 0°.**
**H =** Claw tooth, **cutting angle positive.**

## HSCo/HSS Machine Saw Blades

**2752** **Design:** HSS-machne saw blade made from HSS 1.3343 (DMo5) hardened in vacuum, 0° and 7° saw blade with positive cutting angle.

**Application:** Universal saw blade for most cutting applications, straightforward, sturdy and reliable. 7° saw blade particularly suitable for long-chipping and tough materials such as stainless steels.

HSS DMo5

2752 format professional quality

**2753** **Design:** Komet SB-5 brand product, made of highly sturdy HSS steel according to state of the art production methods, approved for highest tool life and universal range of application. Komet VP-7 saw blade with additional variable tooth pitch and positive teeth.

**Application:** For quality cuts with utmost performance in long-chipping and tough workpieces as well as rust and acid resistant steels. The tooth geometry reduces the vibrations when sawing. Areas of application are increased thanks to the variable tooth pitches.

HSS DMo5

2753 KOMET

**2754** **Design:** Komet Ko-Bi high-performance saw blade which is practically unbreakable under normal circumstances.

**Application:** For universal use thanks to high fracture resistance.

HSS Bimetal

Machine saw blades in HSS-Co and special dimensions up to 1500 mm available on request.

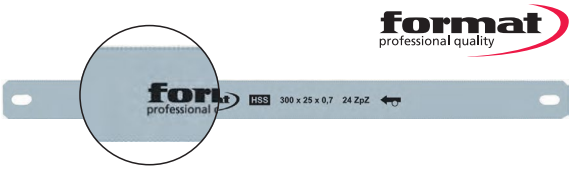
## Hand saw blade, HSS

**Design:** Entirely hardened, with teeth edge made of high-speed steel.

**Application:** Is used preferably because of its edge retention.

HSS



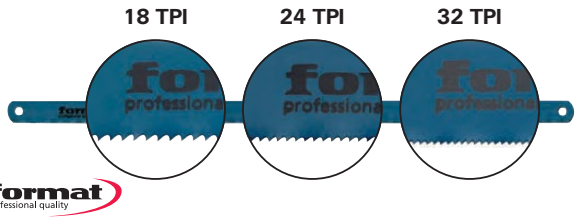
| Order No. | Length mm | 2749 format | Width mm | Thickness mm | Teeth per inch |
|---|---|---|---|---|---|
| 0020 | 300 | 2.18 (W250) | 25 | 0.70 | 24 |

## Hand saw blade, HSS/bimetal

**Design:** Shatterproof bimetal hand saw blade with precision ground teeth edge made of high-speed steel. The teeth area is electronically welded to the spring steel backing material in a vacuum. Reduced vibration for thin materials in the first cut.

**Application:** These blades combine high performance with safety against breakage and are universally applicable.

HSS Bimetal



2750 format

| Order No. | Length mm | 2750 format | 2747 BAHCO | Width mm | Thickness mm | Teeth per inch |

2747 BAHCO

## Hand saw blade, HSS/bimetal, progressive

**Design:** Shatterproof bimetal hand saw blade with precision ground teeth edge made of high-speed steel and with **progressively extending tooth pitch,** descending from 32 to 18 teeth per inch. The teeth area is electronically welded to the spring steel backing material in a vacuum. Reduced vibration for thin materials in the first cut.

**Application:** Especially efficient in all areas of application. Has a high cutting performance, even in coarse materials.

## Tool bit form A, round

**Design:** HSS Co10, DIN 4964 or ISO 5421, hardened, annealed, true to size and dressed to size. The ends are perpendicular, straight and non-machined.
**Hardness approx. 63–68 HRC.**
Tolerance for form A: length: ± 2 mm
Ø: h8

**Application:** Ground to be suitable for use as a form tool for hollowing, boring, engraving and copying in tool- and mould-making.

## Tool bit form D, flat

**Design:** HSS Co10, DIN 4964 or ISO 5421, hardened, annealed, true to size and dressed to size. The ends are perpendicular, straight and non-machined.
**Hardness approx. 63–68 HRC.**
Tolerance for form D: length: ± 2 mm
Cross-section: h13/h14

**Application:** Ground to be suitable for use as a form tool for hollowing, boring, engraving and copying in tool- and mould-making.

HSS Co10 | DIN 4964

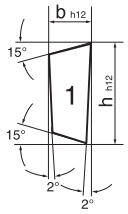
## Tool bit, form L 1, dual trapezoidal

**Design:** HSS Co10, according to factory standard, hardened, annealed, true to size and dressed to size. The ends are straight and non-machined.
**Hardness approx. 63–68 HRC.**
Tolerance for form L1: length: ± 2 mm
Cross-section: h12/h12

**Application:** Due to respective grinding, also suitable as a parting tool for parting and grooving in tool- and mould-making.



HSS Co10 | Factory standard

| Order No. | h x b mm | 2786 | Total length mm |

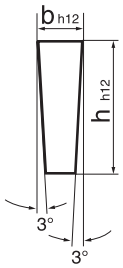
## Tool bit form E, trapezoidal

**Design:** HSS Co10, DIN 4964 or ISO 5421, hardened, annealed, true to size and dressed to size. The ends are straight and non-machined.
**Hardness approx. 63–68 HRC.**
Tolerance for form E: length: ± 2 mm
Cross-section: h12/h12

**Application:** Due to respective grinding, also suitable as a parting tool for parting and grooving in tool- and mould-making.



HSS Co10 | DIN 4964

| Order No. | h x b mm | 2788 | Total length mm |
|---|---|---|---|
| 0001 | 12 x 3 | 6.65 | 80 |

## Engraving bright form A, round

**Design:** HSS Co10, according to factory standard, hardened, annealed, true to size and dressed to size. Pre-profiled on one side (bisection with 0.1 mm measurement), with straight cutting edge (length of cutting edge 1.5 x D). One end not machined.
**Hardness approx. 63–68 HRC.**
Tolerance for form A: length: ± 2 mm
Ø: h8

**Application:** Due to respective grinding, also suitable for engraving lettering and contours as well as for contour turning and copy milling in dip working and mould-making. The pre-profiled bisection is quickly adapted to the required purpose of application by finish-grinding.

HSS Co10 | Factory standard

| Order No. | Ø h8 mm | 2790 | Cutting edge length mm | Total length mm |

## Solid carbide precision round bars/engraving tools

**Design:** Solid carbide (K10/K20), according to factory standard, choice of round or straight cutting edge. High-precision round grinding (bisection with 0.02–0.05 mm measurement).
Tolerance for form A: length: ± 2 mm
Ø: h6

Solid carbide | Factory standard

**2792** **Solid carbide rod.**

**Application:** Ground to be suitable for use as a form tool for hollowing, boring, engraving and copying in tool- and mould-making.

2792

**2794** **Solid carbide engraving bright, pre-profiled at one side.**

**Application:** Due to respective grinding, also suitable for engraving lettering and contours as well as for contour turning and copy milling in dip working and mould-making. The pre-profiled bisection is quickly adapted to the required purpose of application by finish-grinding.

## Brazed Carbide Tipped Lathe Tools

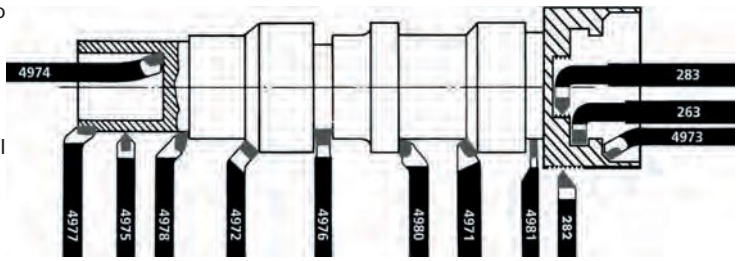
**Design:** DIN 4971-DIN 4981 or according to factory standards DIN 263/282 and 283. All steel shanks with approx. 750 N/mm² strength and flat-milled contact surface.
All lathe tools have a sharp-ground carbide cutting plate soldered o
Tolerance overall length: max. ± 5 %.
Material/cutting plates:
Carbide-type ISO-range P25/P30.

**Application:** For general turning work.

**P25/P30** is suitable for steel, cast steel, long-chipping iron material and malleable iron.

**All lathe tools are also available in the carbide types P10, P20, P40, M10/20, K10/20 on request.**

**Shape overview**



## Straight Lathe Tool ISO 1

**Design:** Carbide, P25/30, DIN 4971/ISO 1.

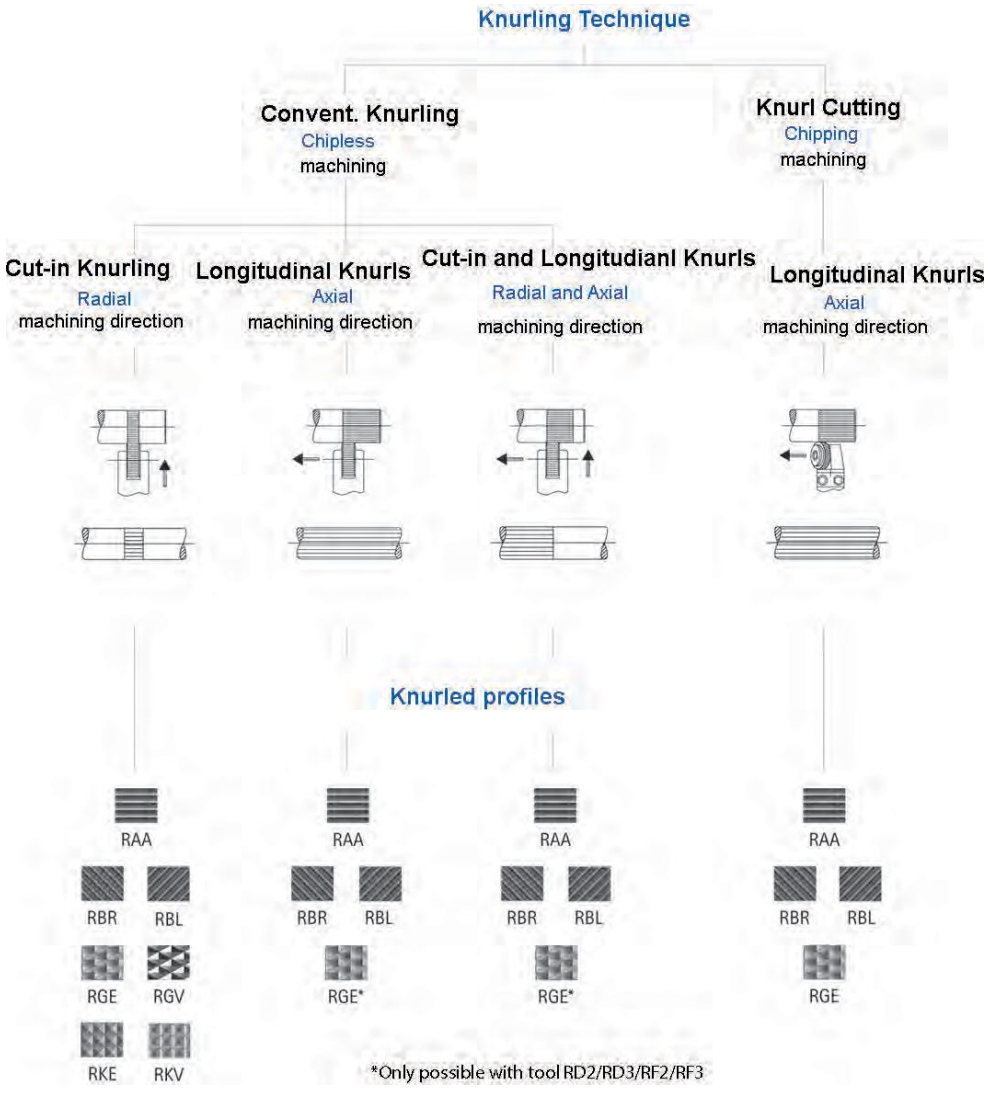
(W268)

## Features of the knurling process

| | Knurling tools | Knurling cutters |
|---|---|---|
| Application | • Processing cold-formable materials<br>• Knurling on thin-walled workpieces is problematic<br>• Wider application scope<br>  • All knurled forms and profiles can be produced<br>  • Suitable for face and inner knurling<br>  • Knurling up to the collar possible<br>  • Tool can be applied to any part of the workpiece | • Processing of almost all materials possible<br>• Thin-walled workpieces can be processed<br>• Suitable for visible knurls – highest knurl quality<br>• Restricted application areas<br>  • Only RAA and RGE knurl profiles are achievable<br>  • Cylindrical workpieces can only be processed in the axial direction of machining<br>• To prepare the tool in the central area of the workpiece a punch is required |
| Characteristics | • The outer diameter of the workpiece is increased by material displacement<br>• The surface is compressed<br>• Higher machine load than with knurling | • No signficiant change in the outer diameter of the workpiece<br>• Low surface compression<br>• Higher precision and surface quality of the knurl<br>• Lower machine load |
| Handling | • Workpiece preparation generally unnecessary<br>• Tool very easy to handle | • Precise tool setting and fine adjustment required<br>• Precise preparation of the workpiece required |



## Pressure Knurling Tool (Tool Only)

**Design:** Holder made of tempered steel. Supplied without knurling wheel.

**Application:** For form knurling (non-cutting forming).
Plunge knurling can be used to produce all knurling patterns/profiles and markings.
Feed knurling can be used to produce the profiles RAA, RBL and RBR.

**Knurling wheels:** All knurling forms can be used.
**Machine type:** Lathes/automatic lathes – conventional – centre height must be set.

| Order No. | Model | 2935 | Working area Ø mm | Shank mm | Shank length mm | Head width mm | Knurl required mm |
|---|---|---|---|---|---|---|---|
| 0100 | 830-16 U 250 806 | 21.60 (W270) | 15–200 | 16 x 16 | 130.5 | 18 | 20 x 8 x 6 |

## Pressure Knurling Tool (Tool Only)

**Design:** Holder made of tempered steel. Supplied without knurling wheel.

**Application:** For form knurling (non-cutting forming).
Can be used for plunge and feed knurling. The tool can also be used for knurling on the workpiece according to DIN 82: RAA, RBL, RBR, RGE 30°, RGE 45°.

**Knurling wheels:** RAA – 2 x AA
RGE 30° – 1 piece BL 30°/1 piece BR 30°
RGE 45° – 1 piece BL 45°/1 piece BR 45°
**Machine type:** Lathes/automatic lathes – conventional – centre height must be set.

## Pressure Knurling Tool (Tool Only)

CNC

**Design:** Body made of tempered steel. The special surface hardening ensures increased resistance to wear. The carbide runner pins ensure greater torque, faster processing and improved tool life. In addition there are set screws integrated in the shank for clearance angle adjustment. Supplied without knurling wheel.

**Application:** For form knurling (non-cutting forming).
Plunge knurling can be used to produce all knurling patterns/profiles and markings.
Feed knurling can be used to produce the profiles RAA, RBL and RBR.

**Note:** With **ClickPin**® for a quick exchange of the thumb wheel via spring pressure piece.

**Knurling wheels:** All knurling forms can be used.
**Machine type:** Lathes/automatic lathes – CNC and conventional – upper shank edge = centre height.

| Order No. | Model | 2938 | Working area Ø mm | Shank mm | Shank length mm | Knurl required mm |
|---|---|---|---|---|---|---|
| 0205 | 131-12 R 150404-VS-A* | 108.50 | 3– 50 | 8 x 8 | 99.0 | 15 x 4 x 4 |

## Cut Knurling Tool (Tool Only)

CNC

**Design:** Holder made of tempered steel. The special surface hardening ensures increased resistance to wear Thanks to the carbide bushings higher speeds, faster machining and an improved tool life are achieved. The tool furthermore possesses a modular design which allows the tool to be applied **universally as a left and right version.** Conversion is simply by turning the knurling head. The clearance angle is set using the set screws on the shank, fine adjustment for straight knurling using the adjustable knurling head. The change-over time is significantly reduced with the precise positioning of the knurled cutting head via an adjustment scale, the easy preset and reproducible setting parameters. Supplied without knurled cutter

**Application:** For cut knurling (chip removal).
Can be used for feed knurling. The tool can be used for knurling on the workpiece according to DIN 82: RAA, RBL, RBR.

**Knurling wheels:** RAA – 1 piece BL 30° (for use on the left)/1 piece BR 30° (for use on the right)
RBR 30° – 1 x AA (for right application)
RBL 30° – 1 x AA (for left application)

**Machine type:** automatic lathes – CNC and conventional – upper shank edge = centre height.

The tool also possesses a modular design which allows the tool to be applied **universally as a left and right version.** Conversion is simply by turning the knurling head. The change-over time is significantly reduced with easy preset and reproducible setting parameters. The tool also has a fine adjustment feature to position the knurled cutting head for an even knurling depth, a setting spindle and a setting scale. Synchronous setting of the knurl holding unit to the workpiece diameter is done using the central setting screw. Supplied without knurled cutter Modular construction: adaptation of shank sizes via adapter angle.

**Application:** For cut knurling (chip removal).
Can be used for feed knurling. The tool can be used for knurling on the workpiece according to DIN 82: RGE 30°, RGE 45°.

Knurling wheels: RGE 30° – 2 x AA
RGE 45° – 1 piece BL 15°/1 piece BR 15°

**Machine type:** Lathes and automatic lathes – CNC and conventional – centre height is integrated in the tool holder.

| Order No. | Model | 2952 | Working area Ø mm | Shank mm | Shank length mm | Knurl required mm |
|---|---|---|---|---|---|---|
| 0155 | 241-12 M 150408-VS-A | 645.50 (W270) | 3–50 | 12 x 12 | 116 | 15 x 4 x 8 |

## Cut Knurling Tool (Tool Only)

CNC

**Design:** Holder made of tempered steel. Supplied without cut knurling wheel.

**Application:** For cut knurling (chip removal).
Can be used for feed knurling. The tool can be used for knurling on the workpiece according to DIN 82: RAA, RBL, RBR. The clearance angle is set using the set screws in the shank.

**Knurling wheels:** RAA – 1 x BR 30° (right application)
– 1 x BL 30° (left application)
RBL – 1 x AA (left application)
RBR – 1 x AA (right application)

**Machine type:** Lathes and automatic lathes – CNC and conventional – centre height is integrated in the tool holder.

| Order No. | Model | 2952 | Working area Ø mm | Shank mm | Shank length mm | Knurl required mm |
|---|---|---|---|---|---|---|
| 0200 | 931-20 R 250608 A1 | 272.50 (W270) | 10–300 | 20 x 25 | 129 | 25 x 6 x 8 |

## Cut Knurling Tool (Tool Only)

CNC

**Design:** Holder made of tempered steel. The tool also possesses a modular design which allows the tool to be applied **universally as a left and right version.** Conversion is simply by turning the knurling head. Quick setting of the production diameter is ensured with the adjustment scale and setting spindle. In addition, the tool has a radial and axial anti-rotation device for optimum tool guidance on the workpiece and improved surface quality. It is also possible to achieve an optimum starting position with the position raster. Supplied without knurled cutter

**Application:** For cut knurling (chip removal).
Can be used for feed knurling. The tool can be used for knurling on the workpiece according to DIN 82: RAA; RBL; RBR.

**Knurling wheels:** RAA – 1 piece BL 30° (for use on the left)/
1 piece BR 30° (for use on the right)
RBL 30°/RBR 30° – 1 x AA (left/right application)

**Machine type:** Lathes/automatic lathes – CNC and conventional – upper shank edge = centre height.

| Order No. | Model | 2952 | Working area Ø mm | Shank mm | Shank length mm | Knurl required mm |
|---|---|---|---|---|---|---|
| 0205 | 231-20 M 250608-B | 421.50 (W270) | 10–300 | 20 x 20 | 130.8 | 25 x 6 x 8 |

## Cut Knurling Tool (Tool Only)

CNC

**Design:** Holder made of tempered steel. The tool also possesses a modular design which allows the tool to be applied **universally as a left and right version.** Conversion is simply by turning the knurling head. Vertical height adjustment makes use on shank sizes 20 and 25 possible. The setting scale and setting spindle guarantee fast setting of the manufacturing diameter. The fine adjustment of the centre height is achieved with the height adjustment of the milling head spindle. Supplied without knurled cutter

**Application:** For cut knurling (chip removal).
Can be used for feed knurling. The tool can be used for knurling on the workpiece according to DIN 82: RGE 30°, RGE 45°.

**Suitable knurled wheels (not included):**
RGE 30° - 2 x AA
RGE 45° – 1 piece BL 15°/1 piece BR 15°

**Machine type:** Lathes/automatic lathes – CNC and conventional

## Keyway push-type broach

**Design:** HSS, with relief angle. Guide bushings marked I, II and III have a contact collar, shims are included in the price.

**Application:** For the production of machine elements, templates, welding, drilling and clamping devices; the cutting angle is set for steel, but can also be applied for cast iron, bronze and aluminium.

For the quick and rational establishment of accurate, precisely centric keyways according to DIN 6885 for fit JS9. The required chip removal is achieved by several passes. Tooth shape and relief angle guarantee a clean surface finish. Can be used on manual and hydraulic presses.

**The shims are included in the scope of supply of the broaches.**

## Square broach

**Design:** HSS, with pilot pin. This is set into the pre-bored hole in the workpiece and guarantees the perpendicular alignment of the internal square profile. The pre-bored hole (tolerance H8) is selected somewhat larger to make sure only one pass is necessary with short overall length. The cutting edges are finely ground on all sides and ensure a clean surface finish.

**Application:** For manufacturing internal square profiles with high angle precision. No special machines or set-up times necessary. For manufacturing machine elements, templates, welding, drilling and clamping devices. The rake angle has been designed for steel but can also be used for cast iron, bronze and aluminium.

HSS

# Carrier systems for indexable inserts

## For rotating, milling, piercing, drilling and thread cutting

Our range has been consistently developed and extended to include new products.

Numerous milling cutters and ISO-clamp holders feature a HARD NICKEL LAYER to improve their features and for the greatest possible lifespan.

All carrier tools are manufactured from quenched and tempered steel.
The insert seats are not manufactured until after tempering, to guarantee maximum precision for professional use.
Thus, we can provide stable carrier tools for the best productivity.

## T-slot cutter with inner cooling

| Order No. | Dimensions | Milling insert | Catalogue page | |
|---|---|---|---|---|
| 2999 1700 – 2999 1710 | Ø 25–40 mm | CCMX 0603/08T3/09T3... | 2/179 | ● |

## Application Areas

The clearance angle between the lower jaw and the cutter body is critical in the use of tools with tilt-immersion.

For recommendations of the max. tilt angle and depth of cut please refer to the attached table and names and formulas.

## Ramping Angles – Endmills

| | | | 40 | VCGT 22... | 21.0 | 2/176 |

## Application Areas

The design of the mill and the clearance angle of the lower jaw is crucial in deciding whether or not a tool can be used for internal bore milling without a pilot hole. For recommendations of the max. and min. bore diameters (for smooth slot bases) and the max. cut depth per revolution please refer to the following table and names and formulas.

Wear resistance

| | | P | M | K | N | S | H |
|---|---|---|---|---|---|---|---|
| 01 | | Finishing at high cutting speeds, best machining results, no vibrations | | | | | |
| 10 | | Copying and milling at high cutting speeds, good machining results, with small to medium chip cross-cutting | | | | | |
| 20 | | Copying and milling at medium cutting speeds, for medium to slightly adverse chipping conditions | | | | | |
| 30 | | Copying and milling at medium cutting speeds, and adverse chip conditions (break in cutting) | | | | | |
| 40 | | Copying and milling at low to medium cutting speeds, and extremely adverse working conditions (break in cutting) | | | | | |
| 50 | | Milling at very low cutting speeds, extremely adverse working conditions (severe breaks in cutting) | | | | | |

Toughness

**Carbide, coated**

| | | | |
|---|---|---|---|
| PK | 9115 | $Al_2O_3$ | CVD coating, main application area is in groups P and K, only dry processing, high cutting speeds |
| KH | 9105 | $Al_2O_3$ | PVD coating, main application area is in groups K and H, wet and dry processing, high cutting speeds |
| PK | 9125 | $Al_2O_3$ | PVD coating, main application area is in groups P and K, wet and dry processing, medium to high cutting speeds and feed rate |
| PK | 9140 | $Al_2O_3$ | PVD coating, main application area is in groups P and K, wet and dry processing, medium to high cutting speeds and feed rate |
| KNH | 9110 | $Al_2O_3$ | PVD coating, universally applicable, wet and dry processing, high cutting speeds, with good machining conditions for operations with high thermal loads |
| PMK | 9130 | TiCN | PVD coating, main application area is groups P and K, sometimes also M, wet and dry processing, medium cutting speed combined with good wear resistance and toughness |
| U | 9135 | $Al_2O_3$ | Gradient PVD coating with increased resistance to oxidation, universal use, dry and wet processing, very good gliding properties, medium cutting speeds with low to medium chip cross-cutting, used in poor machining conditions |
| U | 9035 | $Al_203$ | PVD coating, universal use, dry and wet processing, good wear resistance with good operational reliability, medium cutting speeds, also for poor operating conditions |
| U | 9145 | TiCN | PVD coating, very tough grade, universal use, 1. Optional for processing in group M and P with heavily interrupted cut. Wet and dry processing, low to medium cutting speeds, combined with good wear resistance and toughness, for operations with higher mechanical load on the cutting edge |

**Carbide, uncoated**

| | | | |
|---|---|---|---|
| N | 9120 | Ultra-fine grain | uncoated, main application area is in group N, highly polished to prevent edge build-up |

**Geometries**

| | | |
|---|---|---|
| F | = | Clamping stage for finishing - easy cutting |
| M | = | Chip breaker for medium machining - universal application |
| R | = | Chip breaker for roughing |
| AL | = | Chip breaker for machining non-ferrous metals, brass, copper alloys and plastics |
| VA | = | Chip breaker for machining stainless materials and super alloys |

## Through Coolant 45deg Approach Face Mills – SEMT 09T3...

**Design:** Double positive shank milling tool, low vibration action due to strong positive cutting geometry, tool holder nickel-plated.
**Supplied without indexable inserts, without screwdriver.**

**Application:** For universal use in almost all materials, for easy to medium machining, workpiece surfaces up to Ra 0.8. Problem-solver for materials of the M stainless and S super alloy, machines with low power and workpieces which tend to vibrate.

DIN 1835 B

## Face milling cutter 45° with inner cooling (screw clamping)

**Design:** Easy cutting face milling cutter, low-vibration operation thanks to uneven pitch, tool carrier nickel-plated.
**Supplied without indexable inserts, without screwdriver.**

**Application:** Can be used for roughing and finishing in all materials. Compatible also with SEKN/SEKR.

## Angular milling head 90° with inner cooling

**Design:** Angular milling head 90°, Doubly positive milling cutter, low-vibration operation thanks to very positive cutting edge geometry, tool carrier nickel-plated.
**Supplied without indexable inserts, without screwdriver.**

**Application:** Square shoulder milling cutters, universal application options, for easy to medium processing at high feed speed rates (due to increased number of teeth). Best results with stainless steel, good surface finish.

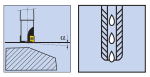
## 90deg Approach Aluminium Facemill with Through Coolant – VCGT 2205...

**Design:** Shell-type milling cutter 90°, tool carrier nickel-plated.

**Supplied without indexable inserts, without screwdriver.**

**Application:** Suitable for corner, face and slot cutting as well as for angled plunge cutting. For universal use in tool- and mould-making.



| Order No. | Ø D mm | 2999 | Number of cutting edges | Dimensions Ø d H7 mm | Dimensions L mm | Dimensions Ø $d_1$ mm | Cutting depth ap/max. mm | IC | Indexable insert |

## 90deg Approach Aluminium Screw In Cutter with Through Coolant – VCGT 2205...

**Design:** Copy mill 90° (screw-in cutter), tool carrier nickel-plated.
**Supplied without indexable inserts, without screwdriver.**

**Application:** Suitable for corner, face and slot cutting as well as for angled plunge cutting. For universal use in tool- and mould-making.

**Note:** Extension for screw-in cutter see 3/40, 3/57, 3/66.

## Front and Back Chamfer Cutter 45deg with Through Coolant – SOMT 09T3...

**Design:** Chamfer and milling countersink with cylindrical shank, tool carrier nickel-plated.
**Supplied without indexable inserts, without screwdriver.**

**Application:** For universal use in milling chamfers, indentations and deburring at a 45 ° angle **as well as for forward and backward deburring.**

## Long Edge Chamfer Cutter – 15/30/45/60/75deg – XPHT 16...

**Design:** Solid chamfer cutter, ensures quiet run and low-vibration machining due to very positive cutting geometry, tool carrier nickel-plated.
For universal rough milling.
**Supplied without indexable inserts, without screwdriver.**

**Application:** For chamfering and edge-milling.

**Note:** Sturdy chamfer cutter for smooth running and low-vibration stock removal. This creates a good to excellent surface quality.

|---|---|---|---|---|
| 2999 5600 – 2999 5785 | Ø 15–40 mm | XPET 05/06/07/09/11/12...<br>SCET 05/06/07/09/12 | 2/187 | ● |

## Notes on using Indexable Insert Drills

Using indexing insert drills (short bore) achieves a multiplicity of productivity and cost savings with HSS drills. The optimum choice of carbide together with the right geometry and feed rate guarantees controlled chip formation.

**Requirements for good bore results as follows:**

- **Stable clamping**
- **Short overhangs, compact drill chuck**
- **Correct tool positioning for machine spindle**
- **Use of cooling oil or compressed air at sufficient pressure (chip removal)**

- **Warning**
  **With drill withdrawal a disc drops.**
  **Risk of accident with rotating workpieces.**
  **Please take precautions!**

**Application**

- **Universally applicable WP drill for use on lathes, drills and milling centres.**
- **Can be used as a stationary and rotating tool, both horizontally and vertically**
- **Cylindrical shank with face according to ISO 9766**
- **Bore depths up to 3 x D should not be exceeded**
- **With concave/oblique surfaces the feed rate should be reduced by ca. 30–50 %.**

**Advantages**

- **Drilling with indexable inserts - economic production of bores or through-holes and blind holes**
- **Very good machining performance with high cutting speeds and feed rates**
- **No running off of the bore axle**
- **Direction precise drilling**

Wear resistance

| | | | P | M | K | N | S | H |
|---|---|---|---|---|---|---|---|---|
| 01 | | Finishing and fine-spindles at high cutting speeds, best machining results, no vibrations | | | | | | |
| 10 | | Drilling and copying at high cutting speeds, good machining results, with small to medium chip cross-cutting | | | | | | |
| 20 | | Drilling and copying at medium cutting speeds, for medium to slightly adverse chipping conditions | | | | | | |
| 30 | | Turning and facing at medium cutting speeds, and adverse chip conditions (break in cutting) | | | | | | |
| 40 | | Turning, grooving and parting at low to medium cutting speeds and very adverse working conditions (break in cutting) | | | | | | |
| 50 | | Turning and parting at very low cutting speeds, extremely adverse working conditions (severe breaks in cutting) | | | | | | |

Toughness

**Carbide, coated**

| | | | |
|---|---|---|---|
| PK | 9015 | $AL_2O_3$ | CVD/PVD multi-layer coating, main application area is in groups P and K, also possible in M group, for preparation and roughing work, continuous, slight interrupted cut, high cutting speeds |
| PMK | 9030 | TiCN | CVD coating, main application area is in groups P, M and K, S group also possible, for preparation and roughing work, continuous, and interrupted cut, medium to high cutting speeds |
| PMK | 9040 | TiCN | CVD coating, main application area is in groups P, M and K, S group also possible, for roughing work, adverse conditions, severe interrupted cut, low to medium cutting speeds |
| KNH | 9010 | TiCN | CVD coating, universal use for finishing in all groups, for operations with high thermal load, low to medium depth of cut, high cutting speeds in stable conditions |
| U | 9035 | TiCN | CVD coating, universal use in all groups, high wear resistance, adverse conditions, medium cutting speeds |
| VA | 9040 | TiCN | CVD coating, main application area in groups M and P, S also possible. For finishing in medium processing of VA steels, standard interrupted cut, medium cutting speeds. |
| | | | Medium processing VA geometry for processing stainless steel. lightweight cutting. Cuts easily |
| | | | Also 1. option with very tough steels. |

**Carbide, uncoated**

| | | |
|---|---|---|
| N | 9020 | Ultra-fine grain uncoated, main application area group N, fine and finest processing of groups M and S, in stable conditions, low to medium depth of cut, highly polished to prevent edge build-up |

## Turning indexable inserts – Geometry and Applications

| | | | |
|---|---|---|---|
| CCGT, DCGT, TCGT, VCGT | NF Processing | AL | Geometry for positive indexable inserts, specially designed for processing aluminium alloys, synthetics and copper alloys. Chip-angle ground. Indexable inserts are highly polished to prevent edge build-up. |
| CCMT, DCMT, TCMT, VCMT, CNMG, DNMG, SNMG, TNMG, WNMG | Finishing | F | Geometry for finishing steel, cast and rustproof workpieces. |
| CCMT, DCMT, TCMT, VBMT, VCMT, CNMG, DNMG, SNMG, TNMG, WNMG, KNUX | Semi-roughing | M | Geometry for semi roughing, versatile application. The first choice for finishing cast and forged parts with low oversize. |
| CNMG, DNMG, SNMG, TNMG, WNMG | Roughing | R | Geometry for roughing in semi roughing and pipe processing. Suitable for high feed rates and cutting depths. |
| CNMG, DNMG, WNMG, ER-SI/EL-SI | Roughing-finishing | EC | = **Easy-Cut** Geometry for roughing-finishing and semi roughing, particularly for carbon steels, stainless steel and alloys of Ni, Co, Fe and Ti. Particularly suited to long, thin workpieces (axles) with low cutting force (no vibrations and chatter marks). |
| WNMG | Finishing | WF | = **Luffing, fine processing.** Geometry for fine turning and finishing in steel and cast work and rustproof workpieces, with double feed rate as with chip breaker F- and 15–20 % higher cut pressure. |
| CNMG, WNMG | Semi-roughing | WM | = **Luffing, medium.** Geometry for finishing to semi roughing in steel and cast work, with double feed rate as with chip breaker F- and 15–20 % higher cut pressure. |

## Grooving indexable inserts – Geometries and Applications

| | | |
|---|---|---|
| LFMX | N – F | Multi-purpose geometry, light cut, the first choice for P, M and S ranges, also with interrupted cut. |
| LFMX | N – M | Multi-purpose geometry, light cut, for P and K ranges with raised feed rate, with light, interrupted cut. |
| LFMX | SR/SL-SM | Multi-purpose geometry, light cut, the first choice for P, M and S ranges, also with interrupted cut, with 8° face slant - right / left design, reduces chips on the workpiece. |
| LCMF | F | Geometry for grooving and longitudinal turning in P, M and K ranges. |
| LCMF | MP | Geometry for grooving and copy turning in P, M and K ranges. |

* R-EC for clamping holder = right-hand version
** L-EC for clamping holder = left-hand version

(W286)

Δ Can only be supplied as a whole packaging unit.

## Toolholders 93deg for Negative Inserts – DNMG 1104.../1506...

**Design:** Clamping holder for inserts 0° negative, toggle lever tension, tool carrier nickel-plated.
**Supplied without indexable inserts, without screwdriver.**

**Application:** For straight and copy turning.

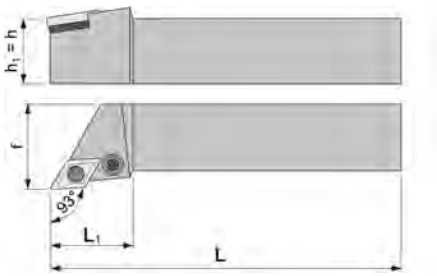

**Fig.: Right-hand version**

## Threading – Technical Information

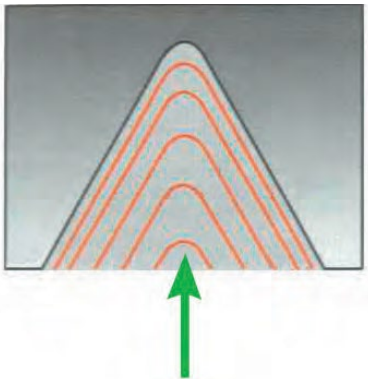
**60° ISO metric** **solid profile for inner and outer processing**
**55° Whitworth** **solid profile for inner and outer processing**

With solid profile turning plates the inner and outer diameters turn together, so that all parts are concentric. Burr-free profiles are achieved, exactly to standard, in one operation.

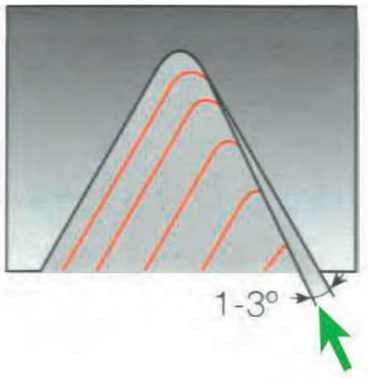
**Number of cuts (passes) and delivery methods**

| Gradient mm | 0.50 | 0.75 | 1.00 | 1.25 | 1.50 | 1.75 | 2.00 | 2.50 | 3.00 |
|---|---|---|---|---|---|---|---|---|---|
| Threads/Inch | 48 | 32 | 24 | 20 | 16 | 14 | 12 | 10 | 8 |
| Number/passes | 4–6 | 4–7 | 4–8 | 5–9 | 6–10 | 7–12 | 7–12 | 8–14 | 9–16 |

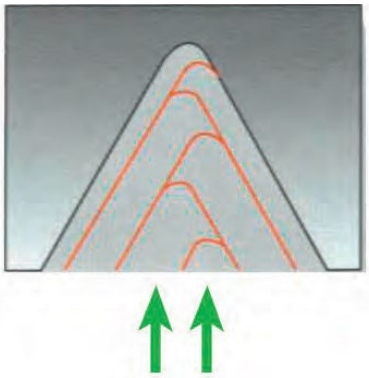
**Radial feed**



**Along the edge**



**Reciprocal feed**



## Name and formulas

**RPM**

$$n = \frac{Vc \cdot 1000}{\pi \cdot D} \quad (min^{-1})$$

**Gradient**

$P_h = P \cdot$ number of turns (min)

**Cutting speed**

$$Vc = \frac{\pi \cdot D \cdot n}{1000} \quad (m/min)$$

**Tilt angle**

$$\lambda = \arctan \frac{P_h}{D_2 \cdot \pi} \quad (°)$$

**Path speed**

$$V_f = \frac{n \cdot P_h}{1000} \quad (m/min)$$

**Conversion inches to metric**

$$TPI = \frac{25.4}{P}$$

| | | |
|---|---|---|
| D | = workpiece diameter | (mm) |
| $D_2$ | = edge diameter (nominal diameter) | (mm) |
| n | = speed | ($min^{-1}$) |
| P | = pitch | (mm) |
| $P_h$ | = gradient | (mm) |
| $V_f$ | = path speed | (m/min) |
| TPI | = turn per inch | |
| Vc | = cutting speed | (m/min) |
| λ | = tilt angle | (°) |

## Shim Selection Table

| Tilt angle λ | | Positive | | | | | Negative | | for Milling insert |
|---|---|---|---|---|---|---|---|---|---|
| | | 4.5° | 3.5° | 2.5° | 1.5° | 0.5° | –0.5° | –1.5° | TN16.. ... ZZ |

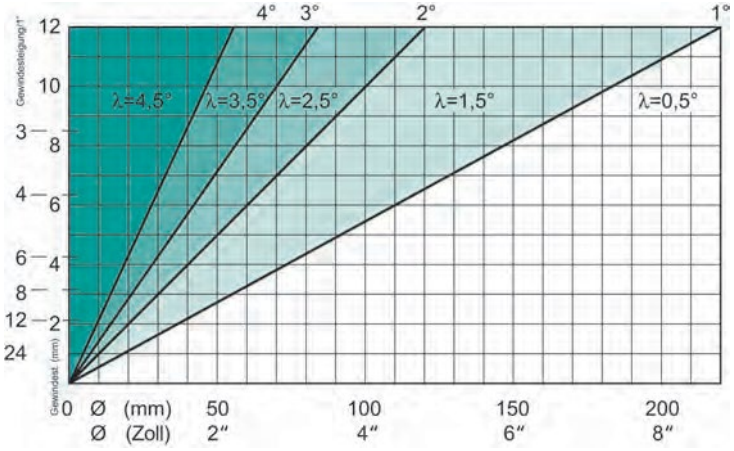
| SER .... .22 | SIL .... .22 | PE22+4.5 | PE22+3.5 | PE22+2.5 | PE22+1.5* | PE22+0.5 | PE22–0.5 | PE22–1.5 | – |
| SEL .... .22 | SIR .22 | PI22+4.5 | PI22+3.5 | PI22+2.5 | PI22+1.5* | PI22+0.5 | PI22–0.5 | PI22–1.5 | – |

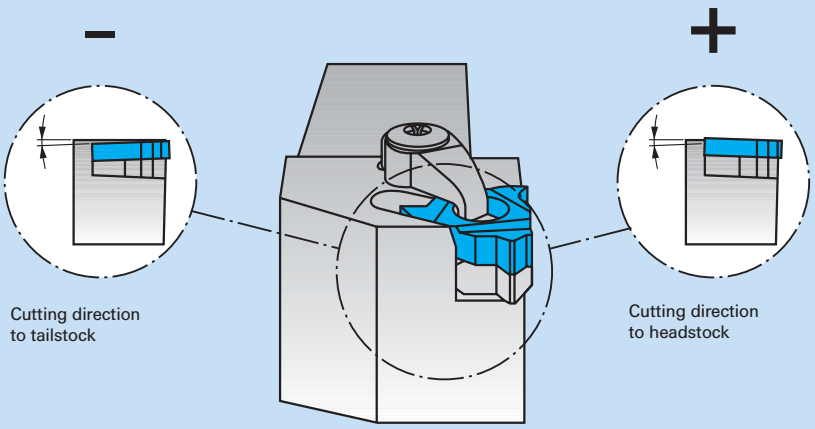
**Remarks:** **All tool holders are firmly equipped with a tilt angle λ = 1.5°.**
**The helix angle can be changed on the support plate - see table and diagram.**

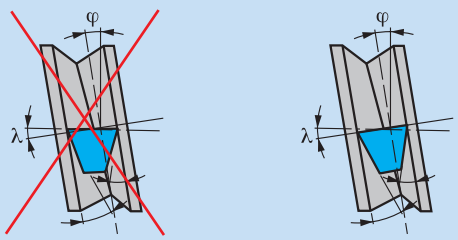
## Shim Selection Chart



## Production method

**Attention:**
If the cutting direction shows to the tailstock, the base plate must be changed.



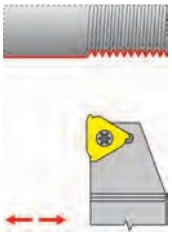


To achieve highest profile precision and even wear, the slope angle (λ) of the indexable insert must correspond exactly with the lead angle (φ) of the thread.

## External Threading Toolholders

**Design:** Thread turning clamping holder, incl. supporting plate, helix angle 1.5°, screw clamping.
**Supplied without indexable inserts, without screwdriver.**

**Application:** External thread – right/left.



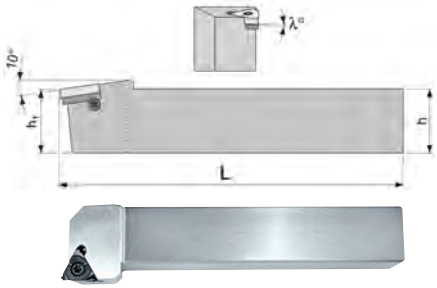


**Fig.: Right-hand version**

## Clamping holder for external parting

**Design:** Prism clamping gives high-precision positioning. Optimised plate fitting counters high axial forces from both directions.

**Supplied without indexable inserts, without screwdriver.**

**Application:** grooving and cut-off, form and free cutting.

## Turning - cutting data

### Name and formulas

**RPM**

$$n = \frac{Vc \cdot 1000}{\pi \cdot D} \quad (U/min)$$

**Cutting speed**

$$Vc = \frac{n \cdot \pi \cdot D}{1000} \quad (m/min)$$

| | | |
|---|---|---|
| ap = | depth of cut | (mm) |
| D = | workpiece diameter | (mm) |
| f = | feed | (mm/rev.) |
| n = | speed | (rev/min) |
| Vc = | cutting speed | (m/min) |
| κ = | setting angle | (°) |

## Milling – cutting data

### Name and formulas

**RPM**

$$n = \frac{Vc \cdot 1000}{\pi \cdot D_c} \quad (U/min)$$

**Cutting speed**

$$Vc = \frac{n \cdot \pi \cdot D_c}{1000} \quad (m/min)$$

**Feed rate**

$$V_f = n \cdot z_n \cdot f_z \quad (mm/min)$$
$$V_f = n \cdot z_c \cdot f_z \quad (mm/min)$$

**Feed/revolution**

$$f = z_n \cdot f_z \quad (mm/U)$$
$$f = z_c \cdot f_z \quad (mm/U)$$

**Cutting speed and revolutions copy milling**

$$Vc = \frac{n \cdot \pi \cdot D_w}{1000} \quad (m/min)$$

$$n = \frac{Vc \cdot 1000}{\pi \cdot D_w} \quad (U/min)$$

$$D_w = 2 \cdot \sqrt{ap\,(D_c - ap)} \quad (mm)$$

| | | |
|---|---|---|
| $a_e$ = | radial cut depth (contact width) | (mm) |
| ap = | axial cut depth | (mm) |
| $D_c$ = | milling diameter | (mm) |
| f = | feed/rev | (mm/rev) |
| $f_z$ = | feed/tooth | (mm/tooth) |
| $z_c$ = | effective number of teeth for calculating feed. | |
| n = | speed | (rev/min) |
| Vc = | cutting speed | (m/min) |
| $V_f$ = | feed rate | (mm/min) |

## 9. Cut direction

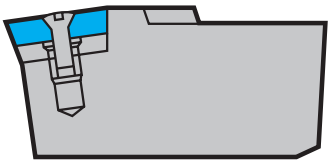
Information not obligatory

## 10. Inner description

| S | E | R | 25 | 25 | M | 16 | |
|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |

## 1. Clamp system

S



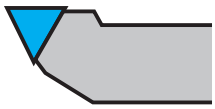
Screw

## 2. Outer/inner

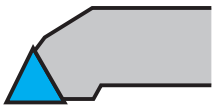
E = outer
I = inner

## 3. Cut direction

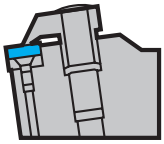
L



R

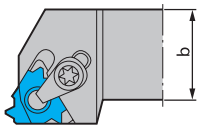


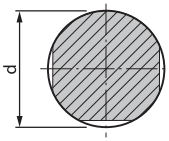
## 4. Shank height



25 = 25 mm
32 = 32 mm

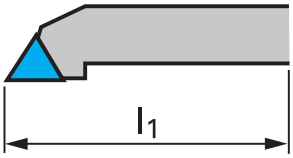
## 5. Shank width/diameter





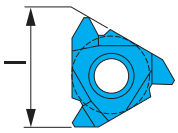
12 = 12 mm
20 = 20 mm
25 = 25 mm

## 6. Tool length



H = 100 mm
K = 125 mm
L = 140 mm
M = 150 mm
P = 170 mm
Q = 180 mm
R = 200 mm
S = 250 mm
T = 300 mm
U = 350 mm
V = 400 mm

## 7. Cutting edge length



Example:
Cutting edge length = 16.5 mm
Symbol = 16

## 8. Additional Information

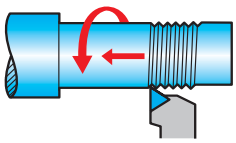
Inclination angle κκ
0 = inclination angle λ 0°
1 = inclination angle λ 1°

## Machining methods

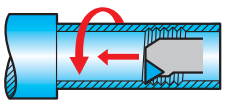
Cut direction option depends on:
- Workpiece (outer or inner thread, right or left thread)
- Machine (right or left tool)

### Cutting direction to the headstock

**Right thread - right tool**

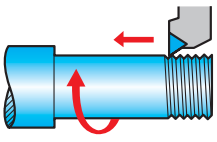


**ER**
**First option**

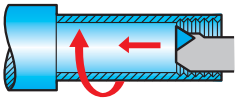


**IR**

**Left thread - left tool**



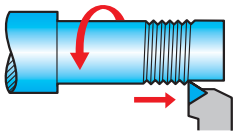
**EL**
**First option**



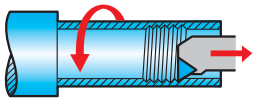
**IL**

### Cutting direction towards tailstock

**Left thread - right tool**

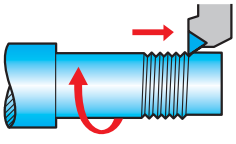


**ER**

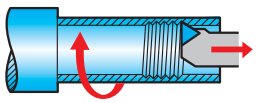


**IR**
**First option**

**Right thread - left tool**



**EL**



**IL**
**First option**

## Thread cutting - cutting data

### Name and formulas

**RPM**

$$n = \frac{Vc \cdot 1000}{\pi \cdot D_c} \quad (min^{-1})$$

**Cutting speed**

$$c = \frac{\pi \cdot D \cdot n}{1000} \quad (m/min)$$

**Path speed**

$$V_f = \frac{n \cdot P_h}{1000} \quad (m/min)$$

**Gradient**

$$P_h = P \cdot \text{Anzahl der Gänge (min)}$$

**Tilt angle**

$$\lambda = \arctan \frac{P_h}{D_2 \cdot \pi} \quad (°)$$

**Conversion inches to metric**

$$TPI = \frac{25{,}4}{P}$$

| | | |
|---|---|---|
| D | = workpiece diameter | (mm) |
| $D_2$ | = edge diameter (nominal diameter) | (mm) |
| n | = speed | ($min^{-1}$) |
| P | = pitch | (mm) |
| $P_h$ | = gradient | (mm) |
| $V_f$ | = path speed | (m/min) |
| TPI | = turn per inch | |
| Vc | = cutting speed | (m/min) |
| λ | = inclination angle | (°) |

| | |
|---|---|
| **Form A:** | **Without through bore - no internal coolant feed.** |
| Form A |  |
| **Form AD:** | With central through bore - internal coolant addition with retention stud bolt. |
| Form AD |  |
| **Form AD/B:** | With central through bore (Form AD) and additional lateral coolant addition via the collar (Form B). |
| Form AD/B |  |

## Tool holders with polygon shaft ISO 26623

The spindle interface ISO 26623 is a tool clamping system with utmost precision and very common, particularly for multitask machines (turning-milling centres).

ISO 26623

PSC

## Three-jaw scroll chuck

**Design: With cylindrical mounting recess DIN 6350, Form A.**
Body made from cast or steel with one-piece jaws and scroll, centric clamping. With cylindrical centring mount for spindle heads.

**Application:** For use on lathes, rotary tables, indexing devices etc., where high clamping forces and high concentricity and accurate repetition are required.

**Scope of delivery:** Three-jaw lathe chuck with chuck key and mounting screws.

**Note:** Replacement jaws are found on 📖 3/7.

**3000** With a set of one-piece reversible jaws.

**3002** With a set of one-piece reversible jaws.

**3004** With one set of inward and outward stepped jaws.

## Three-jaw scroll chuck ZS

**Design: With short taper mount DIN 55029 with stud bolt for Camlock.** Body made from steel with one-piece jaws and scroll, centric clamping.

**Application:** For use on lathes, rotary tables, indexing devices etc., where high clamping forces and high concentricity and accurate repetition are required.

**Scope of delivery:** Three-jaw lathe chuck with chuck key and mounting screws, with one set of outward-stepped jaws (drilling jaws) and one set of inward-stepped jaws (rotary jaws).

**Note:** Replacement jaws are found on 📖 3/7.

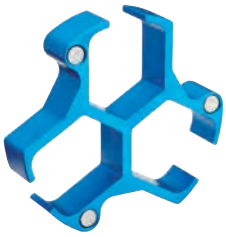
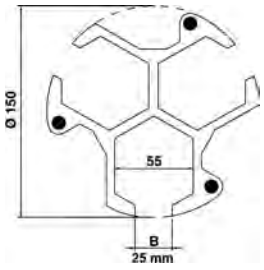
## Workpiece stop POSISTOP

**Design:** Made of aluminium, with 3 magnets incorporated in the stop, for easy attachment to the lathe chuck body and ground contact surfaces.
Jaw width: 25-55 mm (extendable by removing the lugs).

**Application:** For clamping short parts with a workpiece diameter of 15-150 mm.





| Order No. | Size/height mm | 3083 skantek | Jaw width mm | Diameter mm |

## Jaw hollow-out fixture for three-jaw chuck

**Design:** Lightweight construction.

**Application:** For turning unhardened jaws and for grinding hardened base and top jaws. Jaws reversible and infinitely adjustable. The fixture is tensioned in a three-jaw chuck. The adjustment ring on the hollow-out fixture allows the jaws to be moved inwards and outwards as required. The jaws are placed in the bores of the top jaws on the lathe chuck and the chuck is tensioned. The chuck can be set in the position that it will assume when processing workpieces in just a few seconds (pre-tensioning). The cranked clamping surfaces of the chuck jaws are then tensioned form-fit and perfectly concentric.

## Key bar three-jaw lathe chuck DURO-T

**Design: With short taper DIN 55027, with stud bolt and collar nut.** Chuck body completely surface-hardened and balanced. Jaws in the chuck ground concentrically Radial and axial run-out tolerances only half of the permitted values prescribed by DIN 69386/I. With quick jaw replacement system, visual marking for quick jaw replacement and jaw locking. High corrosion protection and splash-water edge on the outer contour. Good lubrication options of the highly stressed sliding surfaces.

**Application:** For lathe applications, where high clamping forces and high concentricity and accurate repetition are required.

**Scope of delivery:** With base jaws and reversible top jaws as well as safety key.

## Quick-change tool posts for lathes

NEW

ORIGINAL MULTI SUISSE

**Design:** The quick-change tool posts offer the advantage of unlimited versatility. They allow for tools to be changed considerably faster than with a four-way tool holder, and guarantee a repetition accuracy of less than 0.01 mm over many years. The ground serration in the central body and in the tool holders allow 40 different clamping positions. The tool holder head can receive any number of tool cartridges containing turning tools and drill steels.

**Application:** The quick-change tool posts are suitable for use on conventional and CNC lathes with manual tool change.

**General note:** VDI tool holders for CNC lathes consist of tempered steel with a strength class of approx. 900 N/mm², hardness of 56 ±2 HRC and a hardness depth of min. 0.5 mm. In addition, all VDI tool holders have a cylinder shank h6 with internal coolant supply and adjustable ball slot nozzles.

Shank and supporting face hardened and ground, with coolant transfer hole.

Other designs on request.

You can also find all illustrations, technical drawings and dimensions online at **www.format-quality.com/en.**

## VDI square blank A1

**Design: DIN 69 880,** finish hardened and ground, coolant transfer hole, remainder soft. Without holding fixture.

**Application:** For production of special designs.

## Form E2S for boring bars - slotted

**Design:** Tool holder for drill bars also with internal cooling.

**Clamping** indirect.

Type A: bored shank.
Type B: full shank*.

**Application:** For boring bars.

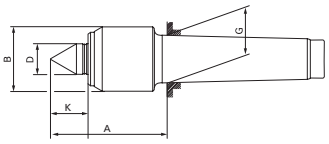
## Revolving centre punch - SLIM normal

**Design:** Body and tip drop forged, hardened and ground. Moving point is regrindable for several times and shank-mounted, with **tip angle 60°.** The precision bearing is protected from dirt and coolant by the special lip seal. The shank is ground, with hole for easy dismantling. The small housing diameter avoids obstructions for slide rests, tool posts and turning tools. The radial load carrying capacity is regarded as equal to the other constructions. The axial load carrying capacity is less due to its constructional characteristics.



**Application:** For all turning operations, especially machining workpieces needing a small head diameter size.

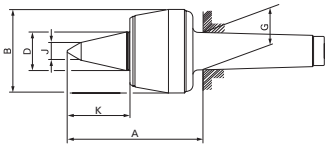
## Revolving centre punch - HVL PRO extended

**Design:** Body and tip drop forged, hardened and ground. Moving point is regrindable for several times and shank-mounted, with **tip angle 60°.** The precision bearing is protected from dirt and coolant by the special lip seal. The shank is ground, with hole for easy dismantling. The permissible load is reduced by the extended moving point. With short projection length and low-vibration running.



**Application:** For precision turning and roughing, can be universally used on all types of lathes. **Particularly suitable for copy turning.** The extended tip enables unobstructed movement of the sliding rests.

## Revolving tailstock centre - AC-VL CONTROL extended

**Design:** Body and tip drop forged, hardened and ground. Moving point is regrindable for several times and shank-mounted, **with low 60° VL tip angle deflection.** The precision bearing is protected from dirt and coolant by the special lip seal. The shank is ground, with hole for easy dismantling.
Clamping force can be directly read in daN from the manometer. Pressure equalisation is done via disc springs.

**Application:** Particularly suitable as tail centre to face drivers, to determine and maintain the clamping force as well as to clamp long, slim workpieces to prevent deflections.

## Revolving tailstock centres with interchangeable inserts - FLEX

**Design:** Fully hardened and ground. Supplied in wooden case.

**Application:** Versatile by simple and fast replacement of the centring inserts using the lifter.

**Scope of delivery:** Revolving lathe centre with 3 inserts (60°, 90° and 60° VL), 1 hollow body 60°, 2 hollow bodies for non-centred workpieces (Form A and B) and 1 lifter.

**Note:** Individual inserts and hollow bodies upon request.

## Constant face driver range of products CoA

**Design:** CoA small range of products, clamping diameter 12–50 mm, turning range 13–100 mm, hydraulic. Supplied in wooden case.

**Application:** For efficient turning of workpieces over their entire length in one setup with high accuracy. Designed based on the modular principle, therefore universal exchange of driving plates and centring points possible. Hydraulic or mechanic pressure equalisation results in uniform clamping force also in case of uneven workpiece faces. Workpiece face longitudinal stop by spring-loaded centring point.

**Scope of delivery:** Constant face driver range of products with 1 base body, 4 driving cutters, clamping diameters 12 – 20 – 32 – 50 mm and 2 centring points, diameter A = 6 + 12 mm.

## Constant face driver range of products CoE

**Design:** CoE range of products, clamping diameter 12–50 mm, turning range 13–100 mm. Supplied in wooden case.

**Application:** Ideally suitable for efficient turning of workpieces over their entire length in one setup with high accuracy. At the same time, a groove or serration can be milled. This can e.g. save changeover to a vice which translates into savings in time and costs. Designed based on the modular principle, therefore universal exchange of driving plates and centring points possible. Mechanic pressure equalisation results in uniform clamping force also in case of uneven workpiece faces. Workpiece face longitudinal stop by spring-loaded centring point.

**Scope of delivery:** Constant face driver range of products with 1 base body, 4 driving plates, clamping diameters 12 – 20, 32 and 50 mm as well as 3 centring points, diameter 12, 20 and 32-50 mm.

* B 16 shortened by 2.5 mm.

## Chuck, with radial locking

**Design: Through-hole for clockwise and anti-clockwise rotation,** with retaining ring. Plastic design, with hexagon for assembling and disassembling. Keyless, impact resistant quick-action chuck, self reclamping during drilling work, no additional locking required, very ergonomic and user-friendly, equipped with impact guard. Size 13 with carbide inserts in the clamping jaws.

**Application:** For screwing, drilling and especially impact drilling using cordless and corded drills.

## High-performance quick-action chuck

ALBRECHT Precision Chucks

**3435** **Design:** Keyless and self-clamping in precision design for clockwise rotation.
**High concentricity** (based on DIN ISO 10888) for more precise bores and a longer tool service life.
All wear parts are case-hardened, ground and manufactured compatibly to each other as well as interchangeable.

**Application:** For high endurance stress as well as precision work on drills, drilling machines and special drilling units.

**Note:** All component parts of the chucks are available as spare parts.

**3438** **Design:** Keyless and self-clamping in precision design **with diamond-coated chuck jaws** for clockwise rotation.
**High concentricity** (based on DIN ISO 10888) for more precise bores and a longer tool service life.
All wear parts are case-hardened, ground and manufactured compatibly to each other as well as interchangeable.

**Application:** For easy and force-fit clamping of solid carbide drill bits and HSS-drill bits with fully hardened shank.

**Note:** Further sizes available upon request.

## High-performance quick-action chuck with clamping force safety device

ALBRECHT Precision Chucks

**Design:** Key-less and self-tightening precision design **with safety guard.**
**High concentricity** (based on DIN ISO 10888) for more precise bores and a longer tool service life.
All wear parts are case-hardened, ground and manufactured compatibly to each other as well as interchangeable.

**Application:** For use on CNC machines and machining centres.

**Note:** Due to the keyless lock on the set collar, the chuck's clamping force safety device prevents slacking of tension on the chuck when there is abrupt machine speed reduction. The function of the self-tightening stepless action nevertheless remains effective. That way this Albrecht system maintains the maximum clamping force in each case.

| Order No. | Clamping range mm | 3441 ALBRECHT | Morse taper | Chuck Ø mm | Open length mm | Closed length mm |

* B 18 s (shortened by 7.0 mm).

## High-performance quick-action chuck with mounting shank

**Design:** Keyless and self-clamping **with mounting shank (one-piece).**
Chuck and mounting shank form **one unit.**
Optimal stability and higher concentricity is achieved by compact design (based on DIN ISO 10888).

**Application:** For high endurance stress as well as precision work on drills, drilling machines and special drilling units.

**Note:** The advantage over a two-part system is the length shorter by a total of 21 mm and thus is advantageous for machines with a small working area. Available with diamond-coated jaws on request.

## Fine drilling aid

**Design:** Small drilling jig with spring balancer.

**Application:** For "Albrecht" high-performance chuck take-up; 0–1.5 mm (Order No. 3435 0001), for fine boring in the tool and jig construction. Feed is manually performed by pulling the guide ring in order to process extremely small bores with utmost sensitivity. A spring balancer moves the chuck automatically back into the home position.

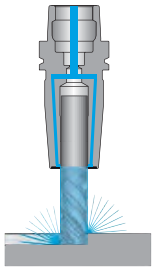
# COOL FLASH

## Cooling taken to extremes

According to the motto "Making the Good Even Better", HAIMER has developed the new **COOL FLASH SYSTEM** for shrink-fit holders on the basis of the existing Cool-Jet. The coolant lubricant emerges through several slots, slides along the cutter and cools to the cutting edge of the tool!



HAIMER
Qualität gewinnt.

**COOL-FLASH advantages:**

- Optimum jet guidance to the cutting edge
- Up to 100% longer life
- No more balls of chips on the tool
- Even at high speeds
- Optimum spinning! No longer out of balance! No disturbing contours!
- Low cost and subsequent installation is possible

# SAFE-LOCK™

## The seat belt for your tools

In high-performance cutting (HPC) it can happen that the tool is pulled out of the chuck. This is due to a slow micro creep motion. It occurs during machining with high torque and high attractive forces. Even chucks with extremely high holding force cannot prevent micro creep. This can turn high quality workpieces into scrap. The **SAFE-LOCK™**-system provides a remedy. Driver elements in the chuck engage in grooves on tool shank. In addition to the frictional clamping forces of the shrink fit chuck, the tool is held positively. Thus, micro-creep is effectively prevented and your tool holds.

HAIMER
Qualität gewinnt.

**Safe-Lock™ advantages:**

- For high-performance clamping
- Highly accurate tension due to shrink technology
- High torque due to positive transport technique
- No loss in accuracy
- No stripping of tool
- No damage to workpiece and machine
- The groove at the milling shaft is designed in a manner that the milling tool is pulled into the chuck (depending on the turning direction)
- Patent registered: licensing possible

## Weldon system surface clamping chuck

**Design: DIN 69 871, Form AD/B,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254.

Taper angle: Tolerance AT3
Taper surface roughness: Ra < 0.001 mm
Bore tolerance: H5
Balancing quality: G6.3 15000 min⁻¹
Concentricity: <0.01 mm
Hardened 58 ± 2HRC

**Application:** For clamping milling cutters with cylindrical shank and lateral driving plane in accordance with DIN 1835-B and DIN 6535-HB.

**Scope of delivery:** Face chuck with clamping screw.

## Precision face chuck system Weldon

**Design: DIN 69 871, Form AD/B,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Bore tolerance: H5.
Balancing quality: G2.5 22000 min⁻¹.
Concentricity: < 0.003 mm.
Hardened 60 -2 HRC.

**Application:** For clamping milling cutters with cylindrical shank and lateral driving plane in accordance with DIN 1835-B and DIN 6535-HB.

**Scope of delivery:** Face chuck with clamping screw.

## Mini collet chuck ER

**Design:** These cylindrical collet chuck holder for collets to DIN 6499 (ER) have a **lateral clamping surface,** an extremely slim design and are used as boring bar milling cutters. The holder is supplied with standard clamping nut (mini nut).

**Application:** For extension of tools for cylindrical shanks to DIN 1835 B+E as well as DIN 6535 HB. Slim design.

**Scope of delivery:** Collet chuck complete with clamping nut.

**Note:** Tensioning nut Type M, see 📖 3/103, collets, see 📖 3/97.

**Design: DIN 69871, Form AD/B,** made of alloy case-hardened steel, with a core tensile strength of approx. 950 N/mm² and a hardness depth of min. 0.5 mm. Taper according to DIN 254.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Concentricity: < 0.01 mm.
Balancing quality: G6.3 15000 min⁻¹.
Hardened 58 ±2 HRC.

**Application:** To nest tools with cylindrical shank and lateral driving plane in accordance with DIN 1835-B and DIN 6353 HB.

**Scope of delivery:** Collet chuck complete with clamping nut.

## Precision collet chuck Type ER

NEW

**Design: DIN 69871, Form AD,** made of alloy case-hardened steel. **All functional surfaces machined** and **guaranteed quality** thanks to double 100 % control.

Taper angle: Tolerance AT3.
Taper surface roughness: Ra < 0.001 mm.
Balancing quality: G2.5 18000 min$^{-1}$.
Concentricity: < 0.003 mm.
Hardened 60 -2 HRC.

**Application:** For clamping tools with cylindrical shank in collets to DIN 6499.

**Scope of delivery:** Collet chuck complete with clamping nut.
